**The Gas Vans** Santiago Álvarez (Writer of The gas vans),Pierre Marais,2016  
During WWII, German forces are claimed to have used trucks to kill tens of thousands of people by means of exhaust gases. This books is the first to critically investigate all the accessible evidence about this topic. The anomalies exposed by this study raise doubts about the historical reality of these infamous gas vans.

**Natural Gas and Renewable Methane for Powertrains** Richard van Basshuysen,2016-02-04 This book focuses on natural gas and synthetic methane as contemporary and future energy sources. Following a historical overview, physical and chemical properties, occurrence, extraction, transportation and storage of natural gas are discussed. Sustainable production of natural gas and methane as well as production and storage of synthetic methane are scrutinized next. A substantial part of the book addresses construction of vehicles for natural and synthetic methane as well as large engines for industrial and maritime use. The last chapters present some perspectives on further uses of renewable liquid fuels as well as natural gas for industrial engines and gas power plants.

**Gas Van Driver** Martin E Eigenberger,2023-12-13 The Summer of Love... The Holocaust. He will come of age on the road. A distinctive road that

transports him across time, into the dark heart of human horror-and the bright flash of another world. Heath, a middle-class boy, grows up in middle America, has a fascination with World War II, and wishes he could have been in it. In the summer of 1967, he sets out for manhood, adventure, and a girl in San Francisco. He does not arrive. Instead, destiny puts him in a truck with Aleksandras, a tormented ex-Nazi in search of an exit. Gas Van Driver is a slow-burn novel that spirals like a ball in a gravity well, pulling the protagonist inexorably into the atrocities of Nazi-occupied Poland. He must confront guilt, and whether evil is stronger than good. And whether or not human existence is ultimately futile.

Gasification is a process that if properly utilized can transform the world

in which we live. Comprehensive in its coverage, this second edition continues the tradition of the first by providing engineers and scientists with an up-to-date overview of commercial processes and applications relevant to today's demands. Gasification, 2nd edition is expanded and provides more detail on the integration issues for current generation, state-of-the-art Integrated Gasification Combined Cycles (IGCC); CO<sub>2</sub> capture in the IGCC context addressing the issues of pre-investment and retrofitting as well as defining what the term CO<sub>2</sub> capture ready might mean in practice; issues of plant reliability, availability and maintainability (RAM) including as evaluation of feedback from existing plants; implementation of fuel cell technology in IGCC concepts. All statistics, processes and projects, including descriptions of a number of processes not covered in the previous edition. \*Up-to-date overview of commercial processes \*Covers applications relevant to today's demands \*Addresses the issues of pre-investment and retrofitting \*Provides more detail on the integration issues for Integrated Gasification

**Introduction to the Global Oil & Gas Business** Samuel Van Vactor, 2010 To the casual observer, the oil business seems constant and unchanging. Most gasoline stations have done away with attendant services, and credit cards are accepted directly at the pump, but drive-in access and brand names remain largely as they have been for generations. The faade, however, is just that; it is like the false front of a Western town put in place to make everything seem bigger and grander than it really is. The familiarity of the oil industry's retail outlets masks extraordinary changes in how the industry engages in its four primary sectors of activity: finding and producing crude

oil, transportation, refining, and marketing.

**Improving Fuel Cycle Design and Safety Characteristics of a Gas Cooled Fast Reactor** Willem Frederik Geert van Rooijen, 2006 The Generation IV Forum is an international nuclear energy research initiative aimed at developing the fourth generation of nuclear reactors, envisaged to enter service halfway the 21st century. One of the Generation IV reactor systems is the Gas Cooled Fast Reactor (GCFR), the subject of study in this thesis. The Generation IV reactor concepts should improve all aspects of nuclear power generation. Within Generation IV, the GCFR concept specifically targets sustainability of nuclear power generation. The Gas Cooled Fast Reactor core power density is high in comparison to other gas cooled reactor concepts. Like all nuclear reactors, the GCFR produces decay heat after shut down, which has to be transported out of the reactor under all circumstances. The layout of the primary system therefore focuses on using natural convection Decay Heat Removal (DHR) where possible, with a large coolant fraction in the core to reduce friction losses.

**Financing Solutions to Reduce Natural Gas Flaring and Methane Emissions**

Gianni Lorenzato, Silvana Tordo, Huw Martyn Howells, Berend van den, Sebastian Sarmiento-Saher, 2022-05-20 Global oil and gas emissions fell to historic lows in 2020 as a result of the decline in global demand associated with the COVID-19 (Coronavirus) pandemic. Data released by the International Energy Agency suggest that CO<sub>2</sub> emissions are on the rise as energy demands increase after the pandemic. Whether emissions will rebound to precrisis levels largely depends on governments' emphasis on clean energy transition in their efforts to reboot economic growth. In 2019, direct and indirect emissions from the oil and gas sector represented about 15 percent of the global energy sector's greenhouse gas emissions. More than half of these emissions came from flaring and methane released during oil and gas operations. This book aims to create awareness of the business case for reducing gas flaring and methane emissions. It provides a framework for policy makers to evaluate the feasibility and financial attractiveness of flaring and methane reduction (FMR) projects, analyzes investment barriers, and identifies key variables and success factors, backed by lessons learned from case studies. Simplified financial modeling templates are suggested to help policy makers to assess FMR options. The book focuses on mid-sized flares that collectively represent 58 percent of the global flare volumes. These flares are typically too small to be prioritized by oil companies but still allow for profitable monetization. Smaller FMR projects are unlikely to be economically viable, unless clustered in larger projects or propelled by an enabling and

compulsory regulatory framework. Large-scale capture projects require tailored projects, large ancillary infrastructure, government planning, and capital injections costing hundreds of millions of dollars. Although potentially attractive in terms of equity returns to developers, midsized flares face various barriers to the financing and execution of FMR solutions. Navigating these barriers requires project developers with specific FMR expertise, as highlighted through six detailed case studies discussed in this book.
