Giant Isopods and Other Crafty Crustaceans Heidi Moore,2011-07 This book briefly examines the world and behaviors of isopods and crustaceans.

*The Giant Isopod Do Your Kids Know This?* Tanya Turner,2016-12-15 The Giant Isopod may look like a bug - but it's not (it would be a giant bug!). It's actually a crustacean, and it's distantly related to shrimps and crabs - although it doesn't look like those two either. The Giant Isopod currently holds the record as one of the biggest crustaceans - and their monstrous size is attributed to a phenomenon called deep sea gigantism. Simply put, this refers to the ability of deep sea creatures to grow larger in size compared to other species that live in shallow waters. You will be amazed at the size and appearance of this sea animal. It may be a bit strange - but it is nevertheless exciting and interesting. Today you will learn everything there is to know about this very unique sea animal called the Giant Isopod.

**Aquatic Life of the World** ,2001 Examines every major aquatic organism as well as lesser-known and rare life-forms including water-dwelling plants and animals and the algae and bacteria that constitute the first links in the food chain.

Outrageous Animal Adaptations Michael J. Rosen,2018-03-01 A fish that walks on land, a frog that makes its own sunscreen, and an insect that can become invisible? Whether to avoid predators, to stalk prey, or to withstand extreme temperatures, Earth's creatures have evolved some outrageous features and tricks to ensure survival. For example, did you know that the geoduck (nope, it's not a duck, it's a clam) can live as long as 160 years? And that the aye-aye, a nocturnal primate, uses echolocation and a long, spindly finger to find and dig up food? Or that in its deep-ocean habitat, the vampire squid uses bioluminescence to startle predators? These are among the many animals that show evolution and adaptation at work.

**The Deep!** Lindsey Leigh, 2023-06-27 Plunge beneath the waves to find an alien world of bizarre creatures who explain for themselves how they've adapted to life in the deep dark sea. Did you know that there are animals that are completely transparent? That some tube worms live for 1,000 years? That the Pigbutt Worm is also known as the "Flying Buttocks"? Or that there is a type of sea cucumber that is nicknamed "the headless chicken monster?" These are just some of the scientific facts, presented comics-style, that kids will pore over again and again. *The Deep!* is a rollicking survey of animals that live in the deepest part of the ocean created in an exciting graphic nonfiction format. The first-person commentary by the animals themselves cover a wealth of facts from the surface of the ocean to the darkest trenches. And the beautiful full-color illustrations bring them to life. From animal adaptations like bioluminescence and giant flashlight eyes to the habits and habitats of the Pram Bug and Dumbo Octopus, *The Deep!* will keep readers fully engaged with life at the bottom of the sea.

**How to Snog a Hagfish!** Jonathan Eysers, 2012-04-09 *How to Snog a Hagfish!* explores the most bizarre, the most disgusting and the most fascinating creatures that inhabit the oceans. When attacked, the hagfish (also known as the slime eel) ties itself in a knot that travels the length of its body, squeezing out mucus by the bucketful and making it impossible for a predator to keep hold. To eat, a starfish regurgitates its stomach, digests its food then swallows its stomach back down again. Pearlfish stick close to sea cucumbers, whose bowels they swim into when danger's near. And with shark attacks and jellyfish encounters, the oceans take on another level of repulsiveness when man dips his toes in the water. We know more about the

surface of the moon than we do the underwater world, but some of the species covered in this book are beyond even the imagination of science fiction writers. Entertaining yet informative, the idea of this book is not to wallow in grossness with the intention of putting people off their dinner, but to explore just how fascinating and 'alien' our own planet can be. Highly illustrated, and with stories and anecdotes that help bring a human perspective, this book demystifies the natural world beneath the waves, and shows how it's not quite so shocking when you understand why these creatures have developed the way they have.

**The Wasp That Brainwashed the Caterpillar** Matt Simon, 2016-10-25 “A bizarre collection of evolution tales . . . the weirder, the better.”

—Entertainment Weekly A fascinating exploration of the awe-inspiring, unsettling ingenuity of evolution from Wired writer Matt Simon, author of *Plight of the Living Dead* (coming soon from Penguin Books) On a barren seafloor, the pearlfish swims into the safety of a sea cucumber’s anus. To find a meal, the female bolas spider releases pheromones that mimic a female moth, luring male moths into her sticky lasso web. The *Glyptapanteles* wasp injects a caterpillar with her young, which feed on the victim, erupt out of it, then mind-control the poor (and somehow still living) schmuck into protecting them from predators. These are among the curious critters of *The Wasp That Brainwashed the Caterpillar*, a jaunt through evolution’s most unbelievable, most ingenious solutions to the problems of everyday life, from trying to get laid to finding food. Join Wired science writer Matt Simon as he introduces you to the creatures that have it figured out, the ones that joust with their mustaches or choke sharks to death with snot, all in a wild struggle to survive and, of course, find true love. Winner of the American Library Association’s Alex Award
