The Centurion Tank Pat Ware, Brian Delf, 2013-03-20 Few tank designs have been as effective, versatile and long-lived as that of the British Centurion. Conceived during the Second World War as the answer to the superior German Tiger and Panther tanks and to the lethal 88mm gun, this 52-ton main battle tank incorporated the lessons British designers had learned about armored fighting vehicles during the conflict, and it was free of the major faults that had impaired the other British tank designs of the time. The Centurion was so successful that it served in the British Army and in numerous other armies across the world from 1945 until the 1990s. Pat Ware's highly

illustrated history of this remarkable tank covers its design and development, its technical specifications and the many variants that were produced. He tells the story from the design brief of 1943, through testing and trials to the tank's entry into service. In addition, he traces the course of the Centurion's subsequent career, as it was up-dated, up-gunned and adapted to operate in varied conditions and conflicts all over the world including Korea, the Indo-Pakistan wars, Vietnam and the Arab-Israeli wars. His expert account of this remarkable fighting vehicle is accompanied by a series of color plates showing the main variants of the design and the common ancillary equipment and unit markings. His book is an essential work of reference for enthusiasts.

**TM 9-718a 90-MM Gun Tank M47 Patton Technical Manual** Department of the Army, 2013-06 The 90mm gun tank M47 Patton is an American medium tank and the second tank to be named after General George S. Patton, commander of the U.S. Third Army during World War II. It was a further development of the M46

Patton tank. The M47 was the U.S. Army's and Marine Corps' primary tank, intended to replace the M46 Patton and M4 Sherman medium tanks. The M47 was the only Patton series tank that never saw combat while in United States service. Many different M47 Patton models remain in service internationally. The M47 Patton was developed by the Detroit Arsenal, and entered production in 1951. Its main gun was the M36 (T119E1) 90-mm gun with an M12 optical rangefinder fitted. The secondary armament consisted of two .30cal Browning machine guns, one in the bow of the hull and one coaxial machine gun in the turret, and a .50cal Browning M2 on a pintle mount on the turret roof. The M47 was the last American designed tank to include a bow machine gun. Created in 1952, this technical manual reveals a great deal about the 90-mm gun tank M47, and its design and capabilities. Intended as a manual for those responsible for operation and maintenance, it details many aspects of the M47's engine, turret, and cooling system. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.

Chemical and Biological Defence Establishment at Porton Down. Collectively these have carried out a very high proportion of all the scientific research conducted in Britain since the war.
