Henschel Hs 126 B-1 ,2020-10-20 This book is a compilation of the 4-view color profiles, scale plans, and photo details of the single variant of the Henschel Hs 126B-1. Illustrated are plans in 1/72 and 1/48 scales plus drawings from wartime technical manuals. Also included are photos of the details in B&W and color.

*Henschel Hs 126* Srecko Bradic,2017-10-31 Henschel Hs 126 was a two-seater, all-metal hinged monoplane with fixed landing gear. The first prototype - Hs 126 V-1 (D-UBYN) - had its flight-test in August 1936. It was powered by a 12-cylinder liquid-cooled JUMO 210 C engine. By the end of 1937 ten preproduction Hs 126 A-0's were delivered. Aircrafts were produced at the Henschel-Werke plant and also at AGO Flugzeugwerke. Hs 126 had exceptional short landing performances. Armament consisted of two machine guns cal. 7.92 mm: pilot's fixed MG-17 in front (with 500 rounds) and defense MG-15 in the observer cockpit (with 975 rounds). For the optional close support missions it was capable to carry bombs on two side racks (2✦10 kg or 2✦50 kg). It also had radio equipment and, after gaining combat experience, some machines were equipped with side armor plates of 8 mm steel.The first combat employment of several Hs 126's took place in Spain, where they were used as tactical reconnaissance within Aufklärungsguppe 35, and where they received the code name Super Pavo. Losses in the Spanish civil war were minor. Some Henschels were also sold to Greece, Bulgaria and Estonia.At the beginning of World War II (invasion of Poland) the Hs 126's were the backbone of reconnaissance units of the Luftwaffe. From 29 staffeln this machine was deployed in 23 of them (267 Hs 126's were in combat units, of which 234 were combat-ready). However, the Polish campaign showed that Hs 126 was a vulnerable airplane. Germany lost about 41 of them to a AA fire and Polish fighter actions, and another 40 were seriously damaged.The Hs 126 participated in missions over all WW2 fronts: from Africa, the Soviet Union, and West Europe to the Balkans. On the 1st of June 1941, Hs 126's were still used by operational combat units as well as flying schools. However, rising losses resulted in withdrawing the type from combat units, but it was still presented in big numbers. For example, in March 1942 from 35 Aufklärer Staffeln on East Front 16 operated Hs 126's. On the first day of Operation Barbarossa, Germany lost 13 Hs 126's and by the December 1941 they lost 381 of them. Germans tried to accompany Hs 126's with fighter escorts during missions but this did not help much. For this reason from autumn 1941 the obsolete Henschels were replaced by the more modern Fw 189.It is worth noting that the Hs 126 played a role in the rescue of Benito Mussolini on 12th of September 1943. It made a reconnaissance mission to spot landing positions for gliders.By March 1944 only 174 Hs 126's still remained in the Luftwaffe, some of which were in service with the following combat squadrons on the Eastern Front: 13./NSGr-11 with a base in Estonia, 2./NSGr-12 with a base in Estonia/Lithuania and 2./NSGr-7 with a base in the Balkans. At that time, used as night light bombers. Behind the front line the Hs 126 was used as daytime light bomber and scout to fight the partisans, as well as communication planes in which role they served until the end of the war.Today not many parts of the Hs 126 are preserved as most were lost to the Soviet Union.

Luftwaffe Emergency Fighters Robert Forsyth,2017-06-29 In late 1944, the German Air Ministry organised what it called an 'Emergency Fighter Competition' intended to produce designs for quick-to-build yet technically and tactically effective jet fighter aircraft capable of tackling the anticipated arrival of the B-29 Superfortress over Europe, as well as the British Mosquito and US P-38 Lightning which were appearing in ever greater numbers. Thus was born a cutting-edge, highly sophisticated series of aircraft including the futuristic and elegant Focke-Wulf Ta 183; the extraordinary Blohm und Voss P.212, and the state-of-the-art Messerschmitt P.1101 series. Armed with heavy cannon and the latest air-to-air rockets and missiles, these were designed to inflict carnage on American bomber formations at high speed. Using stunning three-view illustrations of each prototype along with full colour artwork, aviation expert Robert Forsyth traces the history of the extraordinary aircraft of the 'Emergency Fighter Competition', Hitler's last throw of the dice in the air war against the Allies.

*German Aircraft Instrument Panels* Dariusz Karnas,2022-03-05 This book from the series Inside shows detailed drawings of the German aircraft instrument panels in great detail. Instrument panels of the following aircraft: Messerschmitt Bf 109 E-4, Messerschmitt Me 262 A, Heinkel He 111 P-1, Henschel Hs 126 B, Dornier Do 17 Z, Messerschmitt Bf 109 F-4, Fieseler Fi 156, Henschel HS 123, Focke Wulf Fw-190 A-3, Messerschmitt Bf 109 G-6, Messerschmitt Bf 109 G-12, and Junkers Ju 87 B-1.

**Henschel Hs 123** Robert Panek,2014 The Henschel Hs123 was a single-seat biplane dive bomber and close-support attack aircraft flown by the German Luftwaffe during the Spanish Civil War and the early years of World War II. Used also by Spain and China, it was the first combat aircraft flown by the famous ace Adolph Galland. This remarkably effective little warplane was the first dive bomber used by the fledgling Luftwaffe, and played a significant role in the campaigns in Poland, France and Russia This book describes the development and operation history of the Hs123. It contains: superb color illustrations of camouflage and markings, rare b&w archive photographs, and scale plans. Essential reading for aviation enthusiasts, historians & scale modelers. Robert Panek is aviation historian and enthusiast based in Poland, with many books to his credit. Previous titles for MMP include Yak-9 and Hs126.

**The Long Road To Desert Storm And Beyond: The Development Of Precision Guided Bombs** Major Donald I. Blackwelder,2015-11-06 This paper examines the long development of precision guided bombs to show that the accuracy attained in Desert Storm was an evolution not a revolution in aerial warfare. This evolution continues and gives offensive airpower the advantage over the defense. Guided bomb development started during World War One with the “aerial torpedo”. During World War Two the German Fritz X and Hs-293 were visually guided bombs and both experienced success against allied shipping. The Army Air Corps also developed a wide variety of TV, heat, radar, and visually guided bombs. The visually guided AZON was successful in Burma and the radar guided Bat was successful against Japanese ships. During the Korean War visually guided RAZON and TARZON bombs had some success. In Vietnam the Paveway I laser-guided bombs and Walleye TV-guided bombs were successful on a much broader scale. Paveway II and III, Walleye II, and GBU-15s were developed and successfully combat tested throughout the 1970s and 1980s. When Desert Storm initiated in 1991 there were very few guided weapons that had not been extensively tested on training ranges and in combat. The precision demonstrated to the World during Desert Storm started evolving when airpower was first envisioned as a new dimension for conducting war, and was far from a revolution. Now, the continued development of imaging infrared, laser radar, synthetic aperture radar, and millimeter wave radar autonomous seekers further increases the flexibility, range, and effectiveness of guided bombs.

**The Sukhoi Su-24** Stanislaw Krzysztof Mokwa,2020-02-19 Su-24 (Fencer) is a Soviet jet bomber with variable-geometry wings. The aircraft was supposed to be a response to the American F-111, and therefore it's structurally similar. Su-24 can operate in any weather conditions, also at night. It was designed to carry tactical nuclear weapons. In the 1960s, the military command of the Soviet Union set requirements for a new attack aircraft that would be able to operate despite strong anti-aircraft defense of NATO troops. An aircraft was expected to fly on a very low altitude at a very high speeds. Initially, it was based on Su-7 and Su-15 airframes, but due to the decision to use variable-geometry wing, it was necessary to build a completely new structure. Variable geometry allowed to achieve high speeds while maintaining good takeoff and landing characteristics. This is how Su-24 was born. The first prototype was flown on July 2, 1967 (marked as T6-1), and the second on January 17, 1970 (T6-2I). Variable-geometry wings were only used in the second prototype. In December 1971, the first serial Su-24 was built, but due to the prolonged acceptance tests (lasting until 1974), the aircraft officially did not become operational until February 1975. Su-24 was named Fencer in the NATO code.

**Psychodynamic Formulation** Deborah L. Cabaniss,Sabrina Cherry,Carolyn J. Douglas,Ruth Graver,Anna R. Schwartz,2013-03-22 How do our patients come to be the way they are? What forces shape their conscious and unconscious thoughts and feelings? How can we use this information to best help them? Constructing psychodynamic formulations is one of the best ways for mental health professionals to answer questions like these. It can help clinicians in all mental health settings understand their patients, set treatment goals, choose therapeutic strategies, construct meaningful interventions and conduct treatment. Despite the centrality of psychodynamic formulation to our work with patients, few students are taught how to construct them in a clear systematic way. This book offers students and practitioners from all fields of mental health a clear,

practical, operationalized method for constructing psychodynamic formulations, with an emphasis on the following steps: DESCRIBING problems and patterns REVIEWING the developmental history LINKING problems and patterns to history using organizing ideas about development. The unique, up-to-date perspective of this book integrates psychodynamic theories with ideas about the role of genetics, trauma, and early cognitive and emotional difficulties on development to help clinicians develop effective formulations. Psychodynamic Formulation is written in the same clear, concise style of Psychodynamic Psychotherapy: A Clinical Manual (Wiley 2011). It is reader friendly, full of useful examples, eminently practical, suitable for either classroom or individual use, and applicable for all mental health professionals. It can stand alone or be used as a companion volume to the Clinical Manual.

**Operation Barbarossa: the Complete Organisational and Statistical Analysis, and Military Simulation Volume IIA** Nigel Askey, 2013-11-01 Operation Barbarossa: Volume IIA concerns the Wehrmacht. All the significant German weapon systems and combat squads used in the campaign are analysed using the quantitative methodology detailed in Volume I, along with the contextual history. An assessment of each weapon system's inherent 'combat power' is provided, as well as attributes such as the relative anti-tank, anti-personnel and anti-aircraft values. Volume IIA then focuses on the detailed Kriegstarkenachweisungen (KStN, or TOE) for German land units (including those in the West), as well as the unit's actual organisation and equipment. All significant units in the German Army (Heer), Waffen SS, Luftwaffe and security forces are included; ranging from the largest panzer divisions, down to small anti-aircraft companies, military-police units, Landeschützen battalions, and rail-road and construction companies. In all cases the data is presented in detailed tables, using the weapon systems and combat squads previously analysed.

**Towards a sustainable, participatory and inclusive wild meat sector** Coad, L., Fa, J.E., Abernethy, K., Van Vliet, N., Santamaria, C., Wilkie, D., El Bizri, H.R., Ingram, D.J., Cawthorn, D-M., Nasi, R., 2019-01-30 The meat of wild species, referred to in this report as 'wild meat', is an essential source of protein and a generator of income for millions of forest-living communities in tropical and subtropical regions. However, unsustainable harvest rates currently

**Henschel Hs 126** Robert Panek, 2021-10-15 This new photo album is number 30 in the MMPBooks/Stratus Camera On series and is the first to cover in such photographic detail the usage of the Henschel Hs 126 aircraft. This book contains 140+ photographs mostly taken by the average German soldier and is an invaluable reference for military historians and modellers alike. A4 size, 80 pages.

**Preventing Disease Through Healthy Environments** Annette Prüss-Üstün, Jennyfer Wolf, Carlos Corvalán, Robert Bos, World Health Organization, Dr. Maria Neira, 2016 The main message emerging from this new comprehensive global assessment is that premature death and disease can be prevented through healthier environments--and to a significant degree. Analysing the latest data on the environment-disease nexus and the devastating impact of environmental hazards and risks on global health, backed up by expert opinion, this report covers more than 130 diseases and injuries. The analysis shows that 23% of global deaths (and 26% of deaths among children under five) are due to modifiable environmental factors--and therefore can be prevented. Stroke, ischaemic heart disease, diarrhoea and cancers head the list. People in low-income countries bear the greatest disease burden, with the exception of noncommunicable diseases. The report's unequivocal evidence should add impetus to coordinating global efforts to promote healthy environments--often through well-established, cost-effective interventions. This analysis will inform those who want to better understand the transformational spirit of the Sustainable Development Goals agreed by Heads of State in September 2015. The results of the analysis underscore the pressing importance of stronger intersectoral action to create healthier environments that will contribute to sustainably improving the lives of millions around the world.--Page 4 of cover.

**Dietary Reference Intakes for Water, Potassium, Sodium, Chloride, and Sulfate** Institute of Medicine, Food and Nutrition Board, Standing Committee on the Scientific Evaluation of Dietary Reference Intakes, Panel on Dietary Reference Intakes for Electrolytes and Water, 2005-06-18 Dietary Reference Intakes for Water, Potassium, Sodium, Chloride, and Sulfate The Dietary Reference Intakes (DRIs) are quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. This new report, the sixth in a series of reports presenting dietary reference values for the intakes of nutrients by Americans and Canadians, establishes nutrient recommendations on water, potassium, and salt for health maintenance and the reduction of chronic disease risk. Dietary Reference Intakes for Water, Potassium, Sodium, Chloride, and Sulfate discusses in detail the role of water, potassium, salt, chloride, and sulfate in human physiology and health. The major findings in this book include the establishment of Adequate Intakes for total water (drinking water, beverages, and food), potassium, sodium, and chloride and the establishment of Tolerable Upper Intake levels for sodium and chloride. The book makes research recommendations for information needed to advance the understanding of human requirements for water and electrolytes, as well as adverse effects associated with the intake of excessive amounts of water, sodium, chloride, potassium, and sulfate. This book will be an invaluable reference for nutritionists, nutrition researchers, and food manufacturers.

**Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome** Institute of Medicine, Board on the Health of Select Populations, Committee on the Diagnostic Criteria for Myalgic Encephalomyelitis/Chronic Fatigue Syndrome, 2015-03-16 Myalgic encephalomyelitis (ME) and chronic fatigue syndrome (CFS) are serious, debilitating conditions that affect millions of people in the United States and around the world. ME/CFS can cause significant impairment and disability. Despite substantial efforts by researchers to better understand ME/CFS, there is no known cause or effective treatment. Diagnosing the disease remains a challenge, and patients often struggle with their illness for years before an identification is made. Some health care providers have been skeptical about the serious physiological - rather than psychological - nature of the illness. Once diagnosed, patients often complain of receiving hostility from their health care provider as well as being subjected to treatment strategies that exacerbate their symptoms. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome proposes new diagnostic clinical criteria for ME/CFS and a new term for the illness - systemic exertion intolerance disease (SEID). According to this report, the term myalgic encephalomyelitis does not accurately describe this illness, and the term chronic fatigue syndrome can result in trivialization and stigmatization for patients afflicted with this illness. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome stresses that SEID is a medical - not a psychiatric or psychological - illness. This report lists the major symptoms of SEID and recommends a diagnostic process. One of the report's most important conclusions is that a thorough history, physical examination, and targeted work-up are necessary and often sufficient for diagnosis. The new criteria will allow a large percentage of undiagnosed patients to receive an accurate diagnosis and appropriate care. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome will be a valuable resource to promote the prompt diagnosis of patients with this complex, multisystem, and often devastating disorder; enhance public understanding; and provide a firm foundation for future improvements in diagnosis and treatment.

**Aircraft of the Luftwaffe, 1935-1945** Jean-Denis G.G. Lepage, 2009-01-29 One of the most significant innovations in modern warfare has been the appearance and development of air power, a technology which demanded technical and financial investment on a whole new scale and which ultimately changed the fundamental nature of war itself. This book covers the history and development of the German air force from 1935 to 1945, with descriptions and illustrations of almost all of the Luftwaffe's airplanes, including fighters, jet fighters, dive-bombers, ground attackers, medium and heavy bombers, jet bombers, seaplanes, flying boats and carrier planes, transport and gliders, reconnaissance and training aircrafts, helicopters, and many futuristic projects and other rarities.

**Nanotechnology in Dermatology** Adnan Nasir, Adam Friedman, Steven Wang, 2012-12-02 Nanotechnology in Dermatology is the first book of its kind to address all of the important and rapidly growing aspects of nanotechnology as it relates to dermatology. In the last few years there has been an explosion in research and development for products and devices related to nanotechnology, including numerous applications for consumers, physicians, patients, and industry. Applications are underway in medicine and dermatology for the early detection, diagnosis, and targeted therapy of disease, and nanodesigned materials and devices are

expected to be faster, smaller, more powerful, more efficient, and more versatile than their traditional counterparts. Written by experts working in this exciting field, Nanotechnology in Dermatology specifically addresses nanotechnology in consumer skin care products, in the diagnosis of skin disease, in the treatment of skin disease, and the overall safety of nanotechnology. The book also discusses future trends of this ever-growing and changing field, providing dermatologists, pharmaceutical companies, and consumer cosmetics companies with a clear understanding of the advantages and challenges of nanotechnology today.

*X-Planes* Manfred Griehl,2012-10-24 Renowned German aviation specialist Manfred Griehl has collected a unique and valuable selection of photographs of Luftwaffe projects that never made it into battle. They remained on the drawing board or at prototype stage either because they were deemed unsuitable or the developers simply ran out of time and the projects never went into production. Most photographs come from the development sites and testing grounds of the major manufacturers of Nazi Germany: companies such as Dornier, Junkers, Focke-Wulf and Heinkel all received funding from the government to develop bigger and faster aircraft. A huge amount of private testing went on with major organizations such as Daimler-Benz, BMW and Siemens investing huge amounts in new engine systems and other advances such as radar. This book also details the innumerable alterations that were made to existing service aircraft to equip them for new roles. There are examples of Fw190s developed for the delivery of chemical and toxic weapons, the high altitude Junkers EF 61, the early prototype WNF 342 helicopter as well as numerous examples of developmental jet fighters that could very well have been realized had it not been for the effectiveness of the Allied bombing campaign in restricting the supply of necessary materials.
