

Gyroplane

Martin Hollmann

From Autogiro to Gyroplane Bruce H.

Charnov, 2003-07-30 Predating the invention of the helicopter by two decades, the Autogiro was the world's first rotary-wing aircraft. The helicopter had the advantageous ability to rise straight up, while the Autogiro/gyroplane could only taxi. Yet the gyroplane was safer and more stable; both aircraft should have had value in market. Why did the helicopter survive and prosper, while the Autogiro became a nearly forgotten historical footnote? Why didn't the Autogiro catch on, and why is it being revived today? This is the first book to tell the fascinating 80-year history of today's gyroplane and its antecedent, the Autogiro. Charnov explains that the near-eclipse of the Autogiro was caused by a potent combination of bad luck, the impact of the Great Depression and World War II, and egregious business decisions. Only by understanding the amazing manner in which this aviation technology has persisted and evolved can one fully understand the basis for its future. In contrast to the fate of the Autogiro, the gyroplane's unfolding story is characterized by successful business models, effective decision making, and the emergence of cutting-edge technology. The survival of the gyroplane may be a paradigm for the persistence of earlier, less complex technologies, and its future relies on grasping its colorful history.

Weltflug Andreas G. Stuetz,2013-11 Weltflug -
The Gyroplane Dream: A true life story that lifts
you into flight - literally. Take off to a
fantastic world tour and fly through the most
beautiful landscapes in Europe, Africa, Australia,
New Zealand, the USA & South America. Imagine
being a part of an 18-month airborne adventure
that spans 5 continents. Feel the wind brushing
against your face and exciting your skin. See
yourself looking down from low altitudes, soaking
in the awesome beauty of some of the planet's most
fascinating destinations. And now, imagine that
you are sharing this incredible adventure with
your spouse - all from a 2-seated lightweight
gyroplane! Impossible? That's just what everyone
used to think. But Andreas and Melanie Stuetz were
on a mission to live out their childhood dreams -
and nothing was going to stop them... What is a
gyroplane? First flown successfully in 1923,
gyroplanes are types of rotorcrafts. Rotorcrafts
utilize self-turning rotors to develop lift and
motor-powered propellers to generate thrust.
Breathtaking and Courageous! With sheer
wonderment, you'll glide into the atmosphere above
historical Europe. In South America, you float
above the stunning waterfalls of Iguacu. Across
Africa, you experience a bird's-eye view of the
captivating expanses of the Kalahari. Far away,

you will drift slowly over the sights of New Zealand while further developing your sense of amazement about the world we live in. About the Adventurers: Andreas G. Stuetz In the seventies, as a young boy in West Germany, Andreas dreamed of being an adventurer, an inventor and a successful entrepreneur. He always wanted to fly and was fascinated with the WDR cult TV puppet series Robbi, Tobbi and Fliewatuut. The Fliewatuut was a vehicle capable of flight, floatation and terrestrial travel. He was stricken then with need to fly. Life progressed. In 2000, he was awarded with the highly prestigious StartUp price by Angela Merkel. Andreas matured into the prosperous inventor and entrepreneur that he had envisioned - but something was missing. He still wanted to experience daring adventures in a Fliewatuut. Melanie Stuetz Like Andreas, Melanie dreamed as a child in East Germany, the GDR, of limitless travel, ideally as a cosmonaut in space. On October 1989 she and her father crossed as refugees the green border to Prague (CZ) to enter the first refugee trains, which lead to the Western Part of Germany, where her Mom already waited after her last visit without return. Twenty years later Melanie is closer than ever to her childhood dream. She was the first woman to pass the sport pilot licensing test for Xenon gyroplanes. After marrying, her and Andreas continued to plan for and train for the realization of their flight dreams. One day, while watching the James Bond movie, You Only Live Twice, they witnessed Sean Connery, as 007, performing a daring getaway scene. He soared away

to safety, and to freedom, on a mini-helicopter - on a gyroplane! Let the adventure begin! Andreas and Melanie became licensed pilots and shortly thereafter launched their unified childhood dream of an unlimited world tour by the Fliewatuut-like gyroplane. It was a truly pioneering effort! Their astonishing adventure took eighteen months to complete and traversed five separate continents. This amazing book and accompanying video collection are the thrilling results of more than 3 years of work overall. Charity Terre des Hommes is an international charity dedicated to helping disadvantaged children. Melanie and Andreas share a deep sense of gratitude for the fortune that they have enjoyed. For that reason, a percentage of all proceeds from the sales of the book and DVD's is donated to Terre des Hommes. But money alone is not enough. It is a dream that drives the life of a person. And that is the reason why Andy & Mel also asked the children about their dreams. It is important that children do have dreams to find their way in life. To make childhood dreams come true

controls, systems, performance, flight maneuvers, emergencies, and aeronautical decision making is included. Contents: Chapter 1—Introduction to the Helicopter; Chapter 2—General Aerodynamics; Chapter 3—Aerodynamics of Flight; Chapter 4—Helicopter Flight Controls; Chapter 5—Helicopter Systems; Chapter 6—Rotorcraft Flight Manual (Helicopter); Chapter 7—Weight and Balance; Chapter 8 Performance; Chapter 9—Basic Flight Maneuvers; Chapter 10—Advanced Maneuvers; Chapter 11—Helicopter Emergencies; Chapter 12—Attitude Instrument Flying; Chapter 13—Night Operations; Chapter 14—Aeronautical Decision Making; Chapter 15—Introduction to the Gyroplane; Chapter 16—Aerodynamics of the Gyroplane; Chapter 17—Gyroplane Flight Controls; Chapter 18—Gyroplane Systems; Chapter 19—Rotorcraft Flight Manual (Gyroplane); Chapter 20—Flight Operations; Chapter 21—Gyroplane Emergencies; Chapter 22—Gyroplane Aeronautical Decision Making; Glossary and index.

Spinning on the Wind: A Gyronaut's Tale Shirley Jennings, 2019-02-15 The arrival of the 1960s saw the dawn of the homebuilt gyroplane. A new genre of aviation like nothing seen before: a wing that lives and breathes, driven purely by the wind. Deceptive in its simplicity, addictive in its freedom and deadly to the unwary. It's a powerful enchantment. In domestic garages and garden sheds, ordinary people built tiny rotorcraft - then taught themselves to fly by reading the instructions. Two pioneers were smitten by this exciting new form of flight and set out on an identical path, weaving a circle of coincidence that spanned five decades and encompassed a

nation. It's a fine line between rapture and tragedy. One flight is all it takes...

An Introduction to Ultralight Gyroplanes Dave Organ,2002 Gyroplanes are mechanically simple in construction and stable in the air - hence their growing popularity. They are far more versatile than any fixed wing aircraft, are impossible to stall and yet are capable of speeds in excess of 100 mph. They can - in certain wind conditions - hover or even fly backwards; can descend vertically under complete control and can make safe, controlled landings, in the event of engine failure.--Back cover.

The Aerodynamics of Gyroplanes Civil Aviation

Authority,2010 This document reports on the development and assessment of a new type of offshore approach procedure called SOAP (SBAS Offshore Approach Procedure). Offshore helicopter operations in support of the oil and gas industry have for many years made use of an Airborne Radar Approach (ARA) procedure for low-visibility offshore approaches. The ARA relies on the aircraft's weather radar for guidance and as a

means of detecting obstacles in the approach and overshoot paths. Although this situation has existed for a number of years and the safety record has generally been reasonable, the weather radar is neither designed nor certificated for the task. Furthermore, a safety assessment of the ARA (CAA paper 2009/06, ISBN 9780117922747) identified a number of weaknesses that need to be addressed. The European Geostationary Navigation Overlay System (EGNOS) is the European Satellite Based Augmentation System (SBAS) that will become operational in 2010. When combined with GPS, it will offer users a very high accuracy and integrity navigation capability, and has potential to provide a practical differential GPS offshore approach guidance system and address the limitations of the existing ARA procedures. A new SBAS Offshore Approach Procedure (SOAP) has been developed, and this document contains the results of the following work to investigate its feasibility: simulations to assess the flyability of the procedure; a safety assessment; data collection (via flight trials) and analysis; EGNOS availability assessment.
