Secret Luftwaffe Emergency Fighters 1944-45 Walter Meyer,2016-12-23 During mid-to-late 1944, the German military became increasingly concerned that the USAAF was about to deploy high-flying Boeing B-29 Superfortress bombers over Europe and decided to take urgent action. The Reichsluftfahrtministerium (RLM) or German Air Ministry produced a set of specifications for a new fighter aircraft propelled by a single turbojet engine that would be capable of tackling the new threat. All the largest German aircraft manufacturers were called upon to put forward designs for this 'Emergency Fighter Competition'. The winning design would be expected to not only take on the B-29 but also defeat high-altitude fast piston-engine types such as the British de Havilland Mosquito and the Lockheed P-38 Lightning too. The resulting designs were right at the cutting edge of what was technically possible in 1944 - Focke-Wulf offered what would become the Ta 183, Blohm und Voss the radical P.212, Junkers the advanced EF.128 and Messerschmitt a whole range of designs beginning with the P.1101 and progressing through the P.1106, P.1110 and P.1111. The specification called with these aircraft to be equipped with heavy cannon but the companies also considered how to arm them with the then-high-tech air-to-air rockets and missiles such as the X-4. *Luftwaffe Emergency Fighters 1944-45* examines the history of this extraordinary fighter competition and looks at the aircraft designs put forward for what might have been Germany's last hope in the air war.

Luftwaffe Emergency Fighters Robert Forsyth,2017-06-29 In late 1944, the German Air Ministry organised what it called an 'Emergency Fighter Competition' intended to produce designs for quick-to-build yet technically and tactically effective jet fighter aircraft capable of tackling the anticipated arrival of the B-29 Superfortress over Europe, as well as the British Mosquito and US P-38 Lightning which were appearing in ever greater numbers. Thus was born a cutting-edge, highly sophisticated series of aircraft including the futuristic and elegant Focke-Wulf Ta 183; the extraordinary Blohm und Voss P.212, and the state-of-the-art Messerschmitt P.1101 series. Armed with heavy cannon and the latest air-to-air rockets and missiles, these were designed to inflict carnage on American bomber formations at high speed. Using stunning three-view illustrations of each prototype along with full colour artwork, aviation expert Robert Forsyth traces the history of the extraordinary aircraft of the 'Emergency Fighter Competition', Hitler's last throw of the dice in the air war against the Allies.

Secret Projects of the Luftwaffe - Vol 1 - Jet Fighters 1939 -1945 Dan Sharp,2020-09-22 Germany's air ministry was quick to grasp the potential of the jet engine as early as 1938 and by 1939 several German aircraft manufacturers were already working on fighter designs that would utilize this new form of propulsion. Rocket engines too were seen as the way of the future and companies were commissioned to design fighters around them. As the Second World War began, the urgent need to bring these advanced new types into production saw a host of innovative aircraft designs being produced which would eventually result in Messerschmitt's Me 262 jet fighter and the Me 163 rocket-propelled interceptor. And as the war progressed, efforts were increasingly made to find better ways of utilizing jet, rocket and latterly ramjet engines in fighter aircraft. Aviation companies from across Germany set their finest minds to the task and produced some of the most radical aircraft designs the world had

ever seen. They proposed rotating wing ramjet fighters, arrowhead-shaped rammers, rocket-firing bat-winged gun platforms, sleek speed machines, tailless flying wings, tiny mini fighters and a host of others ranging from deadly looking advanced fighters to downright dangerous vertical launch interceptors. *Secret Projects of the Luftwaffe Volume 1: Jet Fighters 1939-1945* by Dan Sharp, based on original research using German wartime documents, offers the most complete and authoritative account yet of these fascinating designs through previously unseen photographs, illustrations and period documentation from archives around the world.

Aircraft of the Luftwaffe, 1935-1945 Jean-Denis G.G. Lepage, 2009-01-29 One of the most significant innovations in modern warfare has been the appearance and development of air power, a technology which demanded technical and financial investment on a whole new scale and which ultimately changed the fundamental nature of war itself. This book covers the history and development of the German air force from 1935 to 1945, with descriptions and illustrations of almost all of the Luftwaffe's airplanes, including fighters, jet fighters, dive-bombers, ground attackers, medium and heavy bombers, jet bombers, seaplanes, flying boats and carrier planes, transport and gliders, reconnaissance and training aircrafts, helicopters, and many futuristic projects and other rarities.

Secret Wings of World War II Lance Cole, 2015-06-30 There are many myths and legends surrounding the advanced German aeronautical technology of the Second World War. There are also facts and proven events. Yet within these stories and behind these facts lie conspiracy theories, mistaken assumptions and denials that seem to contradict the evidence. So what really happened? How far ahead were the German scientists? And, of even greater interest, why and how? There have been other books about advanced German wartime aeronautics, yet few authors have fully examined the detail of the designs and their relevance to the fighter and bomber legends of the 1950s and '60s, let alone the current crop of military and civil all-wing or blended-wing aircraft. This book charts the story from its origins, through current-day innovations and beyond, into the all-wing future of tomorrow.

Captured Eagles Frederick A. Johnsen, 2014-10-20 The growth in size, lethality, and technology of the German Luftwaffe was of concern to some defense planners in the United States before American entry into the war. Learning about the Luftwaffe became a significant effort once the conflict broke out in Europe. From defectors with German aircraft to battlefield trophies and combat crew reports, the race to understand German aerospace technology took on sometimes heroic proportions. After the war, German technology infused American aerospace developments in many ways: German ribbon parachutes were evaluated for high-speed bailouts; sweptwing leading edge slat technology benefited the F-86 Sabre; overall comprehension of sweptwing benefits to fast jet aircraft was validated; pulse jet V1s and supersonic V2 rockets boosted American drone weapon, ballistic missile, and space exploration efforts. In this volume Frederick A. Johnsen traces that path of discovery.

Last Days of the Luftwaffe Manfred Griehl,2009-04-17 Drawn from newly-available historical archives, this German air force history is "packed with many fascinating revelations." (IPMS/USA) The end of the Second World War in Europe was an epoch of complete social, cultural and technological upheaval. In the realm of military and aviation history this period was revolutionary. The eclipse of the piston-engine, and the introduction of electronic detection equipment, rockets and airborne weapons in previously unknown quantities changed the face of the air war and paved the way for post-war developments in aviation technology. Many details of this crucial phase of the war remained hidden for many years in top-secret files, but in this fascinating new history Manfred Griehl makes use of recently declassified sources, alongside his own vast collection of photographs, to provide a fresh look at the story of the Luftwaffe. Among the many aspects he covers are the new models of Bf 109 and Fw 190; the Me 262 jet plane; the establishment of He 162 squadrons; Stukas and Fw 190 fighter-bomber operations on the Eastern Front; Me 262 Blitzbombers in the West, the recruitment of 1928-born Hitler Youth into the two hundred glider schools; the increasing importance of remote-controlled air-to-air rockets; and the development of heavy bombs, remote-controlled bombs, atom bombs and Germany's chemical and bacteriological arsenal. Brimming with intriguing discoveries, such as the existence of the real-life Luftwaffe kamikaze squadron, this meticulously researched and fully illustrated book will be of interest to historians and enthusiasts alike.

Fighters of the Dying Sun Justo Miranda,2021-07-11 The first B\29 flew over Tokyo on 1 November 1944. It was a photographic reconnaissance aircraft ironically named 'Tokyo Rose'. The Ki.44 fighters of the 47th Sentai took off to intercept it but as it turned out the Superfortress flew at such an altitude and speed that they could not reach it. The Ki\44\II\Otsu had been specifically designed for this type of interception and could reach the astonishing rate of climb of 5,000 m in four minutes; however it was not good enough. During the following ten months, a devastating bombing campaign of thousands of Superfortress destroyed 67 Japanese cities and half of Tokyo. The cultural shock and the political consequences were huge, when it was realised that the Japanese industry was not able to produce the specially heat and stress\resistant metallic alloys that were required to manufacture the turbo superchargers needed by the fighters in charge of defending the Japanese mainland. They lacked the essential chromium and molybdenum metals to harden the steel. This fact thwarted the manufacturing of

numerous advanced projects of both conventional fighters and those derived from the transfer of German technology fitted with turbojets and rocket engines. They are thoroughly described in this book.
