The Last Chapter Jake Bussolini,2014-11-10 It was July 2, 1962, when Jake Bussolini first walked through the doors of Grumman Aircraft Engineering Corporation as their newest electrical engineer. As he was escorted to a plain gray desk that resembled the hundreds of other desks that cluttered the third floor, Bussolini never dreamed that over the next thirty-two years, he would not only help design and build the Lunar Module that delivered astronauts to the moon, but also climb the corporate ladder to become an integral part of an assignment that would lead Grumman in a startlingly different direction. As he leads others behind closed doors of both executive offices and the corporate board room during challenging times in the defense industry in the early 1990s, Bussolini discloses never-before-revealed details about how a friendly merger created to survive budget cuts slowly transformed into a hostile acquisition. While describing the tense events before, during, and after the acquisition, Bussolini divulges how activities initiated by an investment banker minutes before a final decision was to be made by the Board of Directors to approve the merger changed the course of the company's history, and the lives of its loyal employees forever. The Last Chapter shares the fascinating inside story of the 1994 acquisition of Grumman from a former company executive determined to document the final chapter in the history of a great corporation.

Building Moonships Joshua Stoff,2004-06-23 Chronicling the visual history of the design, construction and launch of the lunar module - one of the most historic machines in human history. In 1961, President John F. Kennedy announced his plans for landing a man on the moon by 1970 - despite the fact that the United States had a total of just 15 minutes of spaceflight experience up to that point. With that announcement, the space race had officially begun. In 1962, after a strenuous competition, the National Aeronautics and Space Administration (NASA) announced that the Grumman Aircraft Engineering Corporation of Bethpage, Long Island, had won the contract to build the lunar module - the spacecraft that would take Americans to the moon. This was the first and only vehicle designed to take humans from one world to another. Although much has been written about the first men to set foot on the moon, those first hesitant steps would not have been possible without the efforts of the designers and technicians assigned to Project Apollo. Building Moonships: The Grumman Lunar Module tells the story of the people who built and tested the lunar modules that were deployed on missions as well as the modules that never saw the light of day.

The Aircraft Designers Michael V. Ciminera,Northrop Grumman,2013 Tells the behind-the-scenes story of the designers and engineers who conceived and built Grumman aircraft from the founding of the company in 1929 until its 1994 acquisition by Northrop. This book also identifies key team members who contributed to the creation and development of each new design.

Grumman F11F Tiger Pilot's Flight Operating Instructions United States Navy,USN,2008-09-01 As the Blue Angels' aircraft in the late 1950s, Grumman's F11F-1 Tiger came to symbolize the speed and might of U.S. Navy airpower. The Tiger was originally conceived as an upgrade of the F9F Cougar. It eventually morphed into a new design, that incorporated the area rule to enable cruising speeds up to 1.1 Mach. The prototype flew in 1954, and carrier trials commenced in 1956. Eventually seven squadrons flew F11Fs. Hampered by maintenance issues affiliated with the J65 engine, and the fact that the Vought Crusader was clearly superior, the Tiger had a short service life. It was withdrawn from carrier duty after four years, in 1961. Only 199 were built. The remaining Tigers flew in a training capacity, and the Blue Angels continued to fly them for over a decade, 1957-1969. Originally printed by the U.S. Navy, this handbook provides a fascinating glimpse inside the cockpit of the Tiger. Originally classified 'restricted', the manual was declassified and is here reprinted in book form.

Grumman Mallard Fred W. Hotson,Matthew E. Rodina,2006 The Grumman Mallard amphibious aircraft was developed just after World War II as a small passenger aircraft for airline use but quickly found its niche in the expanding world of business aviation. What better than an aircraft that could fly busy executives to business meetings but also drop down on a remote lake for some salmon fishing? Before jets came along it was a favorite of celebrities such as Christian Dior, Gar Wood and Lord Beaverbrook. In more recent years the Mallard has come to be regarded as one of the most beautiful seaplanes ever produced and it is popular with wealthy collectors, who restore them and use them to tour the world. This book, handsomely illustrated with photos of Mallards past and present, as well as unique fold-out cutaway drawings of the original and the turbine version, is the first book on this classic aircraft and a labor of love on the part of the author.
