Transactions on Aspect-Oriented Software Development V

,2009-06-18 The LNCS journal Transactions on Aspect-Oriented Software Development is devoted to all facets of aspect-oriented software development (AOSD) techniques in the context of all phases of the software life cycle, from requirements and design to implementation, maintenance and evolution. The focus of the journal is on approaches for systematic identification, modularization, representation and composition of crosscutting concerns, i.e., the aspects and evaluation of such approaches and their impact on improving quality attributes of software systems. This volume, the fifth in the Transactions on Aspect-Oriented Software Development series, contains three papers submitted through the regular channel, and three papers on the special focus area of aspects, dependencies and interactions. The first two papers concentrate on applications of AOSD to the fields of scheduling of web applications and operations research, respectively, while the third paper applies the technique of bisimulation to aspect-oriented languages. The special focus area on aspects, dependencies and interactions is introduced by the guest editors Ruzanna Chitchyan, Johan Fabry, Shmuel Katz, and

Arend Rensink.

Getter Robo Devolution Vol. 2 Go Nagai, 2018-09-18 GETTER WING! Guided by a cosmic fate, the three pilots of the Getter war machines are now united. Their transforming battle mechs are all that stand between the monstrous Unevolved and the destruction of all mankind. But Saotome is still grappling with his new reality, and the expectations of his comrades. Can someone who rejected the world really be its savior? From the creative team behind the Ultraman manga!

The Noble Gases as Geochemical Tracers Pete

Burnard, 2012-12-15 The twelve chapters of this volume aim to provide a complete manual for using noble gases in terrestrial geochemistry, covering applications which range from high temperature processes deep in the Earth's interior to tracing climatic variations using noble gases trapped in ice cores, groundwaters and modern sediments. Other chapters cover noble gases in crustal (aqueous, CO₂ and hydrocarbon) fluids and laboratory techniques for determining noble gas solubilities and diffusivities under geologically relevant conditions. Each chapter deals with the fundamentals of the analysis and interpretation of

the data, detailing sampling and sampling strategies, techniques for analysis, sources of error and their estimation, including data treatment and data interpretation using recent case studies.

Getter And Getter-Ion Vacuum Pumps Georgii L.

Saksaganskii,2019-06-18 This unique monograph discusses all aspects of the design and operation of electrophysical ultrahigh-vacuum pumps (EUVP). The adsorption-diffusion model of interaction of gas molecules with metal getters is presented, together with getter films sorption characteristics. A mathematical model of molecular transfer in electrophysical pumps and the principles and criteria of their energy and structural-geometrical optimization are proposed; and the physical processes in the pumps are analyzed during the pumping out of both active and inert gases. Also presented are the generic and specific pump parameters and the methods of calculating their main characteristics. Of special interest are discussions of the design, structure, and operational features of evaporation getter and ion-getter pumps with thermal deposition of getter films; EUVP with plasma evaporation; sputter-ion pumps with and without built-in evaporators; pumping out methods based on nonevaporable getters; and implantation, membrane and catalytic pumps. This

book will appeal to experts and students in experimental physics, electronics, fusion accelerator techniques and electrophysical and vacuum apparatus design.

Learning to Request in a Second Language Machiko Achiba,2003-02-07 This book examines the acquisition of requests in English by a seven- year-old Japanese girl during her 17-month residence in Australia. The study focuses on the linguistic repertoire available to the child as she attempts to make requests and vary these to suit different goals and addressees. This book helps unravel features of pragmatic development in the child's interlanguage, a subject about which we yet know very little.
