California Condor Amanda Lanser,2016-12-15 California condors once soared the US Pacific Coast, but by 1982, their dwindling numbers forced conservationists to bring the few remaining birds into captivity. California Condor follows the condor's journey from its brush with extinction to today's efforts to eliminate lead poisoning and other threats that continue to endanger the species. Easy-to-read text, vivid images, and helpful back matter give readers a clear look at this subject. Features include a table of contents, infographics, a glossary, additional resources, and an index. Aligned to Common Core Standards and correlated to state standards. Core Library is an imprint of Abdo Publishing, a division of ABDO.

California Condors Shirlaine Baldwin,Bob Baldwin,2016-02-24 The California Condor (*Gymnogyps californianus*) is thought to date from around 40,000 years ago and is the largest North American land bird. In 1982 there were just 22 remaining in the world, and in 1987 the last California Condor was removed from the wild to preserve the species. The birds were reintroduced to the wild in 1997. Pinnacles National Park in Central California, approximately 80 miles southeast of San Jose, is the only National Park Service unit serving as a release site for California Condors hatched in captivity. Still critically

endangered, the Park population today stands at around 70 Condors. Visiting Pinnacles National Park, authors Shirleine and Bob Baldwin were treated to a rare and magnificent display by several birds which they were able to capture in the glorious photographs featured in this book. Few people ever get to see the California Condor, and the incredible photographs in this book include condors in flight, at rest, dancing and generally showing off for the camera. You can preview the book at www.elmgrovepublishing.com

California Condors Laura Hamilton Waxman,2016-01-01 Readers will compare key traits of California condors?their appearance, behavior, habitat, and life cycle?to traits of other birds. --Amazon.com.

California Condors Meish Goldish,2009-01-01 True tales of wildlife survival show how the heroic efforts of people who stepped in when all seemed lost have brought these endangered animals back from the brink of extinction.

California Condor Susan H. Gray,2009-01-01 The California condor is the largest bird in North America. Scientists have found condor fossils that are nearly 100,000 years old. As more people settled in the American west, however, condors lost much of their habitat to human development. By 1982, fewer than 25 California condors lived in the wild. Read this book to find out more about California condors, how they came close to extinction, and what people are doing do help make sure condors stay on the road to recovery.

California Condors Jared Verner,1978

Introduction to the California Condor Noel F. R. Snyder,Helen A.

Snyder,2005-03-14 This is an amazingly compact, up-to-date history of the politics and biological research of the California Condor. It will be invaluable for biology students who want to review a case study of an endangered species and for environmental planners considering the highly political nature of rare-species conservation.—Allen Fish, Director, Golden Gate Raptor Observatory As one of the most visible, dramatic, and controversial examples of intensive conservation management in modern times, the California Condor makes a good story. The Snyders' work is exemplary. This is a solid introduction to the subject and an excellent contribution to the press's natural history series.—Walter Koenig, Hastings Natural History Reservation, University of California

The California Condor, "The Big Ugly" Mary Jo Nickum,2021-01-07 The California condor, *Gymnogyps californianus*, is one of the largest flying birds in the world. When it soars, the wings spread more than nine feet from tip to tip. Condors may weigh more than 20 pounds. The male Andean condor of South America is even larger than our California condor. Both are endangered species. The spectacular but endangered California condor is the largest bird in North America. These superb gliders travel widely to feed on carcasses of deer, pigs, cattle, sea lions, whales, and other animals. Pairs nest in caves high on cliff faces. The population fell to just 22 birds in the 1980s, but there are now some 230 free-flying birds in California, Arizona, and Baja California with another 160 in captivity. Lead poisoning remains a severe threat to their long-term prospects. Read their story [here](#).

California Condors Rachel Grack,2024-01-01 California condors are the largest birds in North America. But these birds are critically endangered. In this leveled text, readers will learn about the threats to these animals as well as some of the efforts underway to save them. Special features include a range map, a breakdown of the importance of California condors, and a profile of their status and lifespan. Vibrant photos bring these giant birds to life in this engaging title!

The California Condor, 1966-76 Sanford R. Wilbur,1978

California Condors Rebecca Sabelko,2019-08-01 A California condor leaps from a high cliff, on the lookout for carrion. Back from the brink of extinction, these huge scavengers soar across the desert for hours. They can go for two weeks without eating! Readers will learn all about the rare condor in this intriguing title.

California Condors Mary R. Dunn,2015 Describes the characteristics, habitat, behavior, life cycle, and threats to California condors.--
