Combining fun and interactive activities, this guide will have kids captivated for hours constructing fantastic racing cars with the basics of only rubber bands, cardboard, and glue. These simple instructions with templates allow budding engineers to gain hands-on experience as they learn not only how to build a basic racer, but how to make modifications such as aluminum foil axle bearings, steering mechanisms, hinges, cam shafts, and wheels made out of old CDs. This helpful resource has step-by-step instructions for making a basic rubber-band model, a railroad push-car, and a high-speed racer. Other unique projects include Oscar the Laughing Clown, which has a jaw mechanism that opens and closes when it moves, and Spot the Dog, which has a moving tail. Children can even learn how to build a rubber band car big enough for a human. Exploring wheels, bearings, and friction, kids will learn not only how to make speedy racers but also the science that makes the process work.

Classical and Quantum Dynamics in Condensed Phase Simulations Bruce J Berne, Giovanni Ciccotti, David F Coker, 1998-06-17
The school held at Villa Marigola, Lerici, Italy, in July 1997 was very much an educational experiment aimed not just at teaching a new generation of students the latest developments in computer simulation methods and theory, but also at bringing together researchers from the condensed matter computer simulation community, the biophysical chemistry community and the quantum dynamics community to confront the shared problem: the development of methods to treat the dynamics of quantum condensed phase systems. This volume collects the lectures delivered there.

Due to the focus of the school, the contributions divide along natural lines into two broad groups: (1) the most sophisticated forms of the art of computer simulation, including biased phase space sampling schemes, methods which address the multiplicity of time scales in condensed phase problems, and static equilibrium methods for treating quantum systems; (2) the contributions on quantum dynamics, including methods for mixing quantum and classical dynamics in condensed phase simulations and methods capable of treating all degrees of freedom quantum-mechanically. Contents: Barrier Crossing: Classical Theory of Rare but Important Events (D Chandler) Monte Carlo Simulations (D Frenkel) Molecular Dynamics Methods for the Enhanced Sampling of Phase Space (B J Berne) Constrained and Nonequilibrium Molecular Dynamics (G Ciccotti & M Ferrario) From Eyring to Kramers: Computation of Diffusive Barrier Crossing Rates (M J Ruiz-Montero) Monte Carlo Methods for Sampling of Rare Event States (W Janke) Proton Transfer in Ice (D Marx) Nudged Elastic Band Method for Finding Minimum Energy Paths of Transitions (H Jónsson et al.) Elastic Leonard Mlodinow, 2018-03-20 The best-selling author of *Subliminal* and *The Drunkard's Walk* teaches you how to tap into the hidden power of your brain. “Elastic is a book that will help you survive the whirlwind.” —Daniel H. Pink, author of *When* and *A Whole New Mind* Named to the 800-CEO-READ Business Book Awards Longlist In this startling and provocative look at how the human mind deals with change, Leonard Mlodinow shows us to unleash the natural abilities we all possess so we can thrive in dynamic and troubled times. Truly original minds capitalize when everyone else struggles. And most of us assume that these abilities are innate, reserved for a select few. But Mlodinow reveals that we all possess them, that we all have encoded in our brains a skill he terms elastic thinking—and he guides us in how to harness it. Drawing on groundbreaking research, Mlodinow outlines how we can learn to let go of comfortable ideas and become accustomed to ambiguity and contradiction; how we can rise above conventional mindsets and reframe the questions we ask; and how we can improve our ability to solve problems and generate new ideas—critical skills for achieving professional and personal success in our quickly morphing world.

The Rubber Band Rex Stout, 1995-04-01 “Nero Wolfe towers over his rivals. . . . He is an exceptional character creation.”—New Yorker What do a Wild West lynching and a respected English nobleman have in common? On the surface, absolutely nothing. But when a young woman hires his services, it becomes Nero Wolfe’s job to look deeper and find the connection. A forty-year-old pact, a five-thousand-mile search, and a million-dollar murder are all linked to an international scandal that could rebound on the great detective and his partner, Archie, with fatal abruptness. “It is always a treat to read a Nero Wolfe mystery. The man has entered our folklore.”—The New York Times Book Review A grand master of the form, Rex Stout is one of America’s greatest mystery writers, and his literary creation Nero Wolfe is one of the greatest fictional detectives of all time. Together, Stout and Wolfe have entertained—and puzzled—millions of mystery fans around the world. Now, with his perambulatory man-about-town, Archie Goodwin, the arrogant, gourmandizing, sedentary sleuth is back in the original seventy-three cases of crime and detection written by the inimitable master himself, Rex Stout.
