The A-Z of Grand Prix Charlie Morgan,2009-01-05 Formula One, F1 racing is one of the most exciting, and expensive, sports in the world. Governed by the Fédération Internationale de l'Automobile (FIA), the stakes are high for drivers, constructors and sponsors alike and the economic effect of the sport across the globe is significant. Divided into two World Championships (for drivers and constructors), Grands Prix are usually held on purpose-built circuits, however, some races are run over closed public roads. The Grand Prix de Pau in 1901 was the first race to be given a name that is synonymous with motoring racing the world over today. On June 26, 1906, an event near Le Mans in France with a starting field of 32 cars, raced a 65 mile (105 km) triangular course over two days. From this point on, the Grand Prix in Le Mans signaled the start of an era, and the sport celebrated its centenary in 2006. This A-Z gives an insight into the drivers, constructors, the dangers and the excitement of one of the world's most renowned sports.

Action shots demonstrate the principles of the turbocharged F1 car, presenting the technology in a package that's understandable and invaluable to any F1 enthusiast.

Lacrimal Gland, Tear Film, and Dry Eye Syndromes David A. Sullivan,2012-12-06 During the past decade a significant international research effort has been directed towards understanding the composition and regulation of the precocular tear film. This effort has been motivated by the recognition that the tear film plays an essential role in maintaining corneal and conjunctival integrity, protecting against microbial challenge and preserving visual acuity. In addition, research has been stimulated by the knowledge that alteration or deficiency of the tear film, which occurs in countless individuals throughout the world, may lead to desiccation of the ocular surface, ulceration and perforation of the cornea, an increased incidence of infectious disease, and potentially, pronounced visual disability and blindness. 7 To promote further progress in this field of vision research, the International Conference on the Lacrimal Gland, Tear Film and Dry Eye Syndromes: Basic Science and Clinical Relevance was held in the Southampton Princess Resort in Bermuda from November 14 to 17,

1992. This meeting was designed to assess critically the current knowledge and 'state of the art' research on the structure and function of lacrimal tissue and tears in both health and disease. The goal of this conference was to provide an international exchange of information that would be of value to basic scientists involved in eye research, to physicians in the ophthalmological community, and to pharmaceutical companies with an interest in the treatment of lacrimal gland, tear film or ocular surface disorders (e. g. Sjogren's syndrome).

Strategic System Assurance and Business Analytics P. K. Kapur,Ompal Singh,Sunil Kumar Khatri,Ajit Kumar Verma,2020-06-19 This book systematically examines and quantifies industrial problems by assessing the complexity and safety of large systems. It includes chapters on system performance management, software reliability assessment, testing, quality management, analysis using soft computing techniques, management analytics, and business analytics, with a clear focus on exploring real-world business issues. Through contributions from researchers working in the area of performance, management, and business analytics, it explores the development of new methods and approaches to improve business by gaining knowledge from bulk data. With system performance analytics, companies are now able to drive performance and provide actionable insights for each level and for every role using key indicators, generate mobile-enabled scorecards, time series-based analysis using charts, and dashboards. In the current dynamic environment, a viable tool known as multi-criteria decision analysis (MCDA) is increasingly being adopted to deal with complex business decisions. MCDA is an important decision support tool for analyzing goals and providing optimal

solutions and alternatives. It comprises several distinct techniques, which are implemented by specialized decision-making packages. This book addresses a number of important MCDA methods, such as DEMATEL, TOPSIS, AHP, MAUT, and Intuitionistic Fuzzy MCDM, which make it possible to derive maximum utility in the area of analytics. As such, it is a valuable resource for researchers and academicians, as well as practitioners and business experts.

Climatic Variability in Sixteenth-Century Europe and Its Social Dimension Christian Pfister, Rudolf Brázdil, Rüdiger Glaser, 2013-03-14 A multidecadal cooling is known to have occurred in Europe in the final decades of the sixteenth-century. It is still open to debate as to what might have caused the underlying shifts in atmospheric circulation and how these changes affected societies. This book is the fruit of interdisciplinary cooperation among 37 scientists including climatologists, hydrologists,

glaciologists, dendroclimatologists, and economic and cultural historians. The known documentary climatic evidence from six European countries is compared to results of tree-ring studies. Seasonal temperature and precipitation are estimated from this data and monthly mean surface pressure patterns in the European area are reconstructed for outstanding anomalies. Results are compared to fluctuations of Alpine glaciers and to changes in the frequency of severe floods and coastal storms. Moreover, the impact of climate change on grain prices and wine production is assessed. Finally, it is convincingly argued that witches at that time were burnt as scapegoats for climatic change.

Intracellular Lipid Transport Guillaume Drin, 2019-02-21 This detailed book provides technical approaches to tackle a variety of questions related to intracellular lipid transport in order to improve our understanding at different scales of how lipids are accurately displaced between organelles, across long distances or at membrane contact sites, or within cellular membranes. The volume begins with methodologies to measure the movement of varied lipid species between or in organelle membranes, inside eukaryotic cells, including plant cells, or in bacteria, and continues in vitro or in silico approaches aiming to define, more from a biochemical and structural standpoints, how lipid transfer proteins (LTPs) or flippases/scramblases precisely function. Written for the highly successful Methods in Molecular Biology series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, *Intracellular Lipid Transport: Methods and Protocols* serves as an ideal guide for researchers seeking to shed light on diverse aspects of this critical and often elusive cellular process.
