Headphones: Buyer's Guide 2015 Matthew Hollinder,2015-03-13 Headphones can be considered loudspeakers that were specifically created to be placed over the ears of user's. They are electrical devices that convert electrical signals into sounds to be heard by the user. The main function of a headphone is to provide users with the ability to use them to privately listen to audio recordings. This is in direct contrast to a speaker that allows everyone in close proximity to hear the sound. Sometimes headphones can be referred to as ear speakers. There are many different types of headphones that have different audio reproduction abilities. They range from lightweight ear buds to heavy bass-pumping full-sized headphones that produce amazing output. These can offer a range of sound that, to date has remained a phenomenon. It allows audiophiles to hear every sound note and accurately identify every pitch. The average user will unlikely be able to differentiate the various sounds and pitches. An experienced listener, however, is more likely to easily identify the difference.

Mind Tavern Stark Hunter,2024-02-02 This book is about the best 'Headphone Music' ever recorded, at least in the opinion of California writer, Stark Hunter-a baby boomer and old hippie, born in 1952. With a lifetime of listening to all genres of music under his belt, it is his opinion this book contains the best music to hear while wearing headphones, or in today's vernacular, ear buds. Consisting of 27 recommended headphone playlists, Hunter spent 13 years reading and researching articles on classical and contemporary music history, plus spending hundreds, perhaps thousands, of hours exploring and listening to recommended albums, cassettes and 8-track tapes, a majority of which were popular in the booming postwar era of the 50's, 60's and 70's. It is hoped the readers of this book will approach these music playlists with calm and curious equanimity. It is also recommended that the reader actually makes the effort to look up these carefully chosen musical masterpieces, and spend quality time listening to them, preferably wearing headphones or ear buds. That is the point of this book. If truth be known, it is a far different (and more satisfying) listening experience when no one else can hear what you, the listener, is hearing-that is, wonderful musical sounds in the privacy of your own ears and mind. There is an indescribable intimacy involved when it is just you, the listener, interacting with the music. Thank goodness for headphones-they provide a Cone of Silence, wherein listeners can escape to their own private worlds of music and sound. Welcome to Mind Tavern

Individualized Binaural Technology Bruno Sanches Masiero, 2012-12-20 In this work the importance of individualization in binaural technique is investigated. The results extend the present knowledge on the efficient measurement of individual head-related transfer functions (HRTFs) and highlight the importance of individual equalization filters in binaural reproduction, using both loudspeakers and headphones. Moreover, an integrated framework for the calculation of such equalization filters is presented. An innovative measurement setup was developed to allow the fast acquisition of individual HRTFs. The hardware was designed to be compatible with the range extrapolation technique. An individual HRTF dataset with 4000 directions can be measured in less than 6 minutes with this new setup. A framework was presented that integrates causality constraints to the regularized frequency domain calculation of crosstalk cancellation (CTC) filter. This framework also addresses the switching
