**The Art of Studio Gainax** Dani Cavallaro,2015-01-27 Formed by a small group of university students in the early 1980s, Studio Gainax is now one of the most adventurous and widely esteemed anime companies on the scene. And it is fascinating for its unique approach to animation. Formal experimentation, genre-straddling, self-reflexivity, unpredictable plot twists, a gourmet palate for stylishness, proverbially controversial endings, and a singularly iconoclastic worldview are some of the hallmarks. This documentation of the studio's achievements provides a critical overview of both the company and its films: in-depth examinations of particular titles that best represent the company's overall work, including television series such as Nadia: The Secret of Blue Water and Neon Genesis Evangelion, and feature films such as Royal Space Force: The Wings of Honneamise and Gunbuster vs. Diebuster. Each chapter highlights the contribution made by a specific production to the company's progress.

**Neon Genesis Evangelion: ANIMA (Light Novel) Vol. 5** Ikuto Yamashita,2021-06-24 Sacrificing himself to shield Earth from the devastation of the Third Impact, Shinji's mind floats untethered from his body. He lingers in a space where time stands still, trapped in the moment of the impact. As Armaros swallows Heurtebise and defeat seems near, Asuka tries to use the memories of their classroom days together to wake Shinji from his new, shattered reality.

*Sources of Contamination in Medicinal Products and Medical Devices* Denise Bohrer,2012-09-25 The first one-volume guide to sources of contamination in pharmaceuticals and medical devices Most books dealing with contaminants in medicinal products often focus on analytical methods for detecting nonspecific impurities. Key to the work of the pharmaceutical chemist, this unique reference helps identify the sources of contamination in medicinal and pharmaceutical products and medical devices. Divided into three parts, Sources of Contamination in Medicinal Products and Medical Devices covers chemical, microbiological, and physical (particulate matter) contamination, including those originating from sterilization procedures. As compelling as a medical documentary, the book sheds light on how impurities and contaminants can enter the human body transported via a specific product or treatment. Focusing on only those medicinal products and medical devices that may lead to exposure to contaminants harmful to human health, the book offers a comprehensive, systematic look at the entire universe of medical contamination: Chemical contaminants including residual solvents, catalyst residuals, and genotoxic impurities in active pharmaceutical ingredients (APIs) Diagnostic imaging agents (i.e., radiopharmaceuticals and contrast agents) Microbiological and endotoxin contamination involving single and multiple dose products, medical devices, and biofilms Contamination from sterilization procedures, residuals from radiation sterilization, ionizing radiation on packaging materials and medical devices Medicinal gases and volatile anesthetics Biopharmaceuticals including recombinant DNA technology products Extractables and leachables from containers made of glass, plastics, and metal Each section of the book contains information on what contaminants could be expected in a particular product, and how they were generated and reached that product. With up-to-date regulatory guidelines for determining contamination, as well as methods for assessing, quantifying, avoiding and removing contaminants, Sources of Contamination in Medicinal Products and Medical Devices is essential to fully understanding the specific threats that undermine the safety of medicines and medical devices.

**Monoidal Categories and Topological Field Theory** Vladimir Turaev,Alexis Virelizier,2017-06-28 This monograph is devoted to monoidal categories and their connections with 3-dimensional topological field theories. Starting with basic definitions, it proceeds to the forefront of current research. Part 1 introduces monoidal categories and several of their classes, including rigid, pivotal, spherical, fusion, braided, and modular categories. It then presents deep theorems of Müger on the center of a pivotal fusion category. These theorems are proved in Part 2 using the theory of Hopf monads. In Part 3 the authors define the notion of a topological quantum field theory (TQFT) and construct a Turaev-Viro-type 3-dimensional state sum TQFT from a spherical fusion category. Lastly, in Part 4 this construction is extended to 3-manifolds with colored ribbon graphs, yielding a so-called graph TQFT (and, consequently, a 3-2-1 extended TQFT). The authors then prove the main result of the monograph: the state sum graph TQFT derived from any spherical fusion category is isomorphic to the Reshetikhin-Turaev surgery graph TQFT derived from the center of that category. The book is of interest to researchers and students studying topological field theory, monoidal categories, Hopf algebras and Hopf monads.
