Brett Green

The Gloster Meteor F.I & F.III Phil H. Listemann,2016-06-09 The Gloster Meteor was the first British jet fighter and the Allies' only operational jet aircraft during the Second World War. For the Meteor, the main issue was to find the right engines and the development of these took more time than initially planned and proved more complicated than originally thought but eventually the first Meteor F.Is were ready to enter service in the summer 1944. Their first action took place soon after in the hunt of the V-1 launched against England. Then the Meteor was deployed on the Continent in its F.III variant where it participated to the last stages of WW2 with the 2 TAF. This study covers the wartime era and ends in September 1945. This book is illustred with 30 photos (5 in colours) and five colour profiles.

GLOSTER METEOR RICHARD. FRANKS,2019

Gloster Meteor in British Service Martin Derry,Neil Robinson,2018-11-30 The Gloster F.9/40 was Britains first jet fighter and as the Meteor F.I became the first jet-powered aircraft of any description to enter service with the Allies in World War II. Several early Meteors were dispatched to Europe in the hope that 1945 might witness the first ever jet-on-jet combats between it and the much-vaunted German jets a contest which, in the event, was never to occur.Postwar, and the Meteor quickly became the backbone of the UKs day fighter defenses, progressing through successive Marks as it did so, until finally being replaced on the front line by later types during the mid-1950s. With their ever-adaptable airframe, two-seat Meteors became Britains primary night fighter too, serving for several years until replaced by the Gloster Javelin from the late 1950s onwards.With its operational career over, the Meteors adaptability and ruggedness was put to sterling use as an advanced trainer, the most obvious example of which was the T.7. As late as 1982, a handful of stalwarts were still soldiering on.Although space precludes a comprehensive history of such a prolific aircraft, it is hoped that both aviation enthusiasts and aircraft modelers may find some interesting examples in these pages, and sufficient inspiration to help them choose which color scheme to finish their latest Meteor model in.This latest addition to the FlightCraft range follows our well-established format in that it is split into three primary sections. The first covers the Meteor using numerous photographs, informative captions and tables. The second is a 16-page full-color illustration section featuring detailed profiles and 2-views of many of the color schemes and markings carried by British Meteors. The final section lists as many injection-moulded plastic model kits of the Meteor, in all the major scales, that the authors could obtain, plus a gallery of models made by some of the UKs best modelers.

Inside History of the Usaf Lightweight Fighters, 1900 to 1975 Herbert A. Hutchinson,2018-10-18 This book, in two volumes, attempts to explain the technology developments that evolved in the period from 1900 at Kitty Hawk through the ensuing seventy-five years leading to the development of the United States F-16 Multinational Weapon System in the mid-1970s. By 2017, 4,550 F-16s, all with the first all-electric, fly-by-wire flight control system have been manufactured for use by twenty-six countries. Awestricken birds undoubtedly ask themselves, How do humans do that? as an F-16 streaks by at over two hundred times the airspeed of the bird. This book strives to provide the how-and-why answer to that fascinating story.

Combat Meteors Alex Crawford,2021-10-15 As the title suggests, this book is devoted to the nations that used the Meteor in anger. After WWII Europe's air forces were keen to rebuild their air arms with jet aircraft. With little to choose from the Meteor was the prime candidate and hundreds were sold over the following years. Further afield in the Middle East, Meteors were sold to Egypt, Israel and Syria. In far off South America, Argentina, Brazil and Ecuador purchased the aircraft. On the other side of the World, South Africa and Australia operated them as well. Several of these nations used their Meteors operationally in open conflicts. From the RAF's struggle against the V-1 menace to the various hot spots around the dwindling Empire from Aden to Malaya. The Suez Crisis of 1956 would see Meteors from the RAF, Egypt, Israel and Syria all operating in the same conflict. During the Korean War (1950-53) the Royal Australian Air Force carried out thousands of ground attack missions and even engaged the MiG-15 in air to air combat. During a number of internal revolutions in Argentina in 1956, both sides operated the Meteor. Even France operated a handful of Meteor night fighters during their troubles in Algeria in 1957. Although it did not achieve a large amount of victories, the Meteor played an important part in the emerging air forces of a forever changing post-WWII World. Essential reading for aviation enthusiasts & scale aeromodellers.

Gloster Meteor Phil Butler,Tony Buttler,2006 This is the first ever in-depth history of one of the most successful British aircraft of all time, the British Gloster Meteor, whose strong popularity is evidenced by the recent release of several brand new model kits of the type. The Gloster Meteor first flew during World War II, and a few hardy survivors are still airworthy into the 21st century. It served with 16 overseas air forces as well as with the Royal Air Force. This book thoroughly covers the craft's design, development, and initial flight testing, as well as night fighter variants, construction information, service both in the United Kingdom and abroad, test beds and trials aircraft. The authors have had access to a wealth of material in the United Kingdom's Public Record Office which was not previously available to researchers on the aircraft. As a result, the book contains a great deal of previously unpublished information, many detailed photos in both color and black & white, and data tables and information on the serials carried by the aircraft.

The History of Air Intercept Radar & the British Nightfighter 1935–1959 Ian White,2007-05-30 This detailed history of Air Intercept radar traces the development of this vital military technology with the Royal Air Force during WWII. In the years after World War I, the United Kingdom was desperate to develop some form of protection from an enemy air strike. As early as 1923, the British Army had devised “sound mirrors” that could detect aircraft up to twelve miles away. This technical history traces the development of military radar technology from this early, experimental phase to the creation of the first air-to-air radar systems and their uses in battle. Historian Ian White sets this fascinating narrative within the larger political, military, economic and technological context of the era. Through World War II, Air Intercept radar was a vital asset in protecting RAF bomber forces as well as the country itself. But developing the technology required the tireless work of physicists and engineers in the Air Ministry Research Establishment, particularly members of the Establishment’s Airborne Group working under Dr. Edward Bowen. Their Airborne Interception radars, such as the AI Mk. IV, were used in Blenheim night-fighters during the winter Blitz and by Mosquito during the Baedeker Raids. This in-depth history covers the introduction of centimetric technology at the Telecommunications Research Establishment, the creation of centimetric AI, and their installation in the Beaufighter and later marks of the Mosquito. It describes the creation of the Radiation Laboratory at MIT and concludes with a section on further developments during the Cold War.

The Encyclopedia of Weapons of World War II Chris Bishop,2002 The encyclopedia of weapons of world war II is the most detailed and authoritative compendium of the weapons of mankind's greatest conflict ever published. It is a must for the military, enthusiast, and all those interested in World War II.

Meteor I vs V1 Flying Bomb Donald Nijboer,2012-10-23 British jet fighters initiated jet vs. jet warfare when they fought Hitler's Nazi German V-1 attacks on London in World War II. The V1 attack on London began on the night of 13/14 June 1944 from bases in Normandy. On 29 March 1945 the last one to fall on Britain was shot down by gunners in Suffolk. A total of 10,500 missiles were launched, of which 3957 were destroyed by the defences - 3531 reached England, 2420 falling in the London area. No fewer than 6184 people were killed and 17,981 seriously injured. Indeed, it could have been much worse, for by the end of the war the Germans had manufactured close to 32,000 flying bombs. The defences put forward to guard against the V1 were formidable - 23,000 men and women with their guns, radar and communications networks were installed on coastal sites. Squadrons of Britain's newest Spitfires, the F XIVs, and Hawker Tempest Vs were kept at home to battle the new menace. While the Spitfire F XIV and Tempest V had excellent low-level speed and were able to catch the V1, there was one aircraft that was much faster. Rushed into action on 22 July 1944 to help counter the V1 threat, Britain's Gloster Meteor I was the first jet

fighter to enter RAF service. At low and medium altitudes the Meteor was faster than its piston-engined contemporaries, which in turn made it perfectly suited to 'anti-Diver' V1 operations. On 4 August the Meteor scored its first V1 victory. Having just closed in on a flying bomb, Flg Off Dean of No 616 Sqn squeezed the trigger but his guns jammed. Using the Meteor's superior speed, he was able overtake the missile and, using his wing tip, he tipped the craft over and sent it crashing into the ground. This was the first time a jet-powered enemy aircraft had been destroyed by a jet fighter without a shot being fired! It was also the world's first jet versus jet encounter. As the only jet fighter squadron in Allied service in Europe, No 616 Sqn would go on to shoot down 13 V1s. A small number perhaps, but the interceptions between the V1 and Britain's Gloster Meteor were historic, and ushered in a new era of aerial combat.

History of Air-To-Air Refuelling Richard Tanner,2006-09-18 This is a unique account of the development and operational use of air-to-air flight refuelling since its early beginnings in the USA and the UK to the equipment that is in use today. The author draws upon his life-long career as senior design engineer with the successful British company In-Flight Refuelling who were responsible for the development of the hose and drogue technique now preferred by many of the world's air forces. The story begins in the early 1920s when the art of air refuelling was part of the Barn Storming record-breaking attempts that were popular in the USA. It continues into the late thirties when successful experiments were made. Amazingly, the Royal Air Force were not interested in pursuing this great technical advantage during World War II and it was the USAAF who requested the British invention to experiment with on their B-17s and B-24s. The Korean War saw extended use of operational air-to-air refuelling for the first time and now the 'tanker fleet' is an essential unit in major air-forces around the world.

Airbrushing and Finishing Scale Models Brett Green,2011-03-15 Brett Green details the prerequisites of airbrushing, including the different types of spray equipment and air sources available, offering advice on appropriate thinners, paint ratios and air pressures to ensure the most appropriate paint coverage across a range of different airbrushing applications. He then examines various airbrushing techniques across a wide range of models. Ten step-by-step, illustrated studies ranging from weathered military aircraft to pristine, high gloss motor vehicles, science fiction models, fantasy figures, groundwork and buildings will complete this in-depth guide to getting the best results on your models.

Flying Guns World War II Emmanuel Gustin,Anthony Williams,2003-06-08 This book describes the history of aircraft guns, their ammunition and their installations in aircraft. It commences with a technical history covering the development of guns, their ammunition, and related issues such as mountings and sights. This is followed by chapters on aircraft installations covering all nations and an evaluation of their use in combat. Appendices include comprehensive tables of the gun installations of World War II combat aircraft with details and illustrations of the guns used and specifications of their ammunition. There has never before been a comprehensive description of World War II aircraft gun armament. This book has been written with the aim of being the definitive work on this subject, dealing with armament of all participating air forces. Every technical aspect has been covered: gun design in the full range of sizes from small-caliber machine guns to heavy cannon; ammunition types and their use; fixed, flexible and turreted installations and gun sights. Comparative drawings and specifications of service weapons are provided, plus illustrations and data concerning their ammunition.

Gloster Meteor Richard J. Caruana,Richard A. Franks,2010-07 The Gloster Meteor was the first British jet fighter and the Allies' first operational jet. It was an effective jet fighter that served the RAF for decades. This text presents a full chronology and photo history of development and operational use.

The Men Who Flew the Hawker Hunter Martin W. Bowman,2021-06-09 Features a wealth of first-hand testimony drawn from pilots who flew the outstanding Hawker Hunter. If ever there was a real pilot's aeroplane it was the Hunter, an outstanding multi-purpose aircraft which excelled in the roles of interceptor fighter, ground attack, reconnaissance, research vehicle and two-seater trainer, not to mention its dramatic displays in formation aerobatic performances. The Hawker Hunter is one of the world's greatest aircraft. For decades pilots have enthused about it, extolling the virtues of its smooth, aerodynamic lines, 4 x 30mm cannon, Rolls-Royce Avon engine, and its outstandingly honest handling characteristics combined with a lively performance. Who can ever forget the glory days of the unforgettable aerobatic displays with the Black Knights, Black Arrows, and Blue Diamonds? This book vividly recalls operations in Europe with Fighter Command and 2nd TAF, and in Cyprus, the Middle East and the Far East, where Hunters in the ground-attack role operated against rebels in Aden and Malaysia respectively. The Hunter was undoubtedly a classic thoroughbred of its time from the stables of one of the finest fighter manufacturers in the world. Here, we read the details of its fascinating story, told from the perspective of the men who actually flew this outstanding aircraft through history.

Jet Prototypes of World War II Tony Buttler,2019-09-17 From the Heinkel He 178 to the Caproni Camini N.1, this is the authoritative illustrated guide to the revolutionary aircraft that led to start of the military jet age. While World War II raged, pioneering aircraft and engine designers were busy developing the world's first practical jet-powered research aircraft to test and prove the new technology. This book examines the aircraft that paved the way for

Germany's Me 262 and Britain's Meteor - the world's first jet fighters. Throughout the war, Germany, Italy, and Britain engaged in top-secret jet programs as they raced to develop the airpower of the future. Various experimental aircraft were trialed in order to achieve the goal of producing an effective engine and fighter that could harness the potential of the jet power. These included the German Heinkel He 178 research aircraft and Heinkel He 280 jet fighter prototype, the famed British E.28/39 research aircraft built by Gloster Aircraft as well as the stillborn E.5/42 fighter and E.1/44 Ace fighter prototype, and finally the remarkable Italian Caproni-Campini N.1/CC 2 research aircraft. Illustrated throughout with full-color artwork and rare photographs, this fascinating study examines the fore-runners to the military jet age.

The Aeroplane and Commercial Aviation News ,1953

RAF Meteor Jet Fighters in World War II, an Operational Log: An Operational Log Hugh Harkins,2013-07 Gloster Meteor - The advent of the gas-turbine engine pioneered in the late 1930's by Frank Whittle in Britain and Germany's Dr Hans von Ohain, and its subsequent development into operational jet-propulsion units led to the introduction of a new breed of combat aircraft in the last year of World War II. While Germany developed, built and flew many jet powered aircraft during the war, with several of these subsequently entering operational service, only a handful of allied jet designs actually flew before the war's end. Of these, only the Gloster Meteor twin-jet fighter actually entered service; No.616 Squadron becoming the first jet powered squadron in the world to be declared operational. In many respects, 616Squadron gained this accolade on paper only, as some German Units were operating jet powered aircraft in contested air defence zones prior to the Meteor being declared operational. Flying their first operational sorties against V-1 Flying Bombs on 27 July 1944, the Meteor was at the time being operated on an ad hoc basis, as a direct response to the V-1 attacks against southern Britain. The Squadron did not fully relinquish its Spitfire VII's until 13 August 1944, the date on which the last operational Spitfire mission was flown. The Meteor I was flown operational against the V-1 from late July 1944 until early September that year, following which it entered an intensive period of training through February 1945, by which time the Squadron had been transferred to the 2nd Tactical Air Force for operations on continental Europe supporting the allied armies advancing towards the German hinterland. A handful of aircraft began operating from Belgium from early February 1945, albeit in a non-operational role. The rest of the Squadron, which had been temporarily transferred back to RAF Fighter Command, commenced flying Anti-V-1 operations from early March 1945, until the 19th of that month, after which it reverted back to 2nd Tactical Air Force, flying out to Belgium on the 31st of the Month. The Squadron commenced operational missions as part of 2nd Tactical Air Force on 1 April, flying air defence and reconnaissance/ground attack sorties until the war in Europe ended, flying its last operational sorties on the 4 May 1945. By this time 504 Squadron was on the strength of Fighter Command, with several other squadrons commencing conversion to the Meteor III before World War II ended. Within weeks of the war's end the Meteor IV, which had flown on 15 August, captured with Word Speed Record with an average speed of 606 mph. This volume covers the development of British jet aircraft and the operational service of the aircraft from summer 1944, when the aircraft were employed against V-1 flying bombs until late 1945, including the aircrafts service with 2nd Tactical Air Force supporting the allied armies during the final advance into Germany.
