Michael David Missig

Choosing and Using Astronomical Eyepieces William Paolini, 2013-08-23 A valuable reference that fills a number of niches including that of a buyer's guide, technical desk reference and observer's field guide. It documents the past market and its evolution, right up to the present day. In addition to appealing to practical astronomers - and potentially saving them money - it is useful both as a historical reference and as a detailed review of the current market place for this bustling astronomical consumer product. What distinguishes this book from other publications on astronomy is the involvement of observers from all aspects of the astronomical community, and also the major manufacturers of equipment. It not only catalogs the technical aspects of the many modern eyepieces but also documents amateur observer reactions and impressions over the years, using many different eyepieces. Eyepieces are the most talked-about accessories and collectible items available to the amateur astronomer. No other item of equipment commands such vigorous debate, or has evolved into such a remarkable array of forms and functions. 'Choosing and Using Astronomical Eyepieces'

provides a vast amount of reference material to point readers towards the best buys and the right eyepieces for different kinds of observing.

Diffraction Optics Applied to Eyepiece Design Michael David Missig, 1994

Making Eyepieces for Amateur Astronomy Neil M Wyatt, 2020-10-24 Experienced visual astronomers will agree that having quality eyepieces is as important as having quality telescopes. Although the standard eyepieces supplied with many telescopes are not particularly good, by making careful choices it is possible to build a good, varied eyepiece collection at reasonable cost. This raises the question - why bother making your own basic eyepieces? The answer is - just for the fun of it! If you have assembled your own telescope it may seem a shame to only use it with bought in eyepieces, even if these offer better views. Also, there is interest in making and comparing different eyepiece designs and also the opportunity to be surprised by how good some more advanced self-made designs can be. This straightforward guide will show you how the most commonly encountered eyepieces are constructed and give you enough information to make your own.

Jupiter John W. McAnally, 2007-12-16 With the increasing sensitivity of the equipment available to the home astronomer, and increasing interest in celestial bodies, this Springer series is a huge helping hand to skywatchers who want to hone their skills. Astronomers' observing guides provide up-to-date information for amateur astronomers who want to know all about what it is they are observing. This is the basis of the first part of the book. The second part details observation techniques for practical astronomers, working with a range of different instruments. The book reviews the latest findings and satellite observations of Jupiter, as well as presenting superb pictures of Jupiter taken by McAnally himself, who proceeds to explain to the reader how to arrive at such beautiful results.

The Effect of Eyepiece Focus on Visual Acuity Through ANVIS Night Vision Goggles During Short - and Long-Term Wear ,2001 The eyepiece lenses of ANVIS night vision goggle are ostensibly adjusted for optimum visual acuity (VA). Many users however do not adjust the eyepieces competently. This paper examines whether a single-focus eyepiece is capable of producing satisfactory VA while maintaining comfortable vision over extended periods. In a short-term ANVIS wear study, a range of

eyepiece focus produced comparable VA independent of luminance and contrast. The single best-overall eyepiece focus produced vision equal to, or better than, that of subject-adjusted eyepieces, producing VA within 2% of optimal. However, zero diopter eyepieces reduced VA by 10%. In a long-term ANVIS wear study, - 1.5 diopter eyepieces caused half of the subjects to complain of blurred or uncomfortable vision. These studies indicate -0.75 diopter eyepieces provide optically- corrected ANVIS users with near optimal binocular VA and satisfactory visual comfort during extended ANVIS use.

Deep Sky Observing Steve R. Coe,2000-08-16 Steve Coe has been watching the deep sky from locations near his home in Arizona for almost 20 years. During that time he has accumulated a wealth of knowledge, observations, hints and tips that will help every deep sky observer, regardless of experience. This, his first book, gives detailed practical advice about how to find the best observing site, how to make the most of the time spent there, and what equipment and instruments to take along. There are comprehensive lists of deep sky objects of all kinds, along with Steve's own observations describing how they look through telescopes with apertures ranging from 8 to 36 inches (0.2 - 0.9 m). Most of all, this book is all about how to enjoy astronomy. Steve's enthusiasm and sense of wonder shine through every page as he invites you along on a tour of some of the most beautiful and fascinating sites in the deep sky.
