*Tropic of The Sea* Satoshi Kon,2013-09-17 Yosuke's family has a strange tradition - once every sixty years they receive an egg from a mermaid. When the egg matures his family dutifully returns it to the sea, where the whole process is then repeated. In exchange for this favor, the mer-people bless his coastal town with bountiful catches of fish and calm seas. But as a commercial development encroaches on the sleepy seaside village and Yosuke's father is lured away from tradition towards modern prosperity, and turns the egg into a tourist trap, what will happen to the promise their family made to the mermaids generations ago? Tropic of the Sea Satoshi Kon's first feature length manga, includes a dozen black and white art plates from his

original release, along with a 5-page essay written by Kon in 1999 detailing his transition from the manga industry to the animation business.

*Our Dead World* Liliana Colanzi,2017-05-26 A young woman suffers a mental breakdown because of her repressive and religious mother. A group of children is fascinated by the sudden death of a friend. A drug trafficking couple visits Paris at the same time as a psychopathic cannibal. A mysterious wave travels through a university campus, driving students to suicide. A photographer witnesses a family's surface composure shatter during a portrait session. A worker on Mars sees ghostly animals in the desert and longs for an impossible return to Earth. A plastic surgeon botches an operation and hides on a sugar cane plantation where indigenous slavery is practiced. Horror and the fantastic mark the unstable realism of *Our Dead World*, in which altered states of consciousness, marginalized peoples, animal bodies, and tensions between tradition and modernity are recurring themes. Liliana Colanzi's stories explore those moments when the civilized voice of the ego gives way to the buzzing of the subconscious, and repressed indigenous history destabilizes the colonial legacy still present in contemporary Latin America. Colanzi is considered by critics to be one of the most promising voices of the new Latin American narrative, and this book is an ambitious formal and thematic leap.

**Tsubasa** CLAMP (Mangaka group),2010 THE RESTART OF TIME! Cut off by time, the travelers have arrived in Fei-Wang Reed's dimension to get Sakura back. But Fei-Wang has been waiting for them, and they're in for the ultimate fight. They're entrenched on opposing sides of a new tobacco tax, with the vote slated for Valentine's Day. As if that weren't enough to have them running in opposite directions, Courtney is a sexual novice, and Eric has a framed riding crop in his office that Courtney thinks he uses for carnal pleasure. Their misreading of each other's intents and desires makes for mixed signals politically and romantically. Can they find common ground on the Senate floor, and more importantly, in love? Sensuality Level: Sensual

**Persistent Spectral Hole-Burning: Science and Applications** G.C. Bjorklund,1988-02-29 This book describes the underlying scientific fundamentals and principal phenomena associated with persistent spectral hole-burning in solids, and presents an overview of possible future applications to optical storage of digital data and optical signal processing. Organization of the material is by the general physical mechanism responsible for the formation of persistent spectral holes. After a description of the basic principles and methods of hole-burning, with examples from photochemical processes in crystalline and amorphous hosts, the unusual proton tunneling phenomena that occur in hydrogen-bonded polymers and glasses are described. Persistent spectral hole-burning in inorganic materials due either to photoionization or to photophysical effects is then summarized, followed by a detailed discussion of nonphotochemical hole-burning mechanisms for electronic transitions in amorphous solids. The book concludes with a description of potential applications to data storage and optical processing using frequency-domain, holographic, and electric field techniques. Readers of this volume will gain a detailed appreciation of both the generality of the persistent spectral hole-burning phenomenon and the power of the technique in studying microscopic dynamics and mechanisms of phototransformation in low-temperature solids.
