- Maximal Nilpotent Subalgebras I: Nilradicals and Cartan Subalgebras in Associative Algebras. With 428 Exercises Sven Bodo Wirsing,2016-12 During the author's doctorate time at the Christian-Albrechts-Universitat to Kiel, Salvatore Siciliano gave a stimulating talk in the upper seminar algebra theory about Cartan subalgebras in Lie algebra associates to associative algebra. This talk was the incentive for the author to analyze maximal nilpotent substructures of the Lie algebra associated to associative algebras. In the present work Siciliano's theory about Cartan subalgebras is worked off and expanded to different special associative algebra classes. In addition, a second maximal nilpotent substructure is analyzed: the nilradical. Within this analysis the main focus is to describe these substructure with the associative structure of the underlying algebra. This is successfully realized in this work. Numerous examples (like group algebras and Solomon (Tits-) algebras) illustrate the results to the reader. Within the numerous exercises these results can be applied by the reader to get a deeper insight in this theory.
- **Introduction to Ke Huy Quan** Gilad James, PhD, Ke Huy Quan, also known as Jonathan Ke Quan, is a Vietnamese-American actor, stunt coordinator, and director. He was born on August 20, 1971, in Saigon, South Vietnam, but his family fled to the United States after the Fall of Saigon when he was only eight years

old. Growing up, Quan was known for being a wunderkind child actor, famous for his roles in Hollywood blockbusters like The Goonies and Indiana Jones and the Temple of the Doom. Despite his initial success in the entertainment industry, Quan decided to step away from acting after struggling with Hollywood's expectations and bias towards Asian actors. Instead, he went to school for cinematography and later worked as a stunt coordinator for major films like X-Men and The One. In recent years, Quan has directed his focus towards producing and directing his own independent films, like the zombie comedy film Spaced Invaders. Overall, Ke Huy Quan has had a long and diverse career in the entertainment industry and continues to contribute to film and television through his work behind the camera.

- STEM in the Technopolis: The Power of STEM Education in Regional Technology Policy Cliff Zintgraff,Sang C. Suh,Bruce Kellison,Paul E. Resta,2020-05-27 This book addresses how forward-thinking local communities are integrating pre-college STEM education, STEM pedagogy, industry clusters, college programs, and local, state and national policies to improve educational experiences, drive local development, gain competitive advantage for the communities, and lead students to rewarding careers. This book consists of three sections: foundational principles, city/regional case studies from across the globe, and state and national context. The

authors explore the hypothesis that when pre-college STEM education is integrated with city and regional development, regions can drive a virtuous cycle of education, economic development, and quality of life. Why should pre-college STEM education be included in regional technology policy? When local leaders talk about regional policy, they usually talk about how government, universities and industry should work together. This relationship is important, but what about the hundreds of millions of pre-college students, taught by tens of millions of teachers, supported by hundreds of thousands of volunteers, who deliver STEM education around the world? Leaders in the communities featured in STEM in the Technopolis have recognized the need to prepare students at an early age, and the power of real-world connections in the process. The authors advocate for this approach to be expanded. They describe how STEM pedagogy, priority industry clusters, cross-sector collaboration, and the local incarnations of global development challenges can be made to work together for the good of all citizens in local communities. This book will be of interest to government policymakers, school administrators, industry executives, and non-profit executives. The book will be useful as a reference to teachers, professors, industry professional volunteers, non-profit staff, and program leaders who are developing, running, or teaching in STEM programs or working to improve quality of life in their communities.

- Parallel Computing Roman Trobec,Mari n Vajter ic,Peter Zinterhof,2009-06-18 The use of parallel programming and architectures is essential for simulating and solving problems in modern computational practice. There has been rapid progress in microprocessor architecture, interconnection technology and software devel- ment, which are in?uencing directly the rapid growth of parallel and distributed computing. However, in order to make these bene?ts usable in practice, this dev- opment must be accompanied by progress in the design, analysis and application aspects of parallel algorithms. In particular, new approaches from

parallel num- ics are important for solving complex computational problems on parallel and/or distributed systems. The contributions to this book are focused on topics most concerned in the trends of today's parallel computing. These range from parallel algorithmics, progr- ming, tools, network computing to future parallel computing. Particular attention is paid to parallel numerics: linear algebra, differential equations, numerical integ- tion, number theory and their applications in computer simulations, which together form the kernel of the monograph. We expect that the book will be of interest to scientists working on parallel computing, doctoral students, teachers, engineers and mathematicians dealing with numerical applications and computer simulations of natural phenomena.
