Effectiveness of Foot Reflexology VS Hot Footbath on Premenstrual Syndrome and Depression Among Adolescent Girls Cinu Abdeesso,2023-04-03 The word adolescence comes from 'adoloscere' a Latin word which means 'to come to maturity'. It is a period of spectacular growth and development. In this period a change over takes place from childhood to adulthood and is a very imperative and sensitive period of one's life. This transition from childhood to adulthood involves dramatic physical, sexual, psychological and social developmental changes and it poses risks to their health and wellbeing. According to the World Health Organization's expert committee (WHO,2018) adolescence is defined as the period in human growth and development that occurs after childhood and before adulthood, from ages 10 to19 and account for more than 1/5thof the world's population. There are about 350 million adolescents comprising about 22% of the population in the countries of South East Asia region. Biological processes constrain many aspects of this growth and development, with the onset of puberty marking the passage from childhood to adolescence. It is a time period of life with special health and developmental needs and rights. It is also a time to acquire knowledge and skills, learn to manage feelings, emotions and relations, and acquire attributes and abilities.

Precision Dairy Farming 2016 Claudia Kamphuis,Wilma Steeneveld,2023-09-04 The supply of new innovative precision dairy farming technologies is steadily increasing. It aims to help farmers to be more labour efficient and to support them in their daily management decisions. At the same time, since many technologies are developed from an engineering perspective, adoption of these technologies is sometimes limited since knowledge on economic benefits and farmers' needs is often incomplete. This book covers the current status of precision dairy farming technologies and what farmers expect from them. It also includes insights and future perspectives on managing, analysing, and combining sensor information. Moreover, new innovative ideas that may better fit farmers' needs and expectation are introduced, ranging from technologies or innovations that aim at improved animal health and welfare, to those technologies that result in a more efficient use of feed and improved grazing management. This book is unique because science and engineering are combined to develop precision dairy farming technologies that are to be applied in practice. The book will serve as a stepping stone for new and innovative ideas within this rapidly growing area within dairy farming.

EFFICACY OF WARM FOOT BATH AMONG CHILDREN Smt. Bedre Suwarna Shriram, 2023-03-29 A warm foot bath is a traditional home remedy used to relieve various conditions such as stress, fatigue, insomnia, and pain. This therapy involves immersing the feet in warm water for a specific period, usually between 10 to 30 minutes. The warmth of the water helps to relax the muscles, increase blood flow, and promote overall relaxation. In recent years, there has been increasing interest in the use of warm foot baths as a complementary therapy for children. This article will explore the efficacy of warm foot baths among children in 1000 words. Studies have shown that warm foot baths can be beneficial for children in various ways. For example, a study published in the Journal of Korean Academy of Nursing showed that warm foot baths can help to improve sleep quality in children with sleep disturbances. The study involved 60 children between the ages of 6 and 12 who were randomly assigned to either a warm foot bath group or a control group. The warm foot bath group received a 20-minute foot bath at 40°C every night for two weeks, while the control group received no intervention. The results showed that the warm foot bath group had significant improvements in sleep quality compared to the control group. The researchers suggested that warm foot baths may help to relax the body and mind, leading to better sleep quality. Another study published in the Journal of Alternative and Complementary Medicine showed that warm foot baths can help to reduce pain in children with acute gastroenteritis. The study involved 100 children between the ages of 3 and 12 who were randomly assigned to either a warm foot bath group or a control group. The warm foot bath group received a 10-minute foot bath at 40°C every four hours for two days, while the control group received no intervention.

Integrating Clinical Aromatherapy in Palliative Care Carol Rose, 2023-05-18 By bridging the gap between conventional medical interventions and complementary approaches using aromatherapy, palliative care nurse and clinical aromatherapist, Carol Rose, demonstrates how an integrated and evidence-based approach can have the most significant impact on quality-of-life in patients with life-limiting illness. Aromatherapy is already a fundamental practice in many palliative care settings but its benefits remain under-researched and under-represented. Each chapter of this book incorporates a person-centred focus to consider the integration of various aromatherapy approaches for a range of end-of-life symptoms, alongside conventional medical options. The specificity of this approach and the emphasis of empowering patients to be involved in the process of choosing oils and applications, allows for improved results in the palliation of common symptoms. Integrating Clinical Aromatherapy in Palliative Care has a foundation in research from the patient's point of view. The result is a fresh perspective that prioritises support of patient choices, skilful communication and individualised care, alongside the judicious use of essential oils and other botanical products. Collectively, aromatherapy can completely reframe holistic care to allow for greater emotional, social and spiritual expression.
