HIV Exceptionalism Adia Benton, 2015-02-15 WINNER, 2017 RACHEL CARSON PRIZE, SOCIETY FOR THE SOCIAL STUDIES OF SCIENCE In 2002, Sierra Leone emerged from a decadelong civil war. Seeking international attention and development aid, its government faced a dilemma. Though devastated by conflict, Sierra Leone had a low prevalence of HIV. However, like most African countries, it stood to benefit from a large influx of foreign funds specifically targeted at HIV/AIDS prevention and care. What Adia Benton chronicles in this ethnographically rich and often moving book is how one war-ravaged nation reoriented itself as a country suffering from HIV at the expense of other, more pressing health concerns. During her fieldwork in the capital, Freetown, a city of one million people, at least thirty NGOs administered internationally funded programs that included HIV/AIDS prevention and care. Benton probes why HIV exceptionalism—the idea that HIV is an exceptional disease requiring an exceptional response—continues to guide approaches to the epidemic worldwide and especially in Africa, even in low-prevalence settings. In the fourth decade since the emergence of HIV/AIDS, many today are questioning whether the effort and money spent on this health crisis has in fact helped or exacerbated the problem. *HIV Exceptionalism* does this and more, asking, what are the unanticipated consequences that HIV/AIDS development programs engender?

HIV Prevention Kenneth H. Mayer, H.F. Pizer, 2009-03-13 HIV/AIDS continues to be the pandemic of our times and there has not been a comprehensive medically based AIDS prevention book published in the last 5 years. It is estimated that 36 to 45 million people including 2-3 million children already are infected worldwide and an additional 4-7 million more are infected each year. There are about 6,000 new infections daily and about 12 million AIDS orphans. People receiving AIDS treatments feel well and have no detectable viral load, but still can infect others. And even when a vaccine is found, it will take many years before it can be administered across the developing world. * Discusses all aspects of AIDS prevention, from epidemiology, molecular immunology and virology to the principles of broad-based public health prevention interventions. * Special focus on the array of interventions that have been proven effective through rigorous study * Identifies new trends in HIV/AIDS epidemiology and their impact on creating and implementing prevention interventions * Incorporates virology, biology, infectious diseases, vaccinology, microbicides and research methodologies into AIDS prevention

Remaking a Life Celeste Watkins-Hayes, 2019-08-20 In the face of life-threatening news, how does our view of life change—and what do we do to transform it? *Remaking a Life* uses the HIV/AIDS epidemic as a lens to understand how women generate radical improvements in their social well being in the face of social stigma and economic disadvantage. Drawing on interviews with nationally recognized AIDS activists as well as over one hundred Chicago-based women living with HIV/AIDS, Celeste Watkins-Hayes takes readers on an uplifting journey through women's transformative projects, a multidimensional process in which women shift their approach to their physical, social, economic, and political survival, thereby changing their viewpoint of “dying from” AIDS to “living with” it. With an eye towards improving the lives of women, *Remaking a Life* provides techniques to encourage private, nonprofit, and government agencies to successfully collaborate, and shares policy ideas with the hope of alleviating the injuries of inequality faced by those living with HIV/AIDS everyday.

The River Edward Hooper, 2000 A British medical journalist offers a meticulously researched look at HIV and its potential source, discussing the history of this lethal epidemic, analyzing a number of theories concerning its origins, and investigating current scientific inquiries into HIV, AIDS, and the search for a cure. Reprint. 15,000 first printing.

The Search for an AIDS Vaccine Christine Grady, 1995-05-22 The book is a balanced and comprehensive treatment of an important social issue. It is accessible to the general reader and belongs in public as well as academic libraries. -- Religious Studies Review Painstaking analysis of the knotty ethical problems involved in human-subjects research, and a well-thought-out proposal for a community approach to conducting field trials for an HIV vaccine.... Highly recommended for medical ethicists and anyone concerned about the AIDS epidemic and how HIV research is conducted.Â -- Kirkus Reviews ... a carefully reasoned account of how research for and trial of a preventive vaccine differ from the methods used to discover a therapy.Â -- Booklist I highly recommend reading this book which I would attest to be a thrilling, ethically challenging, and informative descent into the allopathic solution. -- Ryan Hosken, Bastyr University Library Newsletter As the scientific effort to produce an efficacious vaccine continues, [Grady's] work provides an ethical compass that will guide us well, regardless of where phase III HIV vaccine trials ultimately occur. -- Journal of the American Medical Association Highly recommended... -- AIDS Book Review Journal A remarkable treatment of a most difficult and complex subject... Grady's book is of special merit because it is simple, readable, and understandable, while conveying in-depth perceptions that are critical to the reader. A useful and essential reference work for those who would engage in the initiative to bring about a resolution of a mighty human health problem. -- Maurice R. Hilleman, Ph.D., D.Sc., Director, Merck Institute for Therapeutic Research Dr. Grady's important study captures the complexity of the

search for an AIDS vaccine with startling clarity. Her insights into the full range of forces that shape our national response to AIDS vaccine development should read like signposts to vaccinologists, AIDS community activists, and most importantly, the Public Health Service. An impressive contribution. -- Derek Hodel, Gay Men's Health Crisis This book is recommended to medical ethicists, those involved in non-HIV vaccine trials, and all persons involved in HIV vaccine trials, including investigators, sponsors, study subjects and communities at risk. -- Journal of Health Politics, Policy and Law The creation of a vaccine now seems the best hope for controlling AIDS. Yet developing and testing an HIV vaccine raises a host of difficult ethical issues. These concerns are the focus of this timely and important book. Essential reading for everyone interested in ethics and the conduct of HIV vaccine research.

Virus Hunt Dorothy H. Crawford, 2013-06-27 The hunt for the origin of the AIDS virus began over twenty years ago. It was a journey that went around the world and involved painstaking research to unravel how, when, and where the virus first infected humans. Dorothy H. Crawford traces the story back to the remote rain forests of Africa - home to the primates that carry the ancestral virus - and reveals how HIV-1 first jumped from chimpanzees to humans in rural south east Cameroon. Examining how this happened, and how it then travelled back to Colonial west central Africa where it eventually exploded as a pandemic, she asks why and how it was able to spread so widely. From hospital intensive care wards to research laboratories and the African rain forests, this is the wide-ranging story of a killer virus and a tale of scientific endeavour.

HIV Protocols Nelson Michael, Jerome H. Kim, 2008-02-01 The worldwide impact of infection with human immunodeficiency virus type 1 (HIV- is reflected in the cumulative number of HIV- 1 infections, which is now predicted to exceed 40 million by the year 2000---equivalent to the number of humans who perished in World War II. The medical and scientific response to the HIV-1 pandemic has steadily grown since its recognition in 1981. The outlay by the United States alone for HIV research funded by the National Institutes of Health in 1997 was \$1. 4 billion. Laboratory-based HIV research has brought together academic clinicians, retrovirologists, molecular biologists, and immunologists in the formation of research teams attempting to dissect the viral and host factors contributing to disease pathogenesis. Increasing focus is being placed on those aspects of viral biology and host immune responses that bear on the development of vaccines to prevent HIV infection. HIV Protocols reflects the state of HIV research in several ways. First, chapters are organized into four sections: Virology, Molecular Biology, Humoral Immunology, and Cellular Immunology. This organization is a natural consequence of the diverse scientific disciplines that have been attracted to HIV research. Second, the chapters reflect such diverse research directions as viral coreceptor usage, quantitation of viral genomes, HIV promoter function, B-cell epitope mapping, and measurements of T-cell function, each of which bears on the goal of understanding the viral and host immune responses that will be critical to the design of effective preventive vaccines.

HIV and the Blood Supply Institute of Medicine, Committee to Study HIV Transmission Through Blood and Blood Products, 1995-10-05 During the early years of the AIDS epidemic, thousands of Americans became infected with HIV

through the nation's blood supply. Because little reliable information existed at the time AIDS first began showing up in hemophiliacs and in others who had received transfusions, experts disagreed about whether blood and blood products could transmit the disease. During this period of great uncertainty, decision-making regarding the blood supply became increasingly difficult and fraught with risk. This volume provides a balanced inquiry into the blood safety controversy, which involves private sexual practices, personal tragedy for the victims of HIV/AIDS, and public confidence in America's blood services system. The book focuses on critical decisions as information about the danger to the blood supply emerged. The committee draws conclusions about what was done—and recommends what should be done to produce better outcomes in the face of future threats to blood safety. The committee frames its analysis around four critical areas: Product treatment—Could effective methods for inactivating HIV in blood have been introduced sooner? Donor screening and referral—including a review of screening to exclude high-risk individuals. Regulations and recall of contaminated blood—analyzing decisions by federal agencies and the private sector. Risk communication—examining whether infections could have been averted by better communication of the risks.

Notorious H.I.V. Thomas C. Shevory, 2004 Nushawn Williams, accused of deliberately infecting numerous individuals with AIDS, was subsequently dubbed an AIDS predator in the U.S. national media and is now incarcerated. His treatment by the media and the judicial system, argues Shevory (politics, Ithaca College), is unsupported by the evidence.

Derdeyn, 2007-06-22 Entry Inhibitors in HIV Therapy details the current status of this relatively new and very dynamic class of inhibitors. A unique overview of obstacles and accomplishments is presented. The impact of viral sequence diversity on this class of inhibitors is discussed, and a connection between basic research and clinical studies is shown. The book presents a unique collection of contributors from basic research, pharmaceutical research, and the clinic.

HIV on TV Malynnda A. Johnson, 2018-09-15 HIV on TV: Popular Culture's Epidemic is a critical analysis of the ways television has portrayed HIV. Spanning time, genres, and viewpoints HIV on TV offers a challenge for viewers, media writers, even political figures in the ways they think about, and frame, the continued epidemic that is HIV.

Genetic Structure and Regulation of HIV William A. Haseltine, Flossie Wong-Staal, 1991 Based on a conference sponsored by the Harvard AIDS Institute, this volume examines the control of gene expression of the human immunodeficiency virus type 1 (HIV-1), the human T cell leukemia virus types 1 and 2 (HTLV-1 and 2) and related retroviruses.
