The Navy as a Fighting Machine Bradley Allen Fiske, 1916 What is the navy for? Of what parts should be composed? What principles should be followed in designing, preparing, and operating it in order to get the maximum return for the money expended? To answer these questions clearly and without technical language is the object of this book--Preface.

The Last Days of the Fighting Machine. C. A. Powell, 2019-10-11 The Martians were on the rampage all across Queen Victoria's Britain. Nothing man possessed could stop them. But then the huge fighting machines began to slow down and lumber to a halt. One by one, the Martians inside the giant machines began to die. Soon there were just scattered and failing remnants of the once-mighty tripods wandering here and there among the derelict monuments. Even the red weed was dying as Mother Earth began to reclaim her own. The human survivors became emboldened and they emerged from the hiding places intent on fighting back.

The Division As a Fighting Machine William G. Haan, 2017-09-21 We shall pass by these early stages, merely remarking that while the reorganization was going on the training did not stop. The full seven hours of training went on daily on the drill grounds, on the ranges, on the bayonet courses, in the schools, and everywhere, while in the office the staff was patiently working on reorganization under a policy adopted by the Division Commander after full consultation and agreement with the brigade commanders. One word here in regard to training: From the beginning it was one of my principle functions to keep before the eyes and minds of the officers and men the fact that the Thirty-second Division was going to fight; that all of our training must be conducted with that end constantly in view; and that only such officers should accompany the Division to France as by their physical fitness, their age, and their aptitude for commanding men in battle were considered fully qualified for leading against the enemy the splendid men of which the Division was to be composed. For many years, in fact since its organization, the only kind of fighting for which the United States Army has been trained is the offensive. We have always believed that it is only offensive action that can win battles and wars; and under that theory it became the

duty of the Division Commander at these early stages to visualize his division in future offensive action, in order that he could adopt a proper doctrine of training so as to instill into each man and each element which were finally to make up his fighting unit that kind of training which would make it of most use in a fighting machine in which offensive tactics were the only tactics that were to be used in battle.

Germany's Fighting Machine: Army, Navy, Airships Ernest Flagg Henderson,2016-08-17
GERMANY'S FIGHTING MACHINE (First War), her Army, her Navy, her Air-ships, and why she arrayed them against the Allied Powers of Europe But a few weeks ago the author of this little book was in Germany studying the land and its institutions and full of admiration for its achievements in every field. Two days after he had taken ship for America Germany was practically at war with France and Russia. England soon joined in the conflict, and the splendid Hamburg liner on which the author was a passenger was a hunted thing on the ocean, owing her safety at last to a friendly fog. The great shipping company, with its nearly two hundred vessels, was out of the running as a commercial enterprise, a symbol of the paralyzed industries of the whole country. To the ordinary observer the conflict came like a bolt from the blue, but to the historian and to the man who reads the foreign newspapers it was not unexpected. The historians recognized that it was the appointed time for a war between the great nations. The Franco-Prussian War took place forty-three years ago. When, since the days of the grandsons of Charlemagne, have the chief powers kept out of war for so long a time? In the ninth and tenth centuries the question of Lorraine was as troublesome as it has been in the nineteenth and twentieth; in the eleventh and twelfth an expedition against Italy was in the day's work of almost every German emperor; and England and Sicily were conquered by the Normans; in 1215 took place the first general international battle; in 1250 the final expeditions against the Emperor Frederick II; in 1272 the Sicilian wars of the house of Anjou. The Guelphs and Ghibellines carry us on to the Hundred Years' War; the Hapsburg struggles against Italy and the Turks bring us down to the invasion of Italy by Charles VIII of France, to the campaigns of Maximilian, to the Field of the Cloth of Gold, to the religious wars of Charles V. Close on the heels of the latter struggles came not only the French religious wars but the invasion of England by Philip II's great armada. The Thirty Years' War, Louis XIV's war of conquest, the Spanish Succession, the Silesian and the Seven Years' Wars fill the seventeenth and eighteenth centuries; the Napoleonic, Crimean and Franco-Prussian Wars the nineteenth. Yes, it was time for a new struggle. When a great and extraordinary event takes place it is easy, somewhere in the world, to point to omens and prophecies that have heralded it. But in the case of the present war we can see in the German newspapers how, from month to month of the present year, the struggle was felt to be more and more imminent and how Russia, the power that eventually precipitated the catastrophe, was felt to be the center of real danger.

After the Martians Steven R. Southard,2019-10-03 In 1901, the Martians attacked Earth, but tiny

bacteria vanquished them. Their advanced weaponry lay everywhere—three-legged fighting machines, heat rays, and poison gas. Now, in 1917, The Great War rages across Europe but each side uses Martian technology. Join Corporal Johnny Branch, a young man from Wyoming, as he pursues his dream to fight for America. Follow magazine photographer Frank Robinson while he roams the front lines, hoping to snap a photo conveying true American valor. Perhaps they'll discover, as the Martians did before them, that little things can change the world.

Fighting Machines Dan Saxon, 2021-12-03 Lethal autonomous weapons are weapon systems that can select and destroy targets without intervention by a human operator. *Fighting Machines* explores the relationship between lethal autonomous weapons (LAWS), the concept of human dignity, and international law. Much of this analysis speaks to three fundamental and related problems: When a LAWS takes a human life, is that killing a violation of human dignity? Can states and non-state actors use LAWS in accordance with international law? And are there certain responsibilities of human decision-making during wartime that we should not delegate to machines? In the book, Dan Saxon argues that the use of LAWS to take human life constitutes a violation of human dignity. Rather than concentrating on the victims of the use of lethal force, Saxon instead focuses on the technology and relevant legal principles and rules to advance several propositions. First, as LAWS operate at increasingly greater speeds, their use will undermine the opportunities for, and the value of, human reasoning and judgment. Second, by transferring responsibility for reasoning and judgment about the use of lethal force to computer software, the use of LAWS violates the dignity of the soldiers, commanders, and law enforcement officers who historically have made such decisions, and, therefore, breaches international law. Third, weapon designs that facilitate teamwork between humans and autonomous systems are necessary to ensure that humans and LAWS can operate interdependently so that individuals can fulfil their obligations under international law—including the preservation of their own dignity—and ensure that human reasoning and judgment are available for cognitive functions better suited to humans than machines. *Fighting Machines* speaks to the fields of international humanitarian law, human rights, criminal law, and legal philosophy. It will also be of interest to non-lawyers, especially military officers, government policy makers, political scientists, and international relations scholars, as well as roboticists and ethicists.

Fighting Machines Dan Saxon, 2021-12-03 This book addresses the relationship between lethal autonomous weapon systems, human dignity, and international law. Its central thesis is that the delegation

of human responsibility for moral judgments to lethal autonomous weapon systems erodes human dignity and, consequently, international law--

which in its overpowering magnitude well-nigh unnerved its commander. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
