2 Unified Field Theory: Mathematical Treatise R. A. VILLECCO, 2014-04 In this book, all known electromagnetic laws are proven to be derivable from the solution of a single quadratic equation. This governing equation, it is shown, generates precisely three complex fields in 4-space, but can itself be generated as a law of all even-dimensioned spaces in universes having meaning, without need of a prior knowledge of physics. Provided for the first time are electromagnetic formulas applicable in a general Riemannian space: the fundamental field tensor with three complex components, the energy-momentum tensor and the force-power tensor. The Lorentz force, as currently known, is shown to be an approximate form of the derived Riemannian force-power tensor, which imbeds gravitational interactions inclusive of frame-dragging terms. Newly identified electro-gravitational interaction force and power-transfer mechanisms are provided as natural consequences of the reformulations. As a byproduct of the complex-field theory developed in this book, the mystery of missing magnetic monopoles in nature is fully resolved. Also clarified are classical duality, field superposition, and the origins of charge sign and chirality. The approach taken to include all spatial dimensionalities leads to the justifiable conclusion that infinitely many higher-dimensioned spaces likely exist, with their laws of operation able to be broadly generated from the material presented....

2 Systematic Novelties of the Enigmatic Universe of the Leptocheiliids: Crustacea : Tanaidacea Modest Gu² u, By the present contribution by Modest Gu² u, the family Leptocheiliidae enriched with 29 new taxa (a subfamily, seven genera and 21 species), as it results from the list, hereinafter. Subfamily Leptocheiliinae Lang, 1973: - Genus Alloleptocheilia n. g., with the species: A. angusta n. sp., A. heardi n. sp., A. insolita n. sp., A. monotricha n. sp. and A. multiarticulata n. sp.; - Genus Chondrocheilia n. g., with the species: C. andersoni n. sp., C. baliensis n. sp., C. dentitruncata n. sp. and C. distincta n. sp.; - Genus Kalloleptocheilia n. g., with the species: K. maiorina n. sp., K. pauxilla n. sp. and K. robusta n. sp.; - Genus Leptocheilia Dana, 1849, with the species: L. afrieurina n. sp. and L. splendida n. sp.; - Genus Paraleptocheilia n. g., with the species P. magnispina n. sp.; - Genus Permixmapella n. g., with the species P. oculifurcillata n. sp.; - Genus Poorea Edgar, 2012, with the species P. obscurus; n. sp. and P. tanzaniensis n. sp. Subfamily Konariinae Bamber, 2013: - Genus Antiparus n. g. with the species A. longisetosus n. sp. Subfamily Metaleptocheiliinae nov.: - Genus Metaleptocheilia n. g. with the species M. estafricana n. sp. and M. vestpacifica n. sp. Also, the female of the species Leptocheilia forresti (Stebbing, 1896), unknown up to now, is described and illustrated for the first time, and the male is minutely redescribed. It is for the first time when a large number of taxa (six genera and 12 species) of the family Leptocheiliidae are minutely described on the basis of both sexes, this allowing the establishing of the common morphological features in the males and females of the same species, as well of those present at the genus level. The males of the genus Antiparus n. g. and of the species Antiparus longisetosus n. sp., Poorea obscurus n. sp. and P. tanzaniensis n. sp. and the females of the genus Kalloleptocheilia n. g. and of the species Alloleptocheilia insolita n. sp., A. multiarticulata n. sp., Kalloleptocheilia maiorina n. sp., K. pauxilla n. sp., K. robusta n. sp. and Leptocheilia afrieurina n. sp. are unknown. The identification keys of the leptocheiliid subfamilies are presented, for the genera of the subfamilies Leptocheiliinae and Konariinae, as well as the identification keys of the species of the genera Leptocheilia, Alloleptocheilia n. g., Kalloleptocheilia n. g., Makassaritanais Gu² u, 2012, Metaleptocheilia n. g. and Poorea Edgar, 2012, and of the new species of the genus Chondrocheilia n. g. Considering that the females and males of the species of the family Leptocheiliidae have different morphological features, the key of the genera of the subfamily Leptocheiliinae (the most numerous within the family, having 20 genera) refers both to the common features of the two sexes (when it was possible) and separately, for females and males allowing a more precise identification. The studied material provided from the Indo-West-Pacific shallow waters. The comments from the Addendum refer to the recent English version of the chapter Order Tanaidacea (revised and updated by Kim Larsen after the original text co-authored by Modest Gu² u and the late Jürgen Sieg), from the well-known Trait² de Zoologie (Tome VII, Fascicule III A, Crustac² s Pracarides), founded by P.-P. Grass² . That new version contains numerous unacceptable mistakes since the author was not consulted or at least informed about the re-publication, as it would have been ethically appropriate.

2 United States Code: Title 26: Internal Revenue Code, [sections] 1-436 , 2013 Preface 2012 edition: The United States Code is the official codification of the general and permanent laws of the United States. The Code was first published in 1926, and a new edition of the Code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First session, enacted between January 3, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited U.S.C. 2012 ed. As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 USC 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office. -- John. A. Boehner, Speaker of the House of Representatives, Washington, D.C., January 15, 2013--Page VII.

2 Zoological Catalogue of Australia G. Cassis, Gordon F. Gross, 2002 The infraorder Pentatomomorpha is the subject of the second volume in the Zoological Catalogue of Australia series dealing with the true bugs (the suborder Heteroptera). It includes the bark bugs, stilt bugs, seed bugs, cotton stainers, burrowing bugs, shield bugs and stink bugs. Many of these species are of significant economic importance both as pests and as natural enemies of other insect pests. In this catalogue, the authors propose a new classification for the Australian Heteroptera based on the most recent developments in heteropterology worldwide. The proposed classification departs significantly from all previous treatment of the Australian fauna. There is a comprehensive treatment of the classification and nomenclature of the Australian species and a thorough review of the literature concerned with the higher classification of the Pentatomomorpha. The volume gives detailed information on the distribution and ecology of each species and features the first in depth listing of their host associations, including a significant accounting of the plant associations. All species and generic synonymies are given, including extra-limital synonyms, along with detailed type specimen data. Features * Provides a new classification for the Australian Heteroptera, reflecting the most recent developments in heteropterology worldwide * Covers 34 families, 439 genera and 1179 species * Completes the work for the Australian Heteroptera, complementing volume 27.3A * Includes comprehensive synonymical and bibliographic listings and detailed distribution information * Gives the first listing of the host plants of the Pentatomomorpha in Australia * Sample
