Hand Cannon to Automatic Herschel C. Logan,1944

Hand Cannons Duncan Long,1995 Hand cannons are the biggest, loudest, most powerful handguns in the shooting world, firing cartridges from the famous .44 Magnum up to the mammoth .50 BMG. Duncan Long evaluates these massive pistols and reveals how to tame their recoil and muzzle blast and improve their accuracy.

Handgun Bullet Stopping Power George B. Bredsten,2008 For the law enforcement officer and the civilian who may be in a situation that requires the use of a handgun to stop a lethal threat action, it is important that the person differentiates between the crass, glib and self-serving advertisements of ammunition vendors and the reality of how, what and why effective stopping power occurs. Factors to consider are the physiological response, the psychological response, the time frame parameter and bullet efficacy. Of these four factors, only bullet efficacy can be somewhat controlled by the person, this only by understanding how and to what extent the bullet contributes to the degree of stopping

power obtained. A number of concepts / formulae have been included so as to permit the reader to consider their merits and whether or not they are consistent with the reality of biology, physics and other relevant sciences. Finally the material in this book is intended to permit those persons to instruct, teach or make decisions regarding the selection of a service handgun/cartridge combination that will help to provide the means to prevail in a lethal threat confrontation. About the Author: Mr. Bredsten retired from the Federal Law Enforcement Training Center/Firearms Division (FLETC/FAD). With FLETC/FAD he performed duties as a firearms instructor and he also taught ballistics to the FLETC/FAD staff and to students in the Law Enforcement Rifle Training Program and in the Precision Rifle (Sniper) and Observer Program. Subjects covered included the ballistic coefficient, barrel time, the coefficient of reduction (form), Greenhill formula (rate of rifling twist), firearm recoil, bullet time-of-flight, bullet drop, bullet midrange, wind deflection, bullet penetration potential and bullet terminal (wounding) efficacy. Since retiring he has provided ballistics consultation service for the FLETC/FAD, the Transportation Security Agency, the Orange County (Florida) Sheriff's Department and Exxon Mobil

Corporation. Mr. Bredsten attended and completed various classes/courses relating to firearms (e.g., H&K MP5, Steyr Aug, Uzi, Tactical Speed Shooting and advanced shotgun) and ballistics (e.g., the first and second International Wound Ballistics Conferences, a Federal Law Enforcement Ammunition and Ballistics Seminar and Oehler's Ballistic Instrumentation). Mr. Bredsten has an AA degree from Chaffey Jr. College and a BA degree from Sacramento State College and currently resides in Georgia.

Japanese Military Cartridge Handguns, 1893-1945 Harry Derby, James D. Brown, 2003 When originally published in 1981, *The Hand Cannons of Imperial Japan* was heralded as one of the most readable works on firearms ever produced. To arms collectors and scholars, it remains a prized source of information on Japanese handguns, their development, and their history. In this new Revised and Expanded edition, original author Harry Derby has teamed with Jim Brown to provide a thorough update reflecting twenty years of additional research. The authors have retained the format and much of the text of the original edition, focusing on military cartridge arms from the 1893-1945 period. Signal pistols, foreign-procured military handguns, ammunition, holsters, and accessories are also covered. Significant changes are included based on new findings, and a great deal of new information has been added, together with color illustrations of significant specimens. A number of newly discovered variants are identified and described, and expanded tables of reported serial numbers and production data are provided. Coverage and explanation of Japanese markings has been greatly enhanced, and a detailed

study of inspection marks on the most widely known Types 14 and 94 is included. An appendix on valuation has also been added, using a relative scale that should remain relevant despite inflationary pressures. For the firearms collector, enthusiast, historian or dealer, this is the most complete and up-to-date work on Japanese military handguns ever written. Like its predecessor, it is certain to become a classic firearms reference and a benchmark for further research.

Stalkers and Shooters Kevin Dockery, 2007-07-03 Now in paperback! From the author of the Navy SEALs Oral History series—an intimate look at the world's most efficient and deadly warriors. Snipers have a rich history. This fascinating book follows their tasks and techniques from the Revolutionary and Civil Wars through both World Wars, to the Korean War and Vietnam—the genesis of modern sniping—to the current conflicts in the Middle East. Also, readers will see how sniping has evolved on the civilian side in law enforcement. Readers will learn about the tools of the trade, but most

importantly, they will hear from the experts themselves: military snipers, as well as civilian police and SWAT snipers. Capturing the suspense and action of the hunt, the words of these men draw readers into the close-knit, little-known world of men who need only one bullet to get the job done.

Guide to Guns and Control Vincent Bronson, 2021-02-11 The history of guns rides right along with the evolution of our armies and play a key role in changing the way wars were fought. This dates back to the early days of the 10th century and all the way up to modern times. During this time guns have experienced intense technical advances and economic developments that have increased the practicalness and also the lethality of guns. The first gun and gunpowder are widely regarded, although still disputed, to come from China during the 10th and 9th centuries, respectively. In the 10th century, the Chinese invented Fire-spurting lances which consisted of a bamboo rod or a metal rod to hold the gunpowder or the huo yao, which means fire-chemical. Huo Yao was an ancient Chinese invention that was actually used historically as a cure for indigestion. While Chinese alchemists were actually seeking the elixir of immortality they accidentally discovered the volatile and explosive elements of this

black powder. The fire-spurting lances were used during the Jin-Song wars within the Song dynasty era that began in 960 to 1279. These fire-spurting lances are recorded as the devices that were the first guns and also the first known use of gunpowder, in war or otherwise. The design of the fire-spurting lance was generally a small bamboo or bronze/iron casted rod that could be operated by a single person that would spew fire and lead balls at their opponent. The Chinese also created a more cannon-like device that would be held up by modern wooden frames and spurt gunpowder filled bombs that would explode upon impact causing great confusion and disarray and of course, death. These proto-cannons were aptly named Flying-cloud Thunderclap Eruptors or Feiyun Pilipao, in Chinese. These devices which mark the first uses of gunpowder-based weapons and artillery were described in detail in the Huolongling or the Fire Drake manual. This manuscript was written by Jiao Yu and Liu Bowen who were military officers, philosophers, and political advocates during the early Ming Dynasty (1368-1644). The Europeans first started receiving gun powder from the Chinese, as well as silk and paper, via the Silk Road trade route. As Europe received the gunpowder it was applied

rather quickly to the cannons in the battlefield which were part of the early 13th-century technological advancements which began to mark the end of the medieval era. The cannon became quite popular as it annihilated troops regardless of their fast horses and heavy, steel armor. After the initial invention of cannons, the concept of firing a big fiery ball of lead towards the enemies began to be conceptualized into a device that could be handled and operated by individuals. This conceptualization resulted in what is the first known hand-held gun and is referred to as the Hand-Cannon. It is essentially a hunk of iron that is hand-forged into two parts. The first part was the long barrel part to hold the projectile and a pole or handle that the gun wielder would hold. To fire the weapon the wielder, or sometimes an assistant, would hold a live flame to the end of the barrel that would ignite the gunpowder and fling the projectile outwards. Ammunition was generally sparse in the 13th century so anything would be used in place of an iron ball such as stones, nails or anything else they could find. The Hand-cannon grew in popularity over the course of the 13th century. The weapon had many characteristics that rendered it useful above that of swords and bows in favorable circumstances. Archers and swordsmen required

lifelong devotion towards their practice to be able to attain a level of skill that was useful in battle. The hand-cannon was able to be used skillfully with very little training and was also cheap and able to be produced in mass quantity.

The New Weapons of the World Encyclopedia Diagram Group,2007-08-21 This guide covers the entire history of weapons, from the earliest, most primitive instruments up to remarkable advances in modern defense and warfare. Comprehensively illustrated, with diagrams, charts, photographs, and much more.

Tools of War Syed Ramsey,2016-09-01 The Medieval period of history was extremely violent. The quest for wealth and power was driven by the violent society of the European countries. Massive stone castles were built to act as power bases. Lands were subject to invasion leading to wars, battles and siege situations. This was the period of the Norman conquest and the battle of Hastings in England. Warfare, siege warfare and weapons strategy and tactics were subject to change due to new weapons ideas and changes in Medieval technology and architecture. The fighting in Europe had a

brief respite when the attentions of the Medieval warlords turned their attention to the Holy Land when the Medieval Weapons were used by the religious knights who fought in the Crusades. This book has been written keeping in view the requirements of undergraduate and postgraduate students and research scholars in the area of weapons and warfare and Military history.

Mercenaries: A Guide to Private Armies and Private Military Companies Alan Axelrod,2013-12-27

Mercenaries have been active in battle from the beginning of military history and, as private armies and military support firms, they are a major component of warfare today. Security, military advice, training, logistics support, policing, technological expertise, intelligence, transportation—all are outsourced to a greater or lesser degree in the U.S. military. However, privatization is not a uniquely American phenomenon. Countries as diverse as Saudi Arabia and Australia rely on privatization in one form or another. Historically, heads of state, politicians, and other administrators have justified use of

mercenaries on the basis of their effectiveness, and cost-savings. These reasons and others continue to serve as rationales for use of private military companies in military strategy. *Mercenaries: A Guide to Private Armies and Private Military Companies* provides a comprehensive survey and guide to mercenary forces, entrepreneurs, and corporations active on the international military scene today, including a concise history of mercenaries and private armies on land, sea, and in the air. Narrative chapters are amply supplemented by sidebars including biographies of major figures, key statistics, historical and current documents, contracts, and legislation on private armies and outsourced military services. Each chapter includes a bibliography of books, journal articles, and web sites, and a general bibliography concludes the entire work.

Guns Of The Old West Charles Edward Chapel,2016-03-28 An Essential Compendium for Any Firearms or Old West Aficionado, richly and comprehensively illustrated. Written by one of the foremost firearms experts of the twentieth century, Charles Edward Chapel's Guns of the Old West is an exhaustively researched document that not only boasts a significant collection of antique Western

guns, but also categorizes the firearms into easy-to-reference sections. Starting with an introductory chapter on the origins of guns and their earliest uses on the frontier, Chapel covers everything from muskets to rifles, pistols to revolvers, and shotguns to martial arms. Three whole chapters are dedicated to the rise and fall of the famous Deringer pistol. And as much as *Guns of the Old West* is an encyclopedic reference manual, it also contains fascinating historical literature that frames the world in which these guns were used. Buffalo guns and hunters are covered, along with martial arms of the post-Civil War era. The gun collection of famous collector and hunter President Theodore Roosevelt is given its own chapter. Illustrated with nearly five hundred illustrations, as well as important artwork from the Western period from artists such as Frederic Remington, *Guns of the Old West* is an essential work for gun collectors and American history enthusiasts.

Observations Upon the History of Hand Fire-Arms and Their Appurtenances Samuel

Meyrick, 2010-05 This fascinating document was a paper first published by the Society of Antiquaries in 1829. Its significance lies both as an able and well documented review of the early history of hand

firearms, and a summary of the state of knowledge of that subject in the 1820's. Many of the earliest shooting and hunting books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. Home Farm Books are republishing many of these classic works in affordable, high quality, modern editions, using the original text and artwork.
