Aircraft of the Luftwaffe, 1935-1945 Jean-Denis G.G. Lepage, 2009-01-29 One of the most significant innovations in modern warfare has been the appearance and development of air power, a technology which demanded technical and financial investment on a whole new scale and which ultimately changed the fundamental nature of war itself. This book covers the history and development of the German air force from 1935 to 1945, with descriptions and illustrations of almost all of the Luftwaffe's airplanes, including fighters, jet fighters, dive-bombers, ground attackers, medium and heavy bombers, jet bombers, seaplanes, flying boats and carrier planes, transport and gliders, reconnaissance and training aircrafts, helicopters, and many futuristic projects and other rarities.

Focke Wulf Jet Fighters Justo Miranda, 2017-12-14 The biggest success of the Focke Wulf company during the Second World War was the choice of a radial engine for the Fw 190 fighter, in this way avoiding to compete against Messerschmitt for the in line engines. The decision of the Oberkommando der Luftwaffe to assign the few turbojets available to the Messerschmitt and Arado firms and the discovery of the terrible aerodynamic effect known as compressibility buffeting by mid-1942, made the life of fighter designers of the time very interesting. The Kurt Tank team proposed to install a centrifugal turbojet of his design in the nose of an Fw 190 A/3 with the intention of replacing it with a Jumo 004 B when available in 1943. Several designs followed that were able to use all turbojets, turboprops, ramjets and rocket engines, either projected or at their disposal. They constitute the documental foundation of this book. After failing in the TL Jagdfleugzeug contests in March 1943, Volksflugzeug in September 1944 and Hochleistungs Nachtjäger in January 1945, Focke Wulf could finally overcome its competitors with the great Jägernotprogramm design Ta 183. Although it was too late to intervene in the Second World War, it served as inspiration for numerous designs of other countries during the first years of the Cold War.

Bibliography, Rotary Wing Aircraft United States. Army Air Forces. Matériel Command. Library, 1944 The Technical Data Library, Wright Field, Ohio, compiled this bibliography for the engineers engaged in rotary wing aircraft projects at the Matériel Command. Because of the extensive literature on rotary wing aircraft and the interest resulting from recent developments, the bibliography is being given a wide distribution. Since periodicals are shelved collectively in chronological order in research libraries, the references in this work have been arranged in a similar order. They are not arranged alphabetically, but begin with the magazine of earliest date and proceed in that manner. Of great aid in compiling this work were the Industrial Arts index and the Engineering index. Due to the fact that these indexes list the articles that appear in so great a variety of magazines, not all of the material listed in the bibliography is available at the Wright Field Library.

Luftwaffe Advanced Aircraft Projects to 1945 Ingolf Meyer, 2006 A highly illustrated history of German experimental secret project fighters and ground-attack aircraft in alphabetical order starting with those manufactured by Arado and ending with Junkers. This first volume in a new series reveals a remarkable range of secret projects and experimental aircraft that did not appear in the very popular Luftwaffe Secret Projects series. Aircraft, projects and designs are detailed, with approximately 175 color illustrations. Historians, aviation enthusiasts, and modelers will find this book a valuable resource.

Aircraft Anatomy of World War II Paul Eden, Soph Moeng, 2016-01-25 Full specifications for each aircraft including dimensions, powerplant, weight, performance, and armament.

Bibliography of Aeronautics United States. National Advisory Committee for Aeronautics, 1936

Arming the Luftwaffe Daniel Uziel, 2011-11-16 During World War II, aviation was among the largest industrial branches of the Third Reich. About 40 percent of total German war production, and two million people, were involved in the manufacture of aircraft and air force equipment. Based on German records, Allied intelligence reports, and eyewitness accounts, this study explores the military, political, scientific and social aspects of Germany's wartime aviation industry: production, research and development, Allied attacks, foreign workers and slave labor, and daily life and working conditions in the factories. Testimony from Holocaust survivors who worked in the factories provides a compelling new perspective on the history of the Third Reich.

X-Planes Manfred Griehl, 2012-10-24 Renowned German aviation specialist Manfred Griehl has collected a unique and valuable selection of photographs of Luftwaffe projects that never made it into battle. They remained on the drawing board or at prototype stage either because they were deemed unsuitable or the developers simply ran out of time and the projects never went into production. Most photographs come from the development sites and testing grounds of the major manufacturers of Nazi Germany: companies such as Dornier, Junkers, Focke-Wulf and Heinkel all received funding from the government to develop bigger and faster aircraft. A huge amount of private testing went on with major organizations such as Daimler-Benz, BMW and Siemens investing huge amounts in new engine systems and other advances such as radar. This book also details the innumerable alterations that were made to existing service aircraft to equip them for new roles. There are examples of Fw190s developed for the delivery of chemical and toxic weapons, the high altitude Junkers EF 61, the early prototype WNF 342 helicopter as well as numerous examples of developmental jet fighters that could very well have been realized had it not been for the effectiveness of the Allied bombing campaign in restricting the supply of necessary materials.

Focke-Wulf Fw 190 Aces of the Western Front John Weal, 2012-10-20 The Fw 190 was the scourge of Fighter Command from the moment it appeared on the Western Front at Abbeville in August 1941 with II./JG 26. A nimble, speedy and well-armed adversary, the 'Butcher Bird' quickly proved superior to all Allied fighters of the time, particularly at medium to low altitude. Led by Experten of the calibre of 'Pips' Priller, Heinz Bar and Walter Oesau, the handful of Fw 190-equipped Jagdgeschwader flew against overwhelming odds, firstly on the Channel coast, and then in direct defence of the Reich when the Jagdflieger took on the might of the USAAF's Eighth and Ninth Air Forces.

This is their story.

Arizona Warplanes Harold A. Skaarup, 2010-04-02 This aviation handbook is designed to be used as a quick reference to the classic military heritage aircraft that have been restored and preserved in the state of Arizona. The aircraft include those flown by members of the United States Air Force, the United States Navy, the United States Army, the United States Marine Corps, the United States Coast Guard, the Air and Army National Guard, and by various NATO and allied nations as well as a number previously operated by opposition forces in peace and war. The interested reader will find useful information and a few technical details on most of the military aircraft that have been in service with active flying squadrons both at home and overseas. 100 selected photographs have been included to illustrate a few of the major examples in addition to the serial numbers assigned to American military aircraft. For those who like to actually see the aircraft concerned, aviation museum locations, addresses and contact phone numbers have been included, along with a list of aircraft held in each museum's current inventory or on display as gate guardians throughout the State of Arizona. The aircraft presented in this edition are listed alphabetically by manufacturer, number and type. Although many of Arizona's heritage warplanes have completely disappeared, a few have been carefully collected, restored and preserved, and some have even been restored to flying condition. This guide-book should help you to find and view Arizona's Warplane survivors.

International Warbirds John C. Fredriksen, 2001-08-01 In depth descriptions and photographs of the aircraft of 21 nations presented with a unique human dimension that goes behind the machines to the people involved. Invaluable for specialists, accessible to enthusiasts, *International Warbirds: An Illustrated Guide to World Military Aircraft, 1914-2000* puts the most legendary fighter aircraft of the 20th century developed outside the United States on vivid display. It offers 336 illustrated biographies of the most significant warplanes used in squadron service from World War I to the Balkan conflict, including numerous models from Great Britain, France, Russia, and Japan, as well as notable machines from Israel, Canada, China, India, Brazil, and other nations. Entries span the history and scope of military aircraft from bombers and fighters to transports, trainers, reconnaissance craft, sea planes, and helicopters, with each capsule history combining nuts-and-bolts technical data with the story of that model's evolution and use. Together, these portraits offer an exciting, well-researched tribute to visionary designers and builders as well as courageous pilots and crews across the globe, and tell a vivid tale of how air power became such a decisive factor in modern warfare.

Fighting Cockpits Donald Nijboer, 2016-06 Jump into the cockpits of fighter aircraft from WWI to modern day. Incredible photography of the MiG, Messerschmitt, Tomcat, and many more.

Focke Wulf FW 190 Krzysztof Janowicz, 2010-01-05 * Includes a free decal sheet in 1:48 and 1:72 scales The first part of a monograph on the German fighter plane Focke-Wulf Fw 190 discusses the origins and development of versions A, F, G and S, which fighter, assault, fighter-bomber, reconnaissance and trainer production variants and prototypes are specified and described, including technical specifications and changes made in all sub-variants and conversions. Lists all used types of armament: shooting weapons, bombs, missiles and torpedoes. Contains the production list of Fw 190A with serial numbers and technical data on each variant. In a separate chapter, the author describes camouflage and markings of Fw 190s used in combat units on the basis of concrete examples. 96 pages, 91 photos, 24 sheets of 1:48 and 1:72 scale drawings with specification of external changes on production-run versions of the aircraft, 11 pages of color illustrations with 28 examples of camouflage schemes. Free 1:48 and 1:72 decals for 4 schemes: Fw 190 A-4, W.Nr. 7328, 'Yellow 10' of 6./JG 1, Woernsdrecht (Netherlands), April 1943. Fw 190 A-7/R6, 'Red 8', flown by Fw. Hartkopf of JGr 10, Parchim (Germany), Summer 1944. Fw 190 A-8/R2, 'Yellow 17', flown by Uffz. Willi Unger of 12./JG 3, Barth (Germany), May 1944. Fw 190 A-8, 'Red 11' of JGr 10, Parchim (Germany), Autumn 1944. About the Series Monographs focuses on an individual type of aircraft. Each monograph contains descriptions of the aircraft's origin, its variants and combat history. Each volume includes several hundred archive photographs, technical scale drawings and color profile artwork. Each book also has free extras for modelers, with decals and masking foil.

Secret Projects of the Luftwaffe - Vol 1 - Jet Fighters 1939 -1945 Dan Sharp, 2020-09-22 Germany's air ministry was quick to grasp the potential of the jet engine as early as 1938 and by 1939 several German aircraft manufacturers were already working on fighter designs that would utilize this new form of propulsion. Rocket engines too were seen as the way of the future and companies were commissioned to design fighters around them. As the Second World War began, the urgent need to bring these advanced new types into production saw a host of innovative aircraft designs being produced which would eventually result in Messerschmitt's Me 262 jet fighter and the Me 163 rocket-propelled interceptor. And as the war progressed, efforts were increasingly made to find better ways of utilizing jet, rocket and latterly ramjet engines in fighter aircraft. Aviation companies from across Germany set their finest minds to the task and produced some of the most radical aircraft designs the world had ever seen. They proposed rotating wing ramjet fighters, arrowhead-shaped rammers, rocket-firing bat-winged gun platforms, sleek speed machines, tailless flying wings, tiny mini fighters and a host of others ranging from deadly looking advanced fighters to downright dangerous vertical launch interceptors. *Secret Projects of the Luftwaffe Volume 1: Jet Fighters 1939-1945* by Dan Sharp, based on original research using German wartime documents, offers the most complete and authoritative account yet of these fascinating designs through previously unseen photographs, illustrations and period documentation from archives around the world.

The World's Greatest Military Aircraft Thomas Newdick, 2015-07-15 *Military Aircraft* features 52 of the most important military aircraft, from biplane fighters to tactical bombers, transports, multirole fighters and stealth bombers. Packed with over 200 illustrations, each entry includes a description of the model's development and history, a profile view, key features and specifications.
