American Wheeled Armoured Fighting Vehicles Michael Green,2016-10-31 Numerous wheeled armoured fighting vehicles have seen service in the US armed forces on and off for over 80 years. There have been various changes of policy and twice, after the Second World War and Vietnam, they went out of favour but their use is now well established. This well researched and superbly illustrated book describes all the different types and variants since the first M1 was ordered in 1931. The M8 armoured car was widely used during World War Two but it was not until Vietnam that further wheeled AFVs came into service, notably the M706 armoured car. After a lull the US Marine Corps adopted the Light Armoured Vehicle (LAV) in 1983. The US Army first used armoured Humvees in 1994 and variants remain in service (M1141 and M1116). Other types today include the Guardian (M1117) and the Army version of the LAV names the [Stryker]. To meet the operational requirements of Iraq and Afghanistan the Mine Resistant Ambush Protected vehicle (MRAP) was ordered in bulk from 2007.

Early US Armor Steven J. Zaloga,2018-02-22 The first American armoured cars began to emerge around the turn of the century, seeing their first military use in 1916 during the Punitive Expedition against Pancho Villa. When the United States entered World War I, the American Expeditionary Forces used some armoured cars in France, and American armoured cars were used by the French Army. The inter-war years saw considerable innovation and experimentation in armoured car design. Of the 1930s scout car designs, the M3A1 scout car was good enough to be produced in very large numbers in World War II, and was widely exported to many other armies via Lend-Lease. It also served as the basis for the late M2 and M3 armoured half-tracks. In this study, using detailed full colour plates and rigorous analysis, US armour expert Steven J. Zaloga chronicles the development of the US armoured car in the years leading up to World War II.

Staghound Armored Car 1942-62 Steven J. Zaloga,2011-12-20 The Staghound was a unique World War II armored vehicle designed and manufactured in the US, but intended solely for the British army. Since its combat debut in Italy in 1943 until the end of the war it had performed particularly valuable service in a reconnaissance role where its speed and armor ensured that it was able to extricate itself from trouble as required without additional support. This book examines the development of this category of armored cars and offers a detailed analysis of the extensive combat use of the Staghound in British service as well as in the service of other Allied countries including Canada, New Zealand and Poland.

Russian Motor Vehicles Maurice A. Kelly,2009-07 There has been nothing published outside of Russia concerning the activities of its motor industry, by 1937 the Soviets had become the largest producers of motor vehicles in Europe, albeit with the help of Henry Ford The author decided to concentrate on the work of the pioneers in Czarist Russia, for their efforts were more diverse than those of their counterparts in the Soviet era. However, one Soviet motor car which was an indigenous product has been included to illustrate how the industry might have evolved if Henry Ford had not been approached. This is a comprehensive overview of all facets of vehicle production from the early days to the final demise of the Soviet Union. All the manufacturers of motor vehicles, certain accessories, military machines, and even aero engines are recorded in this unique book.

Soviet Armoured Cars 1936-45 Jamie Prenatt,2020-10-29 The armoured car has an important place in the early history of Soviet armoured fighting vehicles (AFVs) – they were the most important AFV during the Russian Civil War and figured prominently in the mechanization of the Red Army that began in late 1929. The 1930s saw the development and production of a wide variety of armoured cars, which were used extensively in Soviet conflicts from then on. They saw service in the Spanish Civil War, in the 1939 Manchurian conflict with Japan, and in the occupation of the Baltic states and the invasion of Poland and Finland. Although many of its armoured cars were lost in the early months following the German invasion in June 1941, Russia continued with its armoured car development program, and the final model, the BA-64, was accepted for service in 1942 with over 9,000 built before production ended in 1946. This detailed book provides a survey of Russian armoured cars from 1936 to 1945, focusing on the history, design, and specifications of the wheeled armoured cars that entered series production, including the rail variants and tracked BA-30. Packed with photographs, cross-sections, and stunning battleplates, this is a comprehensive guide to some of the Red Army's fastest AFVs.

M8 Greyhound Light Armored Car 1941-91 Steven J. Zaloga,2012-09-20 The M8 light armored car was the only significant wheeled combat vehicle used by the US Army in World War II. In conjunction with the lightly armed utility version, the M20, it was the staple of the army's cavalry squadrons for use in reconnaissance and scouting. First entering combat in Italy in 1943, it was widely used throughout the campaign in northwest Europe, though its off-road performance was found to be wanting. This title describes the design and development of the M8, covering the many variants that were produced during World War II and afterwards, along with a comprehensive survey of its operational use.

The Rolls-Royce Armoured Car David Fletcher,2012-04-20 The first Rolls-Royce armoured car was a privately owned vehicle fitted with a machine-gun and a limited amount of armour plate, used by the Royal Naval Air Service in Flanders in 1914. By 1915, nearly 100 had been built and turned over to the Army. From then on, as Sir Albert Stern said 'They searched the world for war', operating as far apart as the northwest frontier of India, the Middle East and southern Africa. The cars were fast, quiet and reliable but above all powerful. 'A Rolls in the desert is above rubies,' said Lawrence of Arabia. After World War I, the War Office continued to produce the Rolls-Royce while tinkering with the design. These further cars served all across the Empire, including in Ireland and even later Shanghai, returning for a final brief appearance in the early stages of World War II.This book tells the complete story of the Rolls-Royce Armoured Car, following its design and development as it fought from theatre to theatre during World War I and the turbulent inter-war years.

Armored units of the Baltic republics Estonia-Latvia-Lithuania Carlo Cucut,2022-03-28 After declaring independence in 1918, the fledgling armed forces of Estonia, Latvia and Lithuania managed to defeat the Red Army. During the war, the first armored units were formed, equipped with vehicles conquered from the enemy or handed over by the British. After the conflict, those initial departments were strengthened with the purchase of tanks and armored cars, to form armored-armored components subsequently incorporated by the Soviets in 1940, after the annexation to the Soviet Union.

Armored Car R. P. Hunnicutt,2015-09-15 The armored car has played a major role in American military operations since the relatively early days of the 20th Century. In 1989 Col. Royal P. Davidson arranged for the installation of a .30 caliber Colt machine gun on a Duryea light three-wheeled car. In doing so, he jump-started the development and production of armored fighting vehicles that have served in the American military ever since. Although the very first armored cars were merely outfitted with a gunshield, they were soon fully protected by armor plating. In this installment of R. P. Hunnicutt's 10-volume series on the history of American armored vehicles he details their early development through WWI, WWII, Korea, and Vietnam. Beginning with the development of armored cars on American soil at the outbreak of WWI-although none were ever shipped overseas-Hunnicutt goes on to describe the production of armored cars based on commercial car and truck chassis in the 1920s. These vehicles eventually reached limited production as the armored car M4. With detailed drawings and photographs to illustrate the history, Hunnicutt describes the development of the armored car T3, which was also designated as scout car T1. The development of these lightweight scout cars, which met the needs of the cavalry, made the armored car unnecessary by 1937. Although production of armored cars stopped for the American military, American development continued on armored cars intended for British use. However, in 1942 as the Palmer Board decided to limit the weight of reconnaissance vehicles, the light armored car T22E2 was standardized as the M8 and put into production. The M8 and a variation, the M20, served in the U.S. Army until after the Korean War, with new models developed for use in Vietnam. Spanning the history of American wheeled combat vehicles, Hunnicutt's Armored Car is a must have for anyone with a keen interest in the history of American military operations and equipment. War Cars David Fletcher,1987
Armored Units of the Russian Civil War David Bullock,2013-02-20 By 1920 the Red Army of Russia fielded an overwhelming array of armored cars, armored trains and tank detachments. These armored units played an important part in consolidating the newly won Bolshevik empire in the early 1920s; as a consequence of the fact that railways were the strategic arteries that essentially controlled Russia, armored trains have never played such a significant role in military history as they did in the Russian Civil War. This title details the management, construction, repair, personnel, training and combat of the Red Army's armored units on all fronts, including such famous vehicles as Trotsky's armored train.

Russian Tanks, 1900-1970 John Milsom,1971
European Powers in the First World War Spencer Tucker,2018-12-07 First published in 1996. The First World War was the single most important event of the twentieth century. This volume concentrates on non-U.S. aspects of the conflict. Organized alphabetically, its more than 600 detailed entries offer information and insight on such subjects as the causes of the conflict, major battles and campaigns, weapons systems (including military aviation, chemical warfare, the submarine, and the tank), and the terms of the peace. Some 350 biographies provide information on the roles played in the conflict by generals, admirals, and civilian leaders. There are also biographies of individuals who were shaped by the war, such as Charles De Gaulle, Adolf Hitler, Benito Mussolini, and Joseph Stalin; essays on each of the countries involved in the conflict; new appraisals of such subjects as military medicine and artillery tactics; and essays on such diverse subjects as art, literature, and music in the war. Each entry has references for additional reading, and a subject index provides easy access. The volume is an excellent reference source for scholar and neophyte alike.

T-34 Wolfgang Fleischer,2020-10-30 The T-34 was one of the most remarkable tanks of the Second World War. Although the Red Army suffered continual heavy tank losses, the rugged and reliable T-34 was an immense success story and was ultimately instrumental in turning the tide of the war.This photographic history follows the story of this exceptional armoured vehicle from its disastrous first action during Operation Barbarossa to its miraculous defence of Moscow, its envelopment of the Axis forces at Stalingrad and victory at Kursk, and finally, the advance to the gates of Warsaw then on to Berlin.Packed with a wealth of images, including rare archive photographs and photographs of surviving examples, this is an extraordinary record of both the tank and its personnel. The accompanying text features an in-depth technical evaluation outlining the differences in the myriad of models, including detailed plans of each type, alongside a gripping breakdown of the tank's entire operational history.

The Nazi Occult Kenneth Hite,2013-06-20 In the dark dungeons beneath Nazi Germany, teams of occult experts delved into ancient and forbidden lore, searching for lost secrets of power. This book tells the complete history of the Nazi occult programs, from their quests for the Ark of the Covenant, the Spear of Destiny, and the Holy Grail, through their experiments with lycanthrope and zero-point energy. It also includes information on the shadow war fought in the dying days of the Reich as the Nazis deployed strange flying saucers that battled to save their final stronghold in the Antarctic. For years, the Allied governments worked to keep this information from reaching the public, and sought to discredit those few who dared to seek the truth. Now, using a combination of photography and artwork reconstructions, the true story of the most secret battles of World War II can finally be told.
