Time in Language Wolfgang Klein,2013-09-13 This book looks at the various ways in which time is reflected in natural language. All natural languages have developed a rich repertoire of devices to express time, but linguists have tended to concentrate on tense and aspect, rather than discourse principles. Klein considers the four main ways in which language expresses time - the verbal categories of tense and aspect; inherent lexical features of the verb; and various types of temporal adverbs. Klein looks at the interaction of these four devices and suggests new or partly new treatments of these devices to express temporality.

The Expression of Time Wolfgang Klein,Ping Li,2009-03-26 Time is the most fundamental category of human cognition and action, and all human languages have developed many devices to express it. These include verbal categories, such as tense and aspect, but also adverbials, particles, and principles of discourse organisation. This book is intended as a tutorial for the study of how time is expressed in natural languages. Its chapters take the reader through a number of foundational issues, such as the various notions of time and the various means to express it; other chapters are devoted to more specific questions, such as the acquisition of time, its modelling in formal semantics and in computational linguistics, or how its expression can be empirically investigated.

The Semantics of the Future Bridget Copley,2009-01-13 This book builds a semantics for several kinds of future-referring expressions, including will sentences, be going to sentences, and futurates. While there exists previous work on future-referring expressions, this is the first treatment of such a variety of expressions in a formal semantic framework. Arguments presented herein explicate the meanings of these expressions, and account for similarities and differences among them. Shared is a future-oriented model with a systematic alternation between inertial and bouletic ordering sources that provide a new way of understanding the age-old future Law of the Excluded Middle, evident in all of the future-referring expressions. A difference found among these meanings is the presence or absence of progressive- or generic-like aspect in a position higher than the future modal. These very high aspectual operators affect the temporal argument of the modal's accessibility relation, with detectable effects that can be used to determine scope relations in future conditionals. Copley's analysis thus addresses a number of issues of great interest to formal semanticists, from modal and aspectual semantics, to the mapping of functional elements in

the clause, to the logical form of conditionals.
