Nonlinear Diffusion Equations and Curvature Conditions in Metric Measure Spaces Luigi

Ambrosio, Andrea Mondino, Giuseppe Savaré, 2020-02-13 The aim of this paper is to provide new characterizations of the curvature dimension condition in the context of metric measure spaces (X, d, m) . On the geometric side, the authors' new approach takes into account suitable weighted action functionals which provide the natural modulus of K -convexity when one investigates the convexity properties of N -dimensional entropies. On the side of diffusion semigroups and evolution variational inequalities, the authors' new approach uses the nonlinear diffusion semigroup induced by the N -dimensional entropy, in place of the heat flow. Under suitable assumptions (most notably the quadraticity of Cheeger's energy relative to the metric measure structure) both approaches are shown

to be equivalent to the strong $CD_{\square}(K,N)$ condition of Bacher-Sturm.

Theory of Plates and Shells Christian Mittelstedt,2023-06-18 This book deals with the analysis of plates and shells and is divided into four sections. After briefly introducing the basics of elasticity theory and the energy methods of elastostatics in the first section, the second section is devoted to the statics of disk structures. In addition to isotropic disks in Cartesian and polar coordinates, approximation methods and anisotropic disks are also discussed. The following third section deals with plate structures, covering plates in Cartesian and polar coordinates, and also discussing approximation methods and higher-order plate theories. Other chapters in this section discuss plate buckling as well as geometric nonlinear analysis and laminated plates. The fourth and final section of this book is devoted to shells, i.e., curved thin structures, following the common division into membrane theory on the one hand and bending theory on the other hand. This book is intended for students at universities, but also for engineers in practice and researchers in engineering science.

Blacksad - Volume 4 - Silent Hell Juan Diaz Canales,2016-07-20T00:00:00+02:00 It's 1950s New Orleans, and Mardi Gras is in full swing. Thanks to Weekly, a Jazz producer going by the name of Faust sets up a meeting with Blacksad. Faust asks Blacksad if he could look into the disappearance of Sebastian, one of his musicians. There's been no sign of the pianist for months, and his absence is jeopardizing the both the music label and the star's private life. Faust fears that Sebastian has, once again, turned to drugs. The whole affair is rendered even more urgent now that Faust has learned that he's suffering from cancer. Blacksad takes on the mission and discovers little by little that Faust hasn't told him the whole story. He realizes that he is also being manipulated, but determines none the less to find Sebastian and try and understand the reasons for his disappearance. Little does he know at this point that this will be his most testing mission yet, in more than one respect.

Digital Logic Design Guy Even,Moti Medina,2012-10-08 This textbook, based on the author's

fifteen years of teaching, is a complete teaching tool for turning students into logic designers in one semester. Each chapter describes new concepts, giving extensive applications and examples. Assuming no prior knowledge of discrete mathematics, the authors introduce all background in propositional logic, asymptotics, graphs, hardware and electronics. Important features of the presentation are:

- All material is presented in full detail. Every designed circuit is formally specified and implemented, the correctness of the implementation is proved, and the cost and delay are analyzed
- Algorithmic solutions are offered for logical simulation, computation of propagation delay and minimum clock period
- Connections are drawn from the physical analog world to the digital abstraction
- The language of graphs is used to describe formulas and circuits
- Hundreds of figures, examples and exercises enhance understanding. The extensive website (<http://www.eng.tau.ac.il/~guy/Even-Medina/>) includes teaching slides, links to Logisim and a DLX assembly simulator.

The Proteins Composition, Structure, and Function Hans Neurath, 2012-12-02 The Proteins: Composition, Structure, and Function, Second Edition, Volume IV covers the significant developments in understanding the relationships between the composition, structure, and function of proteins. This three-chapter volume deals first with the genetic determination of protein structure and with the effects of mutational alteration on the structure and function of proteins. A highly relevant aspect of this topic is the change in protein structure during evolution and cell development. The second chapter describes the basic structure of several glycoproteins, such as orosomucoid, egg albumin, and submaxillary gland glycoprotein. The third chapter highlights the features of composition and arrangement of the group protein, which impart the capacity to perform their physical function. This book is of value to organic chemists, biochemists, and researchers in the protein-related fields.

Certain Notions of Single-Valued Neutrosophic K-Algebras Muhammad Akram, Hina Gulzar, K. P. Shum, We apply the notion of single-valued neutrosophic sets to K-algebras. We develop the concept of single-valued neutrosophic K-subalgebras, and present some of their properties. Moreover, we study the behavior of single-valued neutrosophic K-subalgebras under homomorphism.

Computing with hp-ADAPTIVE FINITE ELEMENTS Leszek Demkowicz, 2006-10-25 Offering the only

existing finite element (FE) codes for Maxwell equations that support hp refinements on irregular meshes, *Computing with hp-ADAPTIVE FINITE ELEMENTS: Volume 1. One- and Two-Dimensional Elliptic and Maxwell Problems* presents 1D and 2D codes and automatic hp adaptivity. This self-contained source discusses the theory and implementation of hp-adaptive FE methods, focusing on projection-based interpolation and the corresponding hp-adaptive strategy. The book is split into three parts, progressing from simple to more advanced problems. Part I examines the hp elements for the standard 1D model elliptic problem. The author develops the variational formulation and explains the construction of FE basis functions. The book then introduces the 1D code (1Dhp) and automatic hp adaptivity. This first part ends with a study of a 1D wave propagation problem. In Part II, the book proceeds to 2D elliptic problems, discussing two model problems that are slightly beyond standard-level examples: 3D axisymmetric antenna problem for Maxwell equations (example of a complex-valued, indefinite problem) and 2D elasticity (example of an elliptic system). The author concludes with a presentation on infinite elements - one of the possible tools to solve exterior boundary-value problems. Part III focuses on 2D time-harmonic Maxwell equations. The book explains the construction of the hp edge elements and the fundamental de Rham diagram for the whole family of hp discretizations. Next, it explores the differences between the elliptic and Maxwell versions of the 2D code, including automatic hp adaptivity. Finally, the book presents 2D exterior (radiation and scattering) problems and sample solutions using coupled hp finite/infinite elements. In *Computing with hp-ADAPTIVE FINITE ELEMENTS*, the information provided, including many unpublished details, aids in solving elliptic and Maxwell problems.
