Genetics and Genomics of Brachypodium John P.

Vogel,2016-02-17 Grasses dominate many natural ecosystems and produce the bulk calories consumed by humans either directly in the form of grains or indirectly through forage/grain fed animals. In addition, grasses grown as biomass crops are poised to become a significant source of renewable energy. Despite their economic and environmental importance, research into the unique aspects of grass biology has been hampered by the lack of a truly tractable experimental model system. Over that past decade, the small, annual grass *Brachypodium distachyon* has emerged as a viable model system for the grasses. This book describes the development of extensive experimental resources (e.g. whole genome sequence, efficient transformation methods, insertional mutant

collections, large germplasm collections, recombinant inbred lines, resequenced genomes) that have led many laboratories around the world to adopt *B. distachyon* as a model system. The use of *B. distachyon* to address a wide range of biological topics (e.g. disease resistance, cell wall composition, abiotic stress tolerance, root growth and development, floral development, natural diversity) is also discussed.

*Recent Advances in Polyphenol Research, Volume 5*  
Kumi Yoshida, Véronique Cheynier, Stéphane Quideau, 2017-02-06  
Plant polyphenols are secondary metabolites that constitute one of the most common and widespread groups of natural products. They express a large and diverse panel of biological activities including beneficial effects on both plants and humans. Many polyphenols, from their structurally simplest representatives to their oligo/polymeric versions (also referred to as vegetable tannins), are notably known as phytoestrogens, plant pigments, potent antioxidants, and protein interacting agents. Sponsored by the scholarly society Groupe Polyphénols, this publication, which is the fifth volume in this highly regarded Recent Advances in Polyphenol Research series, is edited by Kumi Yoshida, Véronique Cheynier and Stéphane Quideau. They have once again, like their predecessors, put together an impressive collection of cutting-edge chapters written by expert scientists, internationally respected in their respective field of polyphenol sciences. This Volume 5 highlights some of the latest information and opinion on the following major research topics

about polyphenols: • Chemistry, physicochemistry & materials science • Biosynthesis, genetic & metabolic engineering • Plant & ecosystem, lignocellulosic biomass • Food, nutrition & health • Natural medicine & Kampo • Tannins & their functions Chemists, biochemists, plant scientists, pharmacognosists and pharmacologists, biologists, ecologists, food scientists and nutritionists will all find this book an invaluable resource. Libraries in all universities and research institutions where these disciplines are studied and taught should have copies on their bookshelves.

**Port Cities of Atlantic Iberia, c. 1500–1900**

Patrick O'Flanagan, 2016-04-08 Charting the evolution of the port cities of Atlantic Spain and Portugal over four centuries, this book examines the often dynamic interaction between the large privileged ports of Lisbon, Seville and Cadiz (the Metropoles) and the smaller ports of, among others, Oporto, Corunna and Santander (the Second Tier). The book particularly focuses on the implications of state-sponsored commercial policies for the main ports of Atlantic Iberia during the monopoly period extending from 1503 to c.1778, and briefly considers the implications of the suppression of monopoly for these centres over the remainder of the nineteenth century. Patrick O'Flanagan employs a wealth of source material to provide a multi-faceted survey of the growth of these port cities, moving deftly from local concerns to regional developments and global relationships. Beyond Spain and Portugal, the book also considers the important role played by the

Atlantic archipelagoes of the Canaries, the Azores and Madeira. This formidable study is an essential addition to the library of those studying Atlantic Iberia, historical geography, and transatlantic economic relationships of this period.

*Plant Cell Walls* Anja Geitmann, 2023-12-22 Plant cell walls have been relevant for human survival throughout evolution, from cell walls recognised as an essential ingredient in human and livestock nutrition, to their use in energy generation, construction, tool making, paper and clothing. This plant-generated material is at the centre of a myriad of human activities, and it represents the world's most abundant natural resource for fuel, fibre, food and fodder. *Plant Cell Walls: Research Milestones and Conceptual Insights* provides an overview of the key discoveries of hundreds of years of plant cell wall research. With chapter contributions from prominent scientists in the cell wall field, this book provides a comprehensive treatment of plant cell wall research, accompanied by a historical overview to illustrate how concepts have evolved, and how progress has been enabled by emerging technological advances. *Plant Cell Walls: Research Milestones and Conceptual Insights* elaborates on the translation of research to application in biotechnology and agriculture, and highlights its relevance for climate change mitigation and adaptation. It will be a key resource for plant cell biologists, biochemists and geneticists.

Proceedings of XIV Max Born Symposium, New Symmetries and Integrable Models Andrzej Frydryszak, Jerzy Lukierski, Z. Popowicz, 2000 The

Max Born Symposia started in 1991 and have been held once or twice a year in different places in Lower Silesia. The scientific topics of the Symposia are closely related with front-line research subjects in theoretical physics. This volume deals with new concepts of symmetries in the theory of fundamental interactions as well as integrable dynamical systems.

**The Travels of Marco Polo** Marco Polo, Sir Henry Yule, Henri Cordier, 1993-01-01 A vast treasury of invaluable observations on the peoples and geography of the Near East and Asia in the 13th century. Detailed descriptions of cities, customs, laws, crops, animals, politicals, more.

*Renin-Angiotensin Aldosterone System* Samy I. McFarlane, 2021-11-24 The Renin-Angiotensin Aldosterone System (RAAS) plays an important role not only in salt and water homeostasis but also in the cardiovascular system, the kidney, and the brain. While several volumes address different aspects of the RAAS function, this book provides cutting-edge information on the pathogenesis of various disorders related to RAAS overactivation. It also presents unique aspects of RAAS functioning that have not been sufficiently described in the literature. Topics covered include assessment of hypoaldosteronism in infancy, RAAS and cognitive decline, and the role of RAAS in the pathogenesis of COVID-19. Written by experts in the field in an easy-to-follow and illustrated format, this volume will benefit students and practitioners, as well as clinical and basic science investigators alike.

Inequality and Nutritional Transition in  
Economic History Francisco J. Medina-  
Albaladejo,José Miguel Martínez-Carrión,Salvador  
Calatayud,2023-04-13 Food consumption and  
nutrition are historically among the most  
characteristic features of inequality in living  
standards driven by socioeconomic, gender,  
generational and geographical reasons. Nutrition  
directly impacts mortality, life expectancy,  
height and illness and thus becomes a good  
indicator of living standards and their evolution  
over time. However, one issue that remains  
unresolved is how to measure past diet  
inequalities with the available sources. This book  
evaluates nutritional inequalities in Spain from  
the nineteenth century to the present day. It  
explores the socioeconomic, gender, generational  
and geographical variations in food consumption  
and nutrition in Spain during this period.  
Deriving historical data on nutrition and diet has  
always been difficult due to issues with available  
sources. This book adopts a multi-dimensional  
approach and two complementary methodologies  
capable of presenting a more comprehensive  
picture: the first analyses diets based on primary

sources, while the second examines the effect of nutritional inequalities on biological living standards, with special emphasis on average height. This combination allows for greater precision than previous studies on the impacts of food inequality. This book will be of significant interest to scholars from different academic branches, especially historians, economic historians and historians of science, economists, and also doctors, endocrinologists, paediatricians, anthropologists, nutritionists and expert in cooperation and development.
