General Atomics Supercritical Water Oxidation Processing of Redwater from TNT Production ,2003 GA performed fourteen experimental runs between the October, 2002 and February, 2003 utilizing the SCW Test Unit during this Redwater testing program. Initial experiments processed Redwater waste simulants tailored to match the salt species and concentrations anticipated with actual Redwater. Later experiments utilized actual Redwater waste material obtained from an operational TNT production plant. The initial experiments generated the critical data needed to configure the SCW test system and optimize the processing conditions for the successful treatment of Redwater. Initial Redwater runs were of short duration to allow further fine tuning of the process parameters. Additionally, these shorter runs provided liquid and gaseous samples for analytical analysis to confirm effective Redwater processing. The program culminated in a twenty one hour test to confirm the application of the SCWO process for extended duration Redwater processing.

General Atomics Smart Microsensors FY05 Shipboard Fire Test Results ,2005 This report describes the cermet sensors and system control software recently evaluated in shipboard tests for shipboard damage control. The tests were conducted to evaluate a database of sensor responses to fire and nuisance sources for algorithm development, and to provide a basis for further refinement. In this work, the cermet sensors incorporate four sensors with multivariate analysis methods and classification algorithms for detecting a wide variety of analytes including toxic industrial chemicals, fires, and nuisance sources. The test series successfully demonstrated the functionality and performance of the microsensor system for use in fire detection. The detection system demonstrated the ability to detect flaming and smoldering fires at the same level as the commercial multicriteria detector. It was on average 2 to 3 minutes faster for flaming fires, vs. all detector types evaluated, and 7.5 to 8.3 minutes faster for smoldering fires, vs. all detector types evaluated. The system needs improvement in addressing fire-like nuisances.

Proceedings of the Fifteenth Joint Workshop on Electron Cyclotron Emission and Electron Cyclotron Resonance Heating John Lohr,2009 These proceedings present the latest results in electron cyclotron emission, heating and current drive, with an emphasis on the physics and technology of Electron Cyclotron Emission, Electron Cyclotron Heating and Electron Cyclotron Current Drive applied to magnetic fusion research. The field is a key element in the development of fusion power and the ITER project now under construction.

Review and Evaluation of Alternative Technologies for Demilitarization of Assembled Chemical Weapons National Research Council,Division on Engineering and Physical Sciences,Commission on Engineering and Technical Systems,Committee on Review and Evaluation of Alternative Technologies for Demilitarization of Assembled Chemical Weapons,1999-12-24 This report examines seven disposal technologies being considered by the U.S. government as alternative methods to the process of incineration for destroying mortars, rockets, land mines, and other weapons that contain chemical warfare agents, such as mustard gas. These weapons are considered especially dangerous because they contain both chemical warfare agent and explosive materials in an assembled package that must be disassembled for destruction. The study identifies the strengths and weaknesses and advantages and disadvantages of each technology and assesses their potential for full-scale implementation.

Management and Disposition of Excess Weapons Plutonium National Academy of Sciences,Committee on International Security and Arms Control,Panel on Reactor-Related Options for the Disposition of Excess Weapons Plutonium,1995-08-06 Within the next decade, many thousands of U.S. and Russian nuclear weapons are slated to be retired as a result of nuclear arms reduction treaties and unilateral pledges. Hundreds of tons of plutonium and highly enriched uranium will no longer be needed for weapons purposes and will pose urgent challenges to international security. This is the supporting volume to a study by the Committee on International Security and Arms Control which dealt with all phases of the management and disposition of these materials. This technical study concentrates on the option for the disposition of plutonium, looking in detail at the different types of reactors in which weapons plutonium could be burned and at the vitrification of plutonium, and comparing them using economic, security and environmental criteria.

Neuropeptide Y and Drug Development Lars Grundemar,Stephen R. Bloom,1996-11-15 Neuropeptide Y (NPY) is a ubiquitous and important messenger in the nervous system, with a wide range of physiological roles. It is involved in the body energy balance and is one of the most potent stimuli of food intake known. NPY also acts to regulate central and peripheral autonomic functions. This book, written by academic and industrial experts in the field, links the most recent basic experimental knowledge about NPY and its receptors with areas of clinical importance. This book will be of interest to those working in all areas of research affected by NPY, such as food intake and energy homeostasis, cardiovascular regulation and G-protein-coupled receptors, as well as those interested in the development of drugs as NPY targets. The hypothalamic role of NPY and its relationship with eating disorders and diabetes The sympathetic nervous system role of NPY and its involvement in cardiovascular disorders Characterization of NPY receptor types and their brain distribution, molecular biology and pharmacology Development of peptide and non-peptide receptor antagonists
