BUILDING MATERIALS P.C. VARGHESE,2015-02-26 This practice-oriented book, now in its second edition, presents a lucid yet comprehensive coverage of the engineering properties and uses of the materials commonly used in building construction in India. Profusely illustrated with tables and diagrams, the book brings into light the basics of building materials and their specifications. Besides giving information regarding the traditional building materials, the text now acquaints the reader with up-to-date and in-depth information pertaining to modern materials available in the market. The references to IS codes and standards make this text suitable for further study and field use. The second edition possesses some substantial changes in Chapters 12, 13, 14 and 20. Now, the book offers a new section on durability of concrete in Chapter 12; a modified section regarding revision of IS 10262 (1982) code on concrete mix design to IS 10262 (2009) and a new section on classification of exposure conditions in Chapter 13; and a new section relating to large advances made in concrete construction and repair chemicals in Chapter 14. Besides, the content of Chapter 20 has been completely updated, with a particular emphasis on the extensive use of aluminium in building construction. Primarily intended for the students pursuing undergraduate degree (B.E./B.Tech.) and diploma courses in civil engineering and architecture, the book, on account of lecture-based presentation of the subject, should also prove eminently utilitarian for the young teachers to use it in their classroom lectures as well as for practising engineers to get a clear understanding of the fundamentals of the subject. NEW TO THE SECOND EDITION Review questions at the end of each chapter enable the reader to recapitulate the topics Considerable attention is given on field practice Syllabus of laboratory work on construction materials and a model question paper (Anna University) are given in appendices to guide the reader.

Investigations of Concrete Masonry Waterways Experiment Station (U.S.),1962 Fourteen groups of concrete masonry units were tested for drying shrinkage by CRD-C 73. During the drying period, samples were tested for moisture condition by the relative humidity method (CRD-C 76). The tests were performed at six Corps of Engineers laboratories. The relation between shrinkage, expressed as length change, percent, and equilibrium relative humidity was studied. No single pattern was apparent. Units at modified British equilibrium which would be expected to be in equilibrium with 21% relative humidity were found by test to be in equilibrium with relative humidities from 0.0 to 33.5%. Further study is recommended. (Author).
