Ti Arm Programming for Arduino Programmers Using Energia Muhammad Ali Mazidi,Shujen Chen,Eshragh Ghaemi,2018-07-31 Arm is the dominant CPU architecture used in microcontrollers and embedded systems. The Arduino is a widely used platform to program microcontrollers. The Energia platform uses the Wiring and Arduino framework to program the TI Arm microcontrollers. In this book, we use TI Arm LaunchPad board and Energia IDE (integrated development environment) to program the I/O switches, LEDs, LCD, keypad, Serial Com, 7-segment LED, ADC, sensors, Graphic LED, stepper and DC motors. We also provide SPI and I2C programming examples for interfacing of the above devices. Our website www.MicroDigitalEd.com has all the tutorials, source codes, PowerPoints, and other support materials for this book. This book allows students to use the same Arm platform for both Arduino and the advanced embedded systems courses. Our TI MSP432 or Tiva ARM books can be used for the advanced embedded systems courses in third and fourth year of engineering program after taking the Arm-based Arduino course in the first or second year using the same hardware. O impacto do planeamento do sector de energia eléctrica angolano no processo de integração regional da África Austral João de Jesus Afonso Domingos Neto,2014-09-12 O impacto do planeamento do sector de energia eléctrica angolano no processo de integração regional da África Austral, é a estratégia que nós delineámos para que Angola, face à desestruturação da sua política macroeconómica, se insira no processo de integração na região. Na prossecução deste objectivo, após análise do sector em questão, delineámos como factor determinante deste processo a reestruturação da política tarifária versus planeamento, na medida em que ela é o garante de toda a política do sector e, por conseguinte, sendo parte integrante da política macroeconómica influenciará sobre a mesma e vice-versa. Este trabalho pretende identificar como a política tarifária versus política macroeconómica joga em simultâneo para o equilíbrio interno e externo de Angola e, consequentemente, para o processo de integração regional. Palavras chaves: planeamento, sistema tarifário, financiamento e investimento, dívida pública, estabilização e integração regional.

The Italian Utilities Industry Andrea Gilardoni,2020-01-21 This book addresses the fundamental changes that the Italian public utilities sector has undergone in the last two decades. Since the late 1990s, liberalisation and privatisation have replaced state-owned monopolies at both the national and local level, new technologies have created a broad range of new opportunities for power generation and distribution, and a redesigned public policy agenda has brought to the fore a whole set of new priorities. In this fast-changing environment, firms have redrawn their strategies, redesigned their business architectures and models, invested in infrastructure and R&D, taken advantage of growth opportunities at home and abroad, opened up their ownership structure, revised their offerings, and developed a new approach to customers. As a result, a radically altered market structure has emerged. As the sector tackles the overriding challenge of sustainability and energy transition, the book takes stock of such past and ongoing developments through the direct testimonies of various stakeholders: the companies in the energy, water, and waste management sectors that are at the forefront of this sweeping transformation; regulators; financial partners; and management consulting firms. The diversity of perspectives and wealth of information presented make this book a valuable resource for anyone wanting to grasp the direction, intensity and causes of change, as well as the nature of the challenges that lie ahead. This work has been prepared as part of the research activities of the Observatory on Alliances and Strategies in the Pan-European Utility Market, one of Agici’s Research and Advisory units.
