Emb-312 Tucano Joao Paulo Zeitoun Moralez,2017-07-19 Harpia Publishing is proud to announce the launch of a new title for 2017, EMB-312 Tucano: Brazil's turboprop success story, set to become the definitive English-language reference work on this revolutionary Latin American aerospace product. Written by an expert in the field, this book recounts the story of Embraer's EMB-312 turboprop trainer, the first aircraft in its class to offer a cockpit and controls equivalent to its fighter contemporaries, as well enough power to match the high-speed maneuvers of comparable jet trainers. Drawing upon a cadre of authors who are experts in their field, Carrier Aviation in the 21st Century continues Harpia's reputation for providing unprecedented detail and extensive technical specifications, as well as detailing the structure of all the air arms and the individual units that currently embark on board carriers. Illustrations include specially commissioned artworks and diagrams to help illustrate how carrier air power remains an essential element of modern warfare.

Emb-314 Super Tucano João Paulo Zeitoun Moralez,2018-09-19 The Embraer Super Tucano is tough enough to support operations from unprepared runways and in temperatures of 36C and 100% humidity. Flying independently of ground support, it can take off from short and narrow runways to provide support to ground forces. The aircraft integrates a fourth-generation cockpit with some of the most modern technology including datalink, 'hands on throttle and stick' (HOTAS) controls, a head-up display, and night and thermal vision sensors. The crew can deliver up to 1,500kg of conventional and guided weaponry and are provided with ballistic protection. Most other aircraft in its class were developed as advanced trainers before being converted for combat missions. The origins of the single-turboprop EMB-314 Super Tucano are as a robust attack aircraft capable of performing highly varied types of missions, sustaining weeks of continuous operation with high availability. It is almost completely redesigned compared to its predecessor, the EMB-312 Tucano. The two 0.5-in (12.7-mm) machine guns installed in the wings are complemented by a variety of 130 types of armament carried on five external points under the wings and fuselage. With more than 250 examples produced, the Super Tucano performs missions including armed reconnaissance, escort, counterinsurgency and even air defense. It is used by Brazil and 11 other countries and is manufactured under licence in the United States. Afghanistan, Brazil, Colombia, the Dominican Republic and Mauritania have all made operational use of the Super Tucano. The US may become the next operator of the turboprop, with a requirement for as many as 300 new light close air support aircraft.

Agriculture and Industry in Brazil Albert Fishlow, José Eustáquio Ribeiro Vieira Filho,2020-08-04 Agriculture and Industry in Brazil is a study of the economics of Brazilian agriculture and industry, with a special focus on the importance of innovation to productivity growth. Albert Fishlow and José Eustáquio Ribeiro Vieira Filho examine technological change in Brazil, highlighting the role of public policy in building institutions and creating an innovation-oriented environment. Fishlow and Vieira Filho tackle the theme of innovation from various angles. They contrast the relationship between state involvement and the private sector in key parts of the Brazilian economy and compare agricultural expansion with growth in the oil and aviation sectors. Fishlow and Vieira Filho argue that modern agriculture is a knowledge-intensive industry and its success in Brazil stems from public institution building. They demonstrate how research has played a key role in productivity growth, showing how prudent innovation policies can leverage knowledge not only within a particular company but also across whole sectors of the economy. The book discusses whether and how Brazil can serve as a model for other middle-income countries eager to achieve higher growth and a more egalitarian distribution of income. An important contribution to comparative, international, and development economics, Agriculture and Industry in Brazil shows how the public success in agriculture became a prototype for advance elsewhere.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Military Organizations for Homeland Defense and Smaller-Scale Contingencies Kevin D. Stringer,2006-10-30 History has often confirmed that it is not superior weapons but superior organizations that are the most effective factor in achieving military success. In light of this consideration, Kevin D. Stringer's new work proposes how the U.S. military can best be restructured to conduct military operations other than war (as they are known in doctrinal terms).. Such reform is central to meeting the demands of homeland defense and smaller-scale contingencies, including nation-building and stability operations. Foreign military formations present models for peace operations, irregular warfare, and other missions, as well as counterterrorism, law enforcement, and border control. The models considered — drawn from tactical units in Britain, Denmark, Germany, Israel, Norway, Rhodesia, Russia, and Switzerland — are selected as best practice examples for transforming the U.S. Armed Forces for future missions both at home and abroad. The author describes the categories of military operations other than war in the context of force structure requirements for homeland defense and irregular warfare. Each chapter aligns foreign tactical organizations with these military operations to

identify appropriate formations to enhance the U.S. Army. This issue of future organizational structure is crucial to the debate over the Quadrennial Defense Review, the Pentagon report to Congress on emerging threats, and the future role of the National Guard. Changes in existing force structure will have significant implications for the conduct of stabilization operations in Iraq and Afghanistan as well as responses by the active and Reserve components to domestic emergencies.

A Compendium of Armaments and Military Hardware (Routledge Revivals) Christopher Chant, 2014-06-03 First published in 1987, The Compendium of Armaments and Military Hardware provides, within a single volume, the salient technical and operational details of the most important weapons. The complete range of hardware used in land, sea and air forces throughout the world at the time of publication is covered, from tanks to rocket systems, helicopters to cruise missiles, alongside full details of size, weight and operational range. The book's main strength lies in the detail it gives of armament and associated ammunition capabilities, and of the sensors and other electronics required for the weapons to be used effectively. A key title amongst Routledge reference reissues, Christopher Chant's important work will be of great value to students and professionals requiring a comprehensive and accessible reference guide, as well as to weapons 'buffs'.

Military Avionics Systems Ian Moir, 2019-02-12 Ian Moir and Allan Seabridge Military avionics is a complex and technically challenging field which requires a high level of competence from all those involved in the aircraft design and maintenance. As the various systems on board an aircraft evolve to become more and more inter-dependent and integrated, it is becoming increasingly important for designers to have a holistic view and knowledge of aircraft systems in order to produce an effective design for their individual components and effectively combine the systems involved. This book introduces the military roles expected of aircraft types and describes the avionics systems required to fulfil these roles. These range from technology and architectures through to navigations systems, sensors, computing architectures and the human-machine interface. It enables students to put together combinations of systems in order to perform specific military roles. Sister volume to the authors' previous successful title 'Civil Avionics Systems' Covers a wide range of military aircraft roles and systems applications Offers clear and concise system descriptions Includes case studies and examples from current projects Features full colour illustrations detailing aircraft display systems Military Avionics Systems will appeal to practitioners in the aerospace industry across many disciplines such as aerospace engineers, designers, pilots, aircrew, maintenance engineers, ground crew, navigation experts, weapons developers and instrumentation developers. It also provides a valuable reference source to students in the fields of systems and aerospace engineering and avionics.

Brazil, the United States, and the Missile Technology Control Regime Scott D. Tollefson, 1990 This technical report analyzes Brazil's development of ballistic missiles in light of U.S. pressures to stifle that development. The first section describes and critiques the Missile Technology Control Regime (MTCR); the second analyzes the U.S. application of MTCR guidelines toward Brazil; the third assesses Brazil's ballistic missile capabilities; and the fourth considers Brazil's response. The report concludes that the U.S. policy of restricting space and missile technology to Brazil under the MTCR has succeeded in stalling Brazil's missile program, but has also (1) further strained Brazilian security relations with the United States; (2) weakened U.S. influence over Brazil's rocket and missile programs; (3) strengthened Brazilian ties with European suppliers (especially France) of space and missile technology; (4) driven Brazil into closer technological cooperation with the People's Republic of China and the Soviet Union; and (5) intensified Brazilian negotiations with Iraq and Libya. As Brazil moves away from the United States (its traditional supplier of space and missile technology), it is becoming relatively more autonomous and less vulnerable to U.S. restrictions on space and missile technology. The successful implementation of an internationalist development strategy by Brazil's new president, Fernando Collor de Mello, could provide the United States with an exceptional opportunity to improve relations with Brazil. The United States could possibly negotiate the easing of MTCR restrictions on space technology to Brazil without jeopardizing the goal of ballistic missile non-proliferation. The History of North American Small Gas Turbine Aircraft Engines Richard A. Leyes, William A. Fleming, 1999 This landmark joint publication between the National Air and Space Museum and the American Institute of Aeronautics and Astronautics chronicles the evolution of the small gas turbine engine through its comprehensive study of a major aerospace industry. Drawing on in-depth interviews with pioneers, current project engineers, and company managers, engineering papers published by the manufacturers, and the tremendous document and artifact collections at the National Air and Space Museum, the book captures and memorializes small engine development from its earliest stage. Leyes and Fleming leap back nearly 50 years for a first look at small gas turbine engine development and the seven major corporations that dared to produce, market, and distribute the products that contributed to major improvements and uses of a wide spectrum of aircraft. In non-technical language, the book illustrates the broad-reaching influence of small turbines from commercial and executive aircraft to helicopters and missiles deployed in recent military engagements. Detailed corporate histories and photographs paint a clear historical picture of turbine development up to the present. See for yourself why The History of North American Small Gas Turbine Aircraft Engines is the most definitive reference book in its field. The publication of The History of North American Small Gas Turbine Aircraft Engines represents an important milestone for the National Air and Space Museum (NASM) and the American Institute of Aeronautics and Astronautics (AIAA). For the first time, there is an authoritative study of small gas turbine engines, arguably one of the most significant spheres of aeronautical technology in the second half of the 20th century.

The Argentine Flying Fortress Santiago Rivas, 2023-06-30 In the 1960's guerrillas were operating in almost all Latin American countries, as well as in Africa and Asia, and the need of specialized weapons to fight them arose. The Argentine Air Force, seeing this threat grow, asked the FMA factory to produce a counterinsurgency airplane to equip the force, but also to offer on the international market. After several proposals were analyzed, a final product emerged, called the IA-58 Pucará, a robust twin turboprop aircraft with heavy internal weapons, planned to operate from unprepared airstrips on very hard conditions. The plane entered service with the Argentine Air Force in 1975 and more than 100 were produced over the years, with several versions being developed or proposed. It was purchased by Uruguay, Colombia and Sri Lanka, the type gained world notoriety when they took part on the 1982 South Atlantic war, but also had combat experience in Colombia and Sri Lanka, and was tested by the Royal Air Force. Now, with the original version already retired, the Argentine Air Force plans to convert them into the Pucará Fénix version, with new engines and avionics, with new missions too, like intelligence, surveillance and reconnaissance. While some aspects of its story were described in many publications, most of it has never been told until now, including many unknown proposed versions and details of its operational record, both in Argentina and in the other countries that operated the plane.

Technology Transfer And U.S. Security Assistance David J Louscher, Michael D Salomone, 2019-09-05 The national security issues surrounding U.S. arms sales policies and practices have been the subjects of our research for the past ten years. In this study the authors' were determined to conduct a more focussed analysis of emerging policy issues for security assistance; namely, the relationship between technology transfer and security assistance policies of the U.S. Government. This book assesses the development of indigenous arms production capabilities of recipients of U.S. security assistance. In particular we examine a seldom analyzed level of technology transfer: the transfer of less than state-of-the-art technologies and production capabilities to allies through routine security assistance decisions.
