Global Positioning System (GPS) Cristina Chaplain, 2011-04 The GPS provides positioning, navigation, and timing (PNT) data to users worldwide. The U.S. Air Force (AF) is in the process of modernizing the system. But, it is uncertain whether the AF could acquire new satellites in time to maintain GPS service without interruption. This report assesses: (1) the status of AF efforts to deliver new GPS satellites, the avail. of the GPS constellation, and the potential impacts on users if the constellation avail. diminishes below its committed level of performance; (2) efforts to acquire the GPS ground control and user equipment necessary to leverage GPS satellite capabilities; (3) the GPS interagency requirements process; and (4) coord. of GPS efforts with the internat. PNT community. Illus. This is a print on demand report.

Development and Evaluation of GPS Space Clocks for GPS III and Beyond, 2001 The current GPS has exceeded its globally averaged position and timing accuracy of 16 m (50 YO spherical error) and 100 ns (1 U) as stated in the 1990 GPS System Operation Requirements Document (SORD). The 1999 GPS Operational Requirements Documents (ORD) set a new goal for the GPS ZZZ and beyond. The 1999 ORD specifies the ranging accuracy 1.5 m threshold and 0.5 m objective. The 95% time transfer accuracy threshold and objective are 20 ns and 10 ns, respectively. This paper will evaluate how the current clocks and the clocks being developed can support the ORD threshold and objective. The paper will include the following topics: (1) atomic clocks on the GPS Block ZZ space vehicles, (2) estimated accuracy of the ZZF Rb clock by Perkin Elmer and digital Cs clock by Datum-Beverly and assessment of their performance against the ORD threshold range requirements, (3) description of the new space clocks being developed jointly by the GPS JPO, Aerospace, and NRL, and evaluation of their predicted performance to see if they can support the ORD objective of 0.5 m (rms), and (4) Prediction of the GPS signal-in-space accuracy, including all the space and control segments errors, using ZZF Rb and Cs clocks. The predictions are based on replacing the NZMA estimated GPS ZZ/IZA/ZZR clock data, contained in the actual tracking data of the GPS monitor stations and the NIMA tracking stations, by simulated IZF Rb and Cs clock data. A Kalman filter similar to that of the OCS then processes the resulting tracking data and the estimated results are compared with NIMA estimates treated as truth. Evaluations of the various options to see whether the ORD objective can be achieved based on the predicted signal-in-space accuracy are included.

Actions Needed to Address Ground System Development Problems United States Government Accountability Office, 2017-10-05 The satellite-based GPS provides positioning, navigation, and timing data to users worldwide. The Air Force is modernizing the satellite, ground control, and user equipment segments to enhance GPS performance. The Senate and House Armed Services Committee reports accompanying bills for the National Defense Authorization Act for Fiscal Year 2015 included provisions for GAO to review the status of OCX development and DOD's efforts to field M-code signal capability. This report addresses (1) the extent to which DOD is meeting cost, schedule, and performance requirements for OCX; (2) the progress DOD is making in delivering M-code capable MGUE by the end of fiscal year 2017; and (3) the challenges DOD faces in synchronizing the development of GPS III, OCX, and MGUE to deploy M-code. To conduct this work, GAO analyzed program documents such as acquisition strategies; reviewed oversight reporting; assessed constellation reliability metrics; and interviewed officials from DOD programs and contractors.

GPS Declassified Richard D. Easton, Project Muse, 2013 GPS Declassified examines the development of GPS from its secret, Cold War military roots to its emergence as a worldwide consumer industry. Drawing on previously unexplored documents, the authors examine how military rivalries influenced the creation of GPS and shaped public perceptions about its origin. Since the United States' first program to launch a satellite in the late 1950s, the nation has pursued dual paths into space—one military and secret, the other scientific and public. Among the many commercial spinoffs this approach has produced, GPS arguably boasts the greatest impact on our.

Hacking GPS Kathie Kingsley-Hughes, 2005-03-25 * This is the user manual that didn't come with any of the 30 million GPS receivers currently in use, showing readers how to modify, tweak, and hack their GPS to take it to new levels! * Crazy-cool modifications include exploiting secret keycodes, revealing hidden features, building power cords and cables, hacking the battery and antenna, protecting a GPS from impact and falls, making a screen protector, and solar-powering a GPS * Potential power users will take the function and performance of their GPS to a whole new level by hacking into the firmware and hacking into a PC connection with a GPS * Fear not! Any potentially dangerous mod (to the device) is clearly labeled, with precautions listed that should be taken * Game time! Readers can check out GPS games, check into hacking geocaching, and even use a GPS as a metal detector

Springer Handbook of Global Navigation Satellite Systems Peter Teunissen, Oliver Montenbruck, 2017-06-16 This Handbook presents a complete and rigorous overview of the fundamentals, methods and applications of the multidisciplinary field of Global Navigation Satellite Systems (GNSS), providing an exhaustive, one-stop reference work and a state-of-the-art description of GNSS as a key technology for science and society at large. All global and regional satellite navigation systems, both those currently in operation and those under development (GPS, GLONASS, Galileo, BeiDou, QZSS, IRNSS/NAVIC, SBAS), are examined in detail. The functional principles of receivers and antennas, as well as the advanced algorithms and models for GNSS parameter estimation, are rigorously discussed. The book covers the broad and diverse range of land, marine, air and space applications, from everyday GNSS to high-precision scientific applications and provides detailed descriptions of the most widely used GNSS format standards, covering receiver formats as well as IGS product and meta-data formats. The full coverage of the field of GNSS is presented in seven parts, from its fundamentals, through the treatment of global and regional navigation satellite systems, of receivers and antennas, and of algorithms and models, up to the broad and diverse range of applications in the areas of positioning and navigation, surveying, geodesy and geodynamics, and remote sensing and timing. Each chapter is written by international experts and amply illustrated with figures and photographs, making the book an invaluable resource for scientists, engineers, students and institutions alike.

Navy's Needs in Space for Providing Future Capabilities National Research Council, Division on Engineering and Physical Sciences, Naval Studies Board, Committee on the Navy's Needs in Space for Providing Future Capabilities, 2005-07-18 The United States must operate successfully in space to help assure its security and economic well being. The Department of the Navy is a major user of space capabilities, although those capabilities are now primarily provided by DOD, the Air Force, and NOAA. Following a DOD assessment of national space security management in 2001, the Navy commissioned a Panel to Review Space to assess Navy space policy and strategy. As an extension of that review, the NRC was requested by the Navy to examine its needs in space for providing future operational and technical capabilities. This report presents a discussion of the strategic framework of future space needs, the roles and responsibilities for meeting those needs, an assessment of Navy support to space mission areas, and a proposed vision for

fulfilling Naval forces space needs.

Hospitality Management and Digital Transformation Richard Busulwa,Nina Evans,Aaron Oh,Moon Kang,2020-12-28
Hospitality managers are at a critical inflection point. Digital technology advancements are ramping up guest expectations and introducing nontraditional competitors that are beginning to disrupt the whole industry. The hospitality managers whose organizations are to thrive need to get their organizations into a position where they can effectively leverage digital technologies to simultaneously deliver breakthroughs in efficiency, agility, and guest experience. Hospitality Management and Digital Transformation is a much-needed guidebook to digital disruption and transformation for current and prospective hospitality and leisure managers. The book: • Explains digital technology advancements, how they cause disruption, and the implications of this disruption for hospitality and leisure organizations. • Explains the digital business and digital transformation imperative for hospitality and leisure organizations. • Discusses the different digital capabilities required to effectively compete as a digital business. • Discusses the new and/or enhanced roles hospitality and leisure managers need to play in effecting the different digital capabilities, as well as the competencies required to play these roles. • Discusses how hospitality and leisure managers can keep up with digital technology advancements. • Unpacks more than 36 key digital technology advancements, discussing what they are, how they work, and how they can be implemented across the hospitality and leisure industry. This book will be useful for advanced undergraduate and postgraduate students studying strategic management, IT, information systems, or digital business-related courses as part of degrees in hospitality and leisure management; as well as practitioners studying for professional qualifications.
