*California Warplanes* Harold Skaarup,2012 This aviation handbook is designed to be used as a quick reference to the classic military heritage aircraft that have been restored and preserved in the state of California. The aircraft include those flown by members of the US Air Force, the US Navy, the US Army, the US Marine Corps, the US Coast Guard, the Air and Army National Guard units, and by various NATO and allied nations as well as a number of aircraft previously operated by opposition forces in peace and war. The interested reader will find useful information and a few technical details on most of the military aircraft that have been in service with active flying squadrons both at home and overseas. 150 selected photographs have been included to illustrate a few of the major examples in addition to the serial numbers assigned to American military aircraft. For those who would like to actually see the aircraft concerned, aviation museum locations, addresses and contact phone numbers, websites and email addresses have been included, along with a list of aircraft held in each museum's current inventory or that on display as gate guardians throughout the state of California. The aircraft presented in this edition are listed alphabetically by manufacturer, number and type. Although many of California's heritage warplanes have completely

disappeared, a few have been carefully collected, restored and preserved, and a good number have been restored to flying condition. This guide-book should help you to find and view California's Warplane survivors.

**California Warbird Survivors 2002** Harold A. Skaarup, 2002-07-18 During the twentieth century, civil and military aviation has played a prominent role in the history and development of California. Commercial operators have exploited the advantages offered by aircraft to overcome its unique challenges of geography and climate. By virtue of California's comparative size and strategic importance on the West Coast of the continental USA, a wide variety of military aircraft have been based there through the years. The list of military aircraft types that made up the tapestry of California aviation is as extensive as the list of legendary figures who have contributed to its amazing history. While most of the military aircraft types no longer grace the airspace over California, many can be viewed in their former splendor as they stand as gate guards or museum exhibits. This booklet provides a comprehensive guide to where these restored aircraft can be found. Complementing the details concerning aircraft specifications and roles, the author has included many facts. Finally, the descriptions of the recovery, restoration and preservation efforts stand as a tribute to the many volunteers who have devoted time, energy and financial support to ensure this rich heritage is preserved.

**Operation Iraqi Freedom** Walter J. Boyne, 2003-11-15 No war has ever had the intensive media coverage of the 2003 war in Iraq, and none has ever had such monumental second-guessing. Months before the war began, domestic and international pundits painted a gloomy picture of a new Vietnam or of a nuclear Armageddon that would see Israel reduced to ruins. The war started with a brilliant series of pre-emptive bangs that shattered Iraqi leadership and seized the most valuable areas of Iraq. How did the US military machine, assumed to have insufficient air power, too few troops, and little momentum take a country the size of California within three weeks? In the 1991 victory in the Gulf War, the United States led a much larger coalition force into a heavy air campaign followed by a lightening quick ground campaign. In the years that followed, the United States military experienced a continuing series of reductions in the national defense budget. What was left unrecorded was the incredible degree of competence with which the US military leadership managed the reduction in resources, balancing force structures against personnel requirements against procurement needs and logistic realities. Any one considering the great military victory achieved in Iraq must ask the following questions: Who was bright enough to plan to have the weapons systems in the right place at the right time? Who orchestrated this vast complex array of sophisticated military machinery-ships, submarines, missiles, armor, and soldiers-all needing fuel, ammunition and water? The answer is the much-maligned civil and military leaders of the American defense establishment, working in concert with the most advanced defense-based corporations in the world. While there were those anxious to parade the iniquities of a two-billion dollar bomber, most often failed to appreciate the genius required to conceive of, much less create a system which can use a

satellite to send signals to a B-1B to program a precision guided missile to take out a Soviet T-72 tank parked in a mosque-without damaging the mosque! Admittedly, there were lapses in the Iraqi war, such as the looting of museums by members of the Ba'ath party just a day after many had declared Baghdad liberated and the raids on hospitals, another problem that could have easily been remedied by a show of U.S. presence and force. And there were technological complications as well, including the aching misfortune of death by friendly fire. The author deals with these shortcomings in a straightforward manner. Operation Iraqi Freedom: What Went Right and Why; What Went Wrong and Why gives intimate insight into the way in which the armed services, particularly the United States Air Force, managed to overcome genuine budgetary, political, and military difficulties to create the finest military force in the world, one that operated with the most extreme care to avoid collateral damage and to prevent loss of life. *Long Island Aircraft Manufacturers* Joshua Stoff,2010-08-16 Significant aircraft manufacturing began on

Long Island in the early 20th century and boomed during the war years. Long Islanders helped transform aviation from a dangerous sport to a viable means of transportation, while also producing a large portion of the nation's aerial arsenal in times of war. From the first frail biplanes to the warbirds of World War II and the sleek fighters of the jet age, aviation companies on Long Island helped make aviation the integral part of our world that it is today. During the 20th century, over 70 firms came to build aircraft on Long Island. Some of these firms lasted for decades and became famed builders of historic aircraft, such as Grumman, Republic, Curtiss, Fairchild, and Sikorsky.

*On Geopolitics: Classical and Nuclear* Ciro E. Zoppo, Charles Zorgbibe, 2012-12-06 At the outset of the 1980's NATO decided to extend the scientific program of its Scientific Affairs Division to include the social sciences. Strategic and international studies were included within this domain with the express purpose of facilitating communication among experts and research centers in member countries as well as in the Organization itself on these important topics. This study is the result of the first Advanced Research

Workshop on a subject of international relations. It focuses on the historical and theoretical aspects of geopolitics because they must necessarily precede studies of policy application. This was the intent of the organizers of the Workshop as well as of the sponsoring institution. The choice of the topic was ours. Conclusions were drawn according to our own judgments--being totally unfettered by any guidance from NATO officials. Consequently, the views and conclusions presented in this work do not represent any NATO policy; other than the encouragement of research in political freedom, by free scholars, to strengthen freedom everywhere. We speak for all participants in the Workshop when we voice our appreciation for the financial and organizational support extended us by the Scientific Affairs Division and the Information Directorate.

**Special Duty** Richard J. Samuels, 2019-10-15 The prewar history of the Japanese intelligence community demonstrates how having power over much, but insight into little can have devastating consequences. Its postwar history—one of limited Japanese power despite growing insight—has also been problematic for national security. In *Special Duty* Richard J. Samuels dissects the fascinating history of the intelligence community in Japan. Looking at the impact of shifts in the strategic environment, technological change, and past failures, he probes the reasons why Japan has endured such a roller-coaster ride when it comes to intelligence gathering and analysis, and concludes that the ups and downs of the past century—combined with growing uncertainties in the regional security environment—have convinced Japanese leaders of the critical importance of striking balance between power and insight. Using examples of excessive hubris and debilitating bureaucratic competition before the Asia-Pacific War, the unavoidable

dependence on US assets and popular sensitivity to security issues after World War II, and the tardy adoption of image-processing and cyber technologies, Samuels' bold book highlights the century-long history of Japan's struggles to develop a fully functioning and effective intelligence capability, and makes clear that Japanese leaders have begun to reinvent their nation's intelligence community.

**Into the Blue: American Writing on Aviation and Spaceflight** Joseph J. Corn, 2011-10-13 Into the Blue revisits the remarkable trajectory of Americans in air and space, gathering sixty of the best eyewitness and participant narratives from Benjamin Franklin's letters on the first hot air balloons to Chris Jones's account of being marooned on the International Space Station. Here are those who made flight happen: Orville and Wilbur Wright, self-taught pioneers whose homespun invention stunned the world; World War I ace Eddie Rickenbacker, whose memoirs (excerpted here for the first time in unedited form) describe the frightening novelties of aerial combat; and daredevils like Texas barnstormer Slat Rogers and test pilot Jimmy Collins. Ernest Hemingway offers a vivid dispatch on a 1922 flight over France, and Gertrude Stein muses on the look of America from the air; Charles A. Lindbergh and Amelia Earhart narrate their groundbreaking transatlantic flights; Ralph Ellison reflects on the experience of African American airmen at Tuskegee; William F. Buckley Jr. recounts his mishaps as an amateur pilot; Wernher von Braun envisions a space station of the future, while astronauts John Glenn, Michael Collins and Buzz Aldrin provide firsthand recollections of the conquest of space. Here too, among many other subjects, are scenes and episodes in the development of commercial aviation, from the hiring of the first stewardesses and the

high stress lives of air traffic controllers to the new ubiquity of what Walter Kirn calls Airworld. A thirty-two-page insert offers photographs, some previously unpublished, of the writers and their crafts.
