Robot Wars in the City of Materials Daniel P. Dennies, PhD, PE, FASM,2013-10-28 Twelve-year-old Jordan Steel moves with his family from California to the City of Materials in Ohio, where science and technology permeate all aspects of daily life. At his new school, the Roberts Academy, Jordan discovers the secret world of the Robotics Club and the awe-inspiring Robot Wars. Even though underclassmen are rarely allowed to join the Robotics Club and participate in the Robot Wars, Jordan gets in with his new friends, the Silver triplets. They soon forge a team called the Warriors of the Old Republic. Paris is the electronics wiz and Friday is the welding guru. Goldie brings magnetics to life, and Nick is a computer ace. Together, they learn to depend on each other's strengths to build a robot to compete in the Robot Wars. But not everyone wants an underclassman team in the Robot Wars. Jordan and his teammates can't be sure who their real friends are as they try to understand their new school, the secret Robotics Club and their competition. Even darker than some of their competitors' intentions, however, is a secret housed in the halls of the Roberts Academy - a secret that seems drawn to Jordan and his friends.

The Coming Robot Revolution Yoseph Bar-Cohen,David Hanson,2009-04-20 Making a robot that looks and behaves like a human being has been the subject of many popular science fiction movies and books. Although the development of such a robot faces many challenges, the making of a virtual human has long been potentially possible. With recent advances in various key technologies related to hardware and software, the making of humanlike robots is increasingly becoming an engineering reality. Development of the required hardware that can perform humanlike functions in a lifelike manner has benefitted greatly from development in such technologies as biologically inspired materials, artificial intelligence, artificial vision, and many others. Producing a humanlike robot that makes body and facial expressions, communicates verbally using extensive vocabulary, and interprets speech with high accuracy is extremely complicated to engineer. Advances in voice recognition and speech synthesis are increasingly improving communication capabilities. In our daily life we encounter such innovations when we call the telephone

operators of most companies today. As robotics technology continues to improve we are approaching the point where, on seeing such a robot, we will respond with “Wow, this robot looks unbelievably real!” just like the reaction to an artificial flower. The accelerating pace of advances in related fields suggests that the emergence of humanlike robots that become part of our daily life seems to be imminent. These robots are expected to raise ethical concerns and may also raise many complex questions related to their interaction with humans.

Whole-Body Control for Multi-Contact Balancing of Humanoid Robots Bernd Henze, 2021-11-03 This book aims at providing algorithms for balance control of legged, torque-controlled humanoid robots. A humanoid robot normally uses the feet for locomotion. This paradigm is extended by addressing the challenge of multi-contact balancing, which allows a humanoid robot to exploit an arbitrary number of contacts for support. Using multiple contacts increases the size of the support polygon, which in turn leads to an increased robustness of the stance and to an increased kinematic workspace of the robot. Both are important features for facilitating a transition of humanoid robots from research laboratories to real-world applications, where they are confronted with multiple challenging scenarios, such as climbing stairs and ladders, traversing debris, handling

heavy loads, or working in confined spaces. The distribution of forces and torques among the multiple contacts is a challenging aspect of the problem, which arises from the closed kinematic chain given by the robot and its environment.

Advances in Robot Design and Intelligent Control Theodor Borangiu, 2015-08-07 This volume includes the Proceedings of the 24th International Conference on Robotics in Alpe-Adria-Danube Region, RAAD 2015, which was held in Bucharest, Romania, on May 27-29, 2015.
