5. **The Medieval Frontiers of Latin Christendom** Felipe Fernandez-Armesto, 2017-05-15 The aim of this first volume in the series The Expansion of Latin Europe is to sketch the outlines of medieval expansion, illustrating some of the major topics that historians have examined in the course of demonstrating the links between medieval and modern experiences. The articles reprinted here show that European expansion began not in 1492 following Columbus's voyages but earlier as European Christian society re-arose from the ruins of the Carolingian Empire. The two phases of expansion were linked but the second period did not simply replicate the medieval experience. Medieval expansion occurred as farmers, merchants, and missionaries reduced forests to farmland and pasture, created new towns, and converted the peoples encountered along the frontiers to Christianity. Later colonizers subsequently adapted the medieval experience to suit their new frontiers in the New World.

13. **Smart Adaptive Systems on Silicon** Maurizio Valle, 2004-10-18 Intelligent/smart systems have become common practice in many engineering applications. On the other hand, current low cost standard CMOS technology (and future foreseeable developments) makes available enormous potentialities. The next breakthrough will be the design and development of smart adaptive systems on silicon i.e. very power and highly size efficient complete systems (i.e. sensing, computing and actuating actions) with intelligence on board on a single silicon die. Smart adaptive systems on silicon will be able to adapt autonomously to the changing environment and will be able to implement intelligent behaviour and both perceptual and cognitive tasks. At last, they will communicate through wireless channels, they will be battery supplied or remote powered (via inductive coupling) and they will be ubiquitous in our every day life. Although many books deal with research and engineering topics (i.e. algorithms, technology, implementations, etc.) few of them try to bridge the gap between them and to address the issues related to feasibility, reliability and applications. Smart Adaptive Systems on Silicon, though not exhaustive, tries to fill this gap and to give answers mainly to the feasibility and reliability issues. Smart Adaptive Systems on Silicon mainly focuses on the analog and mixed mode implementation on silicon because this approach is amenable of achieving impressive energy and size efficiency. Moreover, analog systems can be more easily interfaced with sensing and actuating devices.
