Programming Projects in C for Students of Engineering, Science, and Mathematics Rouben Rostamian,2014-09-03 Like a pianist who practices from a book of études, readers of Programming Projects in C for Students of Engineering, Science, and Mathematics will learn by doing. Written as a tutorial on how to think about, organize, and implement programs in scientific computing, this book achieves its goal through an eclectic and wide-ranging collection of projects. Each project presents a problem and an algorithm for solving it. The reader is guided through implementing the algorithm in C and compiling and testing the results. It is not necessary to carry out the projects in sequential order. The projects contain suggested algorithms and partially completed programs for implementing them to enable the reader to exercise and develop skills in scientific computing; require only a working knowledge of undergraduate multivariable calculus, differential equations, and linear algebra; and are written in platform-independent standard C, and the Unix command-line is used to illustrate compilation and execution. The primary audience of this book is graduate students in mathematics, engineering, and the sciences. The book will also be of interest to advanced undergraduates and working professionals who wish to exercise and hone their skills in programming mathematical algorithms in C. A working knowledge of the C programming language is assumed.

Human-Centered e-Business Rajiv Khosla,Ernesto Damiani,William Grosky,2012-12-06 Human-Centered e-Business focuses on analysis, design and development of human-centered e-business systems. The authors illustrate the benefits of the human-centered approach in intelligent e-sales recruitment application, integrating data mining technology with decision support model for profiling transaction behavior of internet banking customers, user-centered context dependent data organization using XML, knowledge management, and optimizing the search process through human evaluation in an intelligent interactive multimedia application. The applications described in this work, facilitates both e-business analysis from a business professional's perspective, and human-centered system design from a system development perspective. These applications employ a range of internet and soft computing technologies.

Veblen in Perspective Stephen Edgell,2001 This unique work combines an authoritative account of Veblen's life with a thoughtful appraisal of his interdisciplinary analysis of the origins, nature, and persistence of industrial capitalism. The book goes beyond the myth of Veblen's alleged marginality, and advances an original interpretation of his life's work, with special reference to his ethnicity and to evolutionism. In the process, the author considers the intellectual sources and impact of Veblen's critical social thought, and its continued relevance to understanding the economic and cultural dimensions of global capitalism.

Information Systems and e-Business Technologies Roland Kaschek,Christian Kop,Claudia Steinberger,Günther Fliedl,2008-04-19 This book constitutes the refereed proceedings of UNISCON 2008 held in Klagenfurt, Austria, during April 22-25, 2008. UNISCON combines the ECOMO workshop series and the ISTA conference series. The 19 papers dealing with conceptual modeling, model-driven software development and information systems applications represent a 30% selection from the original set of submissions. They are completed by two keynote lectures and 35 papers from internationally renowned researchers, invited in honor of Heinrich C. Mayr, whose 60th birthday is also celebrated at this event, that he originally created.

Using GeoWorks Pro Greg Schultz,Gregory G. Schultz,1992 A Graphical User Interface (GUI) like Microsoft Windows 3.0, GeoWorks differs in that it requires only an 8088 computer with 512K of RAM, thereby increasing the number of operating environments on which it can function. Includes information on installation, appliances, elements, and applications.

Introduction to Spacecraft Thermal Design Eric A. Silk,2020-07-09 Develop a fundamental understanding of heat transfer analysis techniques as applied to earth based spacecraft with this practical guide. Written in a tutorial style, this essential text provides a how-to manual tailored for those who wish to understand and develop spacecraft thermal analyses. Providing an overview of basic heat transfer analysis fundamentals such as thermal circuits, limiting resistance, MLI, environmental thermal sources and sinks, as well as contemporary space based thermal technologies, and the distinctions between design considerations inherent to room temperature and cryogenic temperature applications, this is the perfect tool for graduate students, professionals and academic researchers.

Development and Sustainability Sarmila Banerjee,Anjan Chakrabarti,2014-07-08 Following the reforms undertaken in the last two decades, India's economic landscape has been radically transformed. This book examines the new economic map, which is shown to be shaped by two intertwined currents: globalization and sustainability. Weaving extensively through these currents and the canvas of development in the Indian economy they open up, this work seeks to introduce new methodologies, a corpus of concepts and modes of analysis to make sense of the emerging order of things. What transpires in the course of the investigation is a critical reflection of the present in which not only the new institutions, policies and practices are analyzed, but their limitations, fragility and at times myopic approaches are brought to light. By highlighting the rough edges created by the new conditions, this book is firmly engaged with the frontier of the Indian economy and ends up challenging many well-known conjectures and assumptions. In doing so, it strives to shift the Indian economy to a new terrain, thereby fundamentally re-locating and re-orienting the discourse of that economy as a unique object of analysis.

Plastics Process Analysis, Instrumentation, and Control Johannes Karl Fink,2021-03-09 This book focuses on plastics process analysis, instrumentation for modern manufacturing in the plastics industry. Process analysis is the starting point since plastics processing is different from processing of metals, ceramics, and other materials. Plastics materials show unique behavior in terms of heat transfer, fluid flow, viscoelastic behavior, and a dependence of the previous time, temperature and shear history which determines how the material responds during processing and its end use. Many of the manufacturing processes are continuous or cyclical in nature. The systems are flow systems in which the process variables, such as time, temperature, position, melt and hydraulic pressure, must be controlled to achieve a satisfactory product which is typically specified by critical dimensions and physical properties which vary with the processing conditions. Instrumentation has to be selected so that it survives the harsh manufacturing environment of high pressures, temperatures and shear rates, and yet it has to have a fast response to measure the process dynamics. At many times the measurements have to be in a non-contact mode so as not to disturb the melt or the finished product. Plastics resins are reactive systems. The resins will degrade if the process conditions are not controlled. Analysis of the process allows one to strategize how to minimize degradation and optimize end-use properties.

Composing Music with Computers Eduardo Miranda,2001-04-27 Focuses on the role of the computer as a generative tool for music composition. Miranda introduces a number of computer music composition techniques ranging from probabilities, formal grammars and fractals, to genetic algorithms, cellular automata and neural computation. Anyone wishing to use the computer as a companion to create music will find this book a valuable resource. As a comprehensive guide with full explanations of technical terms, it is suitable for students, professionals and enthusiasts alike. The accompanying CD-ROM contains examples, complementary tutorials and a number of composition systems for PC and Macintosh platforms, from demonstration versions of commercial programs to exciting, fully working packages developed by research centres world-wide, including Nyquist, Bol Processor, Music Sketcher, SSEYO Koan, Open Music and the IBVA brainwaves control system, among others. This book will be interesting to anyone wishing to use the computer as a companion to create music. It is a comprehensive guide, but the technical terms are explained so it is suitable for students, professionals and enthusiasts alike.
