Determination of Pollutant Emissions Characteristics of General Electric CF6-6 and CF6-50 Model Engines T. F. Lyon,1980 The average levels and the variability of emissions were determined for newly manufactured General Electric CF6-6 and CF6-50 model engines. Emissions of carbon monoxide, hydrocarbons, oxides of nitrogen, and smoke were measured on a total of twenty-five engines. Emissions were measured from two separate sampling systems, one sampling in the FAA diamond pattern, and the other in the EPA cruciform pattern. Only small differences in emissions were found between the two sampling patterns. Typical variability in CF6 production engine emissions was found to be somewhat less than had been previously reported for other types of large, turbofan engines. The effect of differences in fuel types, and in idle conditions (hot or cold) on emission levels were also determined. (Author).

Jet - The story of jet propulsion Wolfgang Brix,2023-01-17 Flying is today part of our life. We can sit in comfortable seats and reach nearly every destination around the world. Few passengers know that the engines one can see through the cabin window have been invented and built and tested just 85 years ago. At the beginning there were inventors, small engines and small aircraft, which have grown in the course of decades into big aircraft, powerful engines and mighty companies.The story of this development is highly fascinating and entertaining. Who wants to know more finds in this book a lot of informations and technical details. Never before a book with this range of inventors, jet engines, jet aircraft and jet companies has been published.
