The Theory of $H(b)$ Spaces: Emmanuel Fricain, Javad Mashregi, 2016-05-26 An $H(b)$ space is defined as a collection of analytic functions which are in the image of an operator. The theory of $H(b)$ spaces bridges two classical subjects: complex analysis and operator theory, which makes it both appealing and demanding. The first volume of this comprehensive treatment is devoted to the preliminary subjects required to understand the foundation of $H(b)$ spaces, such as Hardy spaces, Fourier analysis, integral representation theorems, Carleson measures, Toeplitz and Hankel operators, various types of shift operators, and Clark measures. The second volume focuses on the central theory. Both books are accessible to graduate students as well as researchers: each volume contains numerous exercises and hints, and figures are included throughout to illustrate the theory. Together, these two volumes provide everything the reader needs to understand and appreciate this beautiful branch of mathematics.

Isomorphisms Between H_1 Spaces Paul F.X. Müller, 2006-03-30 This book gives a thorough and self contained presentation of H_1 , its known isomorphic invariants and a complete classification of H_1 on spaces of homogeneous type. The necessary background is developed from scratch. This includes a detailed discussion of the Haar system, together with the operators that can be built from it. Complete proofs are given for the classical martingale inequalities, and for large deviation inequalities. Complex interpolation is treated. Throughout, special attention is given to the combinatorial methods developed in the field. An entire chapter is devoted to study the combinatorics of coloured dyadic Intervals.

The Hardy Space H_1 with Non-doubling Measures and Their Applications Dachun Yang, Dongyong Yang, Guoen Hu, 2014-01-04 The present book offers an essential but accessible introduction to the discoveries first made in the 1990s that the doubling condition is superfluous for most results for function spaces and the boundedness of operators. It shows the methods behind these discoveries, their consequences and some of their applications. It also provides detailed and comprehensive arguments, many typical and easy-to-follow examples, and interesting unsolved problems. The theory of the Hardy space is a fundamental tool for Fourier analysis, with applications for and connections to complex analysis, partial differential equations, functional analysis and geometrical analysis. It also extends to settings where the doubling condition of the underlying measures may fail.

Model Rules of Professional Conduct American Bar Association. House of Delegates, Center for Professional Responsibility (American Bar Association), 2007 The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary

actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

Detlefsen, illustrated by Madeline Valentine, shows young readers how to conquer the pool. From what to wear (a bathing suit, of course!) to what to expect (no, your teacher will not be a mermaid), *1, 2, 3, Jump!* covers the what-if's and how-to's of getting in the pool for the first time. There's a lot to worry about (can I be sucked in the filter?) and even more to be excited about (when can I wear flippers?), and our narrator has thought of everything. By the time she's ready, you to will want to jump in!
