The Royal Air Force at Home Ian Watson,2010-06-19 Military public relations endeavors ultimately seek to build a sense of common interests and aims, and so generally foster good relations with the people they defend, and there in ensure a stable society. The armed forces when engaging on any public relations exercise, have traditionally sought to provide an entertaining spectacle. For years this has been typified by parades, bands, mock battles, drill displays and other relevant feats of military prowess which have captured the imagination of the public and inspired potential recruits. The 20th Century brought a new dimension to the field of warfare and subsequently added a new strand to the fabric of public ceremony and displays by the armed forces. That new dimension was the arrival of powered flight.Display flying began within five years of the Wright Brothers making their milestone first flight. The first events staged in Britain which centered on demonstrations by flying machines, were organized by the town councils of Blackpool and Doncaster and were held within days of each other in October 1909. 1920 was the year that the first of the famed and legendary Hendon Air Pageants was staged, and this is where military air shows traditionally began. The Hendon Displays were organized and staged by the still fledgling Royal Air Force and it was probably due in no small part to the prestige and spectacle of this fresh new dimension of military pageantry, together with other like events held at RAF airfields through the next two decades, that the very existence of the RAF was saved from the threat of abolition. The history of the RAF's commitment (one that compares almost uniquely with other air forces) toward display flying through the years after World War II has now come of age. This account of their record in this often overlooked but then again traditional field of military customs, describes and illustrates the major public RAF events since 1920.

Defence Procurement Great Britain. Parliament. House of Commons. Defence Committee,2004 The Committee's findings include that the Smart Acquisition procurement programme, introduced by the Ministry of Defence (MoD) in 1998, has failed to deliver on almost all counts. In 2002-03, the top 20 defence equipment projects experienced in-year cost increases totalling £3.1 billion, as well as time delays on promised delivery dates. The head of the Defence Procurement Agency has found that only one of the seven principles underlying Smart Acquisition has been implemented in full, and

a fundamental overhaul of the initiative has been announced. On specific projects, the Committee's findings include that the in-service date for Eurofighter/Typhoon was achieved during 2003, a total of 54 months late; and an assessment phase contract for the Future Rapid Effect System (FRES) is to be placed at the end of the year, although there are concerns that the in-service date of 2009 is unrealistic.

Introduction to UAV Systems Paul G. Fahlstrom, Thomas J. Gleason, 2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. Introduction to UAV Systems, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV programs. Introduction to UAV Systems, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.
