*How to be a Good Enough GP* Gerhard Wilke, Simon Freeman, 2018-04-19 The upheavals of the NHS reforms have caused a great deal of stress and uncertainty in primary care, and professional development and support for general practitioners needs to take account of this. This book offers a group supervision model which can be used to develop the core competencies needed for GPs to make the new primary care organisations work. The book analyses how primary care professionals have dealt with the various reforms of the past decade, and picks apart the paralysing culture of politeness, conflict avoidance and rivalry for power, to reveal how at the core of reform is the struggle for each GP to construct a new professional identity which integrates medicine, management and politics. It proposes ways GPs can benefit from these experiences to become equipped with the necessary competencies to be active members or dynamic leaders in the new primary care organisations. The doctor-patient relationship is no longer one-to-one, but located within a group matrix, in the same way that a GP is now required to work within a group framework. This book enables GPs to develop the essential group skills they now need, and on which the success of the healthcare reforms ultimately depends.

**Effective GP Commissioning - Essential Knowledge, Skills and Attitudes** Sunil Gupta, 2017-11-22 The proposed abolition of Primary Care Trusts and transfer of their commissioning functions to GP consortia have been greeted with intense excitement by some GPs, and with extreme trepidation by others. This book explains what commissioning is and how to do it, enabling clinicians to flourish as commissioners in the new NHS. Some topics that will be familiar to readers, such as long term conditions management, patient safety and the wider determinants of health, are explored here from a commissioning perspective. Others which may be less familiar, such as how to delegate, how to improve productivity, management theories and the content of financial accounts, are explored in detail. Additional skills needed by commissioning GPs - fostering innovation, assertiveness and emotional competence as well as negotiation, presentation and even media management skills - are outlined in a clear and straightforward fashion, while the necessary attitudes involved are described with reference to the Nolan Principles of Public Life. A straightforward yet comprehensive guide, *Effective GP Commissioning - Essential Knowledge, Skills and Attitudes* will be essential for GPs, prospective GPs, and those with an interest in effective commissioning. 'A useful resource for all GPs whatever their level of engagement and indeed for non-clinicians also. Sunil Gupta is clearly a GP and business magpie who has an incredible ability to gather, organise and present useful information. The content of this book is well-researched linking considerable volumes of information in a very useful, constructive manner.' - From the Foreword by Simon Gregory

*What Is a Doctor?* Dr Phil Whitaker, 2023-07-06 A WATERSTONES BEST BOOK OF 2023: POPULAR SCIENCE *What Is a Doctor?* is a vital contribution to the ongoing debate about how we maintain an NHS that is both fit for purpose and free. Using stories and case studies from across his thirty-year career as a GP, Dr Phil Whitaker offers insight into the medical movements, political interference and societal changes that have transformed the role of doctor over the past three decades. Much has altered for the better but, even when based on good intentions, an equal or greater amount has been damaging and threatens the sustainability of the NHS. In examining what it means to be a doctor today, this book also answers an accompanying question 'what is a patient?' - and how we can all take a more active role in our healthcare. And, looking forward, Dr Whitaker describes what might yet be done to restore the NHS and its capacity for properly patient-centred care.

**Numerical Algorithms for Number Theory: Using Pari/GP** Karim Belabas,Henri Cohen,2021-06-23 This book presents multiprecision algorithms used in number theory and elsewhere, such as extrapolation, numerical integration, numerical summation (including multiple zeta values and the Riemann-Siegel formula), evaluation and speed of convergence of continued fractions, Euler products and Euler sums, inverse Mellin transforms, and complex L L-functions. For each task, many algorithms are presented, such as Gaussian and doubly-exponential integration, Euler-MacLaurin, Abel-Plana, Lagrange, and Monien summation. Each algorithm is given in detail, together with a complete implementation in the free Pari/GP system. These implementations serve both to make even more precise the inner workings of the algorithms, and to gently introduce advanced features of the Pari/GP language. This book will be appreciated by anyone interested in number theory, specifically in practical implementations, computer experiments and numerical algorithms that can be scaled to produce thousands of digits of accuracy.
