Industry and Economic Decline in Seventeenth-century Venice Richard T. Rapp,1976 One of the oldest, most commanding topics in early modern economic history--Venice's fall from commercial supremacy to relative insignificance--is here examined. What emerges is what many scholars have come to suspect: the catch-all phrase the decline of Venice embodies a myth. Rapp explains the paradox of seventeenth-century Venice, a republic that experienced a relative economic decline in commerce and industry with no absolute decline in overall income. In this systematic approach to the subject of economic decline, Rapp focuses on economic factors common to all Venetian enterprise: labor supply and quality, technology and capital employment, foreign demand, and government policy. The statistical backbone of this massively documented book is an employment census of the city derived from the records of the Naval Personnel Administration, the Collegio da Milizia da Mar. Throughout the book, many analytical insights are offered about population, guilds, technology, and economic policy in early modern Europe.
