Racing Green: THE RAC MOTORING BOOK OF THE YEAR Kit Chapman, 2022-03-03 Racing Green is the story of how motorsport science has become smarter and more environmentally friendly, and how these developments on the track are changing the world. Motor racing is one of the world's most watched sports. In the United States alone, NASCAR has over 75 million fans and counting. It's also the most scientifically demanding sport on Earth, requiring a combination of peak physical and mental skill, world-class engineers and a constant drive for technological innovation. Racing Green explores the science that has been translated from racing to the road, from the early 19th century through to innovations such as electric cars and autonomous vehicles. The history of motor racing, both its glories and its tragedies, led to some of the most important modern developments we see in car design today. Just as the heartbreaking death of Dale Earnhardt at the Daytona 500 led NASCAR to introduce a new raceway barrier method, ideas pioneered during races – such as crush zones to crash helmets – have been incorporated into race car and track designs around the world. Cleaner technologies first trialed and improved in modern racing are also shaping our communities beyond the track, from the hidden aerodynamics in everything from your grocery aisle to Apple's new \$5 billion headquarters to a Porsche made from flax and tires made from dandelions. Through exclusive interviews with NASCAR's Research and Development Center, Formula 1 insiders, engineers, scientists and drivers, lifelong motorsport fan Kit Chapman goes behind the scenes of the current breakthroughs to show where motorsport is likely to

take us in the future, picking up extraordinary tales along the way, such as the Ohio State University's experimental electric car, the Buckeye Bullet, which broke the electric land speed record on the salt flats in Utah, hitting an astounding 340 mph, and the untold story of how motorsport used its unparalleled mechanical expertise to help during the COVID-19 pandemic. Racing Green is a mix of travelogue and historical retrospective, combining visits to the experts and discussing the science with retellings of real-life incidents that represent milestones in shaping the modern world

Two Billion Cars: Driving Toward Sustainability Daniel Sperling, Deborah Gordon, 2009-01-13 Today there are over a billion vehicles in the world, and within twenty years, the number will double, largely a consequence of China's and India's explosive growth. Given that greenhouse gases are already

creating havoc with our climate and that violent conflict in unstable oil-rich nations is on the rise, will matters only get worse? Or are there hopeful signs that effective, realistic solutions can be found? Blending a concise history of cars and their impact on the world, leading transportation experts Daniel Sperling and Deborah Gordon explain how we arrived at this state, and what we can do about it. Sperling and Gordon assign blame squarely where it belongs--on the auto-industry, short-sighted government policies, and consumers. They explore such solutions as getting beyond the gas-guzzler monoculture, re-inventing cars, searching for low-carbon fuels, and more. Promising advances in both transportation technology and fuel efficiency together with shifts in traveler behavior, they suggest, offer us a way out of our predicament. The authors conclude that the two places that have the most troublesome emissions problems--California and China--are the most likely to become world leaders on these issues. Arnold Schwarzenegger's enlightened embrace of eco-friendly fuel policies, which he discusses in the foreword, and China's forthright recognition that it needs far-reaching environmental and energy policies, suggest that if they can tackle the issue effectively and honestly, then there really is reason for hope. Updated with a new afterword that sheds light on the profound changes in the global economy in the last year, *Two Billion Cars* makes the case for why and how we need to transform transportation now more than ever. Authoritatively prescriptive. --Tom Vanderbilt, *Wilson Quarterly* Provocative and pleasurable, far-seeing and refreshing, fact-based and yet a page-turner, global in scope but rooted in real places. The authors make a convincing case that smart consumers driving smart electric-drive cars can find the critical path to a safer planet. --Robert Socolow, Princeton University In this insightful and persuasive book, Sperling and Gordon highlight one of the biggest environmental challenges of this century: two billion cars. They rightly contend that we cannot avert the worst

of global warming without making our cars cleaner and petroleum-free. Luckily the authors also offer a roadmap for navigating this problem that is both visionary and achievable. -- Frances Beinecke, President, Natural Resources Defense Council
