

Highliner

William B. McCloskey

Highliners William B. McCloskey, 2013-07-01 Highliners are the elite of the fishing world, the skippers and crews who make the biggest catches—salmon, king crab, halibut, shrimp—and deliver them first to the bustling canneries of Kodiak and Dutch Harbor. For these men—and for their women—the safe eight-hour day does not exist. It never will. Some fishermen get rich, many die broke. But they find a special joy in their work that can never be matched by the easier world of the landsman. No matter how great the hardship or how bad the storm, the highliners put out to sea in their primitive battle against the elements. The protagonist of the novel is Hank Crawford, a young greenhorn who first comes to Alaska to work in a cannery to earn money while on summer vacation from college. He is quickly hooked by the fisherman's life, and this novel re-creates how a young man becomes a highliner. He succeeds because he is young enough, strong enough, and brave enough. He learns the brutal business from hard-fisted skippers, penny-pinching cannery managers, and the pirates of the fishing world. Hank also meets the tough women who endure the hardships of Alaska alongside their men. Journey with him as he learns to survive the elements (100-mile-an-hour winds, ice storms, tidal waves, and fire at sea) and attempts to become a highliner.

Highliners William B. McCloskey, 1979 Hank Crawford comes to Kodiak as a college student to work in the canneries during the summer. But he is inexorably drawn to the water and the hard, often brutal existence of the fishermen, and, ultimately, he joins their ranks.--Back cover.

Highliner Matthew McGinley, 2018-03-13 Let's face it-not everybody knows what they are doing out there. Unlicensed drivers, drunk drivers or drivers under the influence of drugs or other substances, drivers with revoked, suspended or no licenses, and drivers with little to no patience-these drivers are unqualified to be in control of a motor vehicle, yet they are allowed to mingle with drivers who know what they are doing and have fulfilled their responsibilities, legally and ethically. This means overly congested roads, slow speeds, too many traffic lights and road rage. The inability to get anywhere because of overcrowding with unqualified drivers. Fully half of the drivers out there are unqualified, yet the state lets them drive because of money. When money comes before safety, then others are in dangers and they need a tool that will help them deal with this horrible inadequacy in the driving system. It's not more roads that we need, it's fewer drivers. And nobody _really_ wants to take public transportation, accounting for less than four percent of the commuting population, yet drivers are made to pay for a large part of that due to government bureaucracy and again, money coming before safety and people. A test was done over two decades, and due to overcrowding, busses that take up the valuable diamond lane that should be freed up for everyone, and too many unqualifieds using up the roads when they should be at home or getting around some other way, the average speed over the course of a year in any given vehicle in all conditions was 15.9 miles per hour. Traffic controls at almost every intersection, speeders, tailgaters, unsafe lane changes, failing to yield and

people who just don't know what sharing the roads means--it's all explained in Highliner and how to deal with them. If this was truly a safe society, then three things would need to occur: all cars would have to be fitted with a scanner and transmitter so that the car would not start without a valid license. Second, the car would not start if the driver was intoxicated. Third, the car would not start unless liability insurance was in effect. If these three requirements were in place, then half of the drivers would have to catch a ride with somebody else, and it would free up the thousands of miles of road space. As a reward for meeting these checkpoints, insurance companies would agree to cut the cost of liability insurance and uninsured motorist premiums in half. Since we appear to be a long way from that, Highliner can help you deal with the unqualifieds right now by showing you exactly how they drive with over 900 photographs and 200 special diagrams that show residential driving, freeway driving and arterial driving, as well as how to drive properly. Entry angles, approach angles, approach speeds, headings, lines of sight, exit angles--these may sound technical, but they really are not. Everyone needs to understand what they are, and because many of them do not know exactly what they are doing, we see all kinds of unskilled and bad driving that leads to over fourteen million traffic accidents and over 40,000 deaths each year in the United States alone. It's not supposed to be that way, and Highliner will tell you why. Whether for teen drivers or senior drivers, or drivers who have earned their privilege (NOT a right) to drive, then road rage and traffic accidents and liability across the board would all but vanish, and so would losses--losses of human lives, property and sanity. There is no other book like Highliner--The Nature, Philosophy and Science of Automobile Driving. Look inside and see for yourself. The instructions are as good today as they will be in a hundred years, since skilled and tempered driving never goes out of style. Free of religion and personal feelings, Highliner is all meat and no fluff. For intelligent drivers and those seeking knowledge. Buy it today, and you will be totally satisfied.

Highliners and Bottomfeeders Jack Sternhagen,

World Disasters Keith Eastlake, Henry Russell, Mike Sharpe, 2001-05 This fascinating book looks at some of the most horrifying and noteworthy disasters to have occurred around the world. More than 200 disasters involving aircraft, ships and trains as well as fires are analysed in detail, accompanied by 500 photographs. The entries, which are arranged chronologically, explain the background to each incident, the event itself, and the search for causes and culprits. The volume also contains a wide-ranging introduction, a bibliography, and a comprehensive index.

Rights Based Fishing P.A. Neher, Ragnar Arnason, Nina Mollett, 2012-12-06 The genesis of this conference was on a quay of the port of Bergen in March 1985. Ragnar Amason suggested to Phil Neher a small, mid-Atlantic conference on recent developments in fishery management. In the event, more than twenty papers were scheduled and over one hundred and fifty conferees were registered. Logistical complications were sorted through for a summer 1988 conference in Iceland. The really innovative management programs were in the South Pacific; Australia and New Zealand had introduced Individual Transferable Quotas (ITQs); and Iceland, Norway and Canada were also experimenting with quotas. It seemed to the program committee (Rognvaldur Hannesson and Geoffrey Waugh were soon on board) that these quotas had more or less characteristics of property rights. Property rights were also taking other forms in other places (time and area licenses, restrictive licensing of vessels and gear, traditional use rights). The idea of rights based fishing became the theme of the conference.

Social Networks and Natural Resource Management Örjan Bodin, Christina Prell, 2011-08-04 Social Network Analysis (SNA), a quantitative approach to the study of social relations, has recently emerged as a key tool for understanding the governance of natural resources. Bringing together contributions from a range of researchers in the field, this is the first book to fully explore the potential applications of SNA in the context of natural resource management. Topics covered include the role of SNA in stakeholder selection; improving fisheries management and conservation; the effect of social network ties on public satisfaction and agrarian communication networks. Numerous case studies link SNA concepts to the theories underlying natural resource governance, such as social learning, adaptive co-management and social movements theory. Reflecting on the challenges and opportunities associated with this evolving field, this is an ideal resource for students and researchers involved in many areas of natural resource management, environmental biology, sustainability science and sociology.
