The Hinode Mission Takashi Sakurai,2008-12-03 The Solar-B satellite was launched in the morning of 23 September 2006 (06:36 Japan time) by the Institute of Space and Astronautical Science, Japan Aerospace Exploration Agency (ISAS/JAXA), and was renamed to Hinode ('sunrise' in Japanese). Hinode carries three - struments; the X-ray telescope (XRT), the EUV imaging spectrometer (EIS), and the solar optical telescope (SOT). These instruments were developed by ISAS/JAXA in cooperation with the National Astronomical Observatory of Japan as domestic partner, and NASA and the Science and Technology Facilities Council (UK) as international partners. ESA and N- wegian Space Center have been providing a downlink station. All the data taken with Hinode are open to everyone since May 2007. This volume combines the ?rst set of instrumental papers of the Hinode mission (the mission overview, EIS, XRT, and the database system) published in volume 243, Number 1 (June 2007), and the second set of papers (four papers on SOT and one paper on XRT) published in Volume 249, Number 2 (June 2008). Another SOT paper cited as Tarbell et al. (2008) in these papers will appear later in Solar Physics.

*First Ten Years of Hinode Solar On-Orbit Observatory* Toshifumi Shimizu,Shinsuke Imada,Masahito Kubo,2018-03-27 This book provides the latest scientific understanding of the Sun, sharing insights gleaned from the international solar physics project Hinode. The authors (who are the main project contributors) review, from the various viewpoints, the discoveries and advances made by the on-orbit operations of the Hinode spacecraft in its first decade. Further, they present a wealth of scientifically important photographs and data from Hinode. Launched in September 2006, Hinode is the third Japanese solar observatory on orbit, and employs three highly advanced telescopes jointly developed and operated with international partners. The book describes the background of these research topics, how the Hinode telescopes have tackled various challenges, and the scientific achievements and impacts in the first 10 years. Furthermore, it explores future perspective of researches in Japan. The book will benefit undergraduate students interested in recent advance in the solar research, as well as graduate students and researchers working in solar physics, the space sciences, astronomy, and plasma physics.

Voice, Silence, and Self Christopher Bondy,2020-05-11 The Burakumin. Stigmatized throughout Japanese history as an outcaste group, their identity is still "risky," their social presence mostly silent, and their experience marginalized in public discourse. They are contemporary Japan's largest minority group—between 1.5 and 3 million people. How do young people today learn about being burakumin? How do they struggle with silence and search for an authentic voice for their complex experience?Voice, Silence, and Self examines how the mechanisms of silence surrounding burakumin issues are reproduced and challenged in Japanese society. It explores the ways in which schools and social relationships shape people's identity as burakumin within a "protective cocoon" where risk is minimized. Based on extensive ethnographic research and interviews, this longitudinal work explores the experience of burakumin youth from two different communities and with different social movement organizations.Christopher Bondy explores how individuals navigate their social world, demonstrating the ways in which people make conscious decisions about the disclosure of a stigmatized identity. This compelling study is relevant to scholars and students of Japan studies and beyond. It provides crucial examples for all those interested in issues of identity, social movements, stigma, and education in a comparative setting.

*First results from Hinode : proceedings of a workshop held at Trinity College Dublin, Dublin, Ireland, 20 - 24 August 2007* Sarah A. Matthews,2008 These proceedings are an overview of the status of the Hinode mission a year after launch with particular emphasis on instrument performance and the scientific results from the first data release. Hinode was designed to study the sun at high spatial and temporal resolution in order to answer the fundamental questions on how its magnetic fields are formed and evolve, and how their interaction with the solar plasma creates the wide variety of active phenomena that are observed on the sun. The papers presented at the conference and published in this volume contain a number of new and significant advances in this area. The conference covered a broad range of topics that included the most pressing open questions in solar physics, such as the emergence and evolution of magnetic fields, their impact on structuring and heating the solar atmosphere, the origins of the solar wind, and explosive energy release on all scales. This book

therefor provides a broad picture of the current advances in observational solar physics made by Hinode, raising a number of new questions in several areas. It is suitable for researchers and graduate students interested in solar and stellar physics and in the processes involved in magnetized plasma environments in general.--Publisher's website.

**New Millennium Solar Physics** Markus J. Aschwanden,2019-05-22 This is a follow-on book to the introductory textbook Physics of the Solar Corona previously published in 2004 by the same author, which provided a systematic introduction and covered mostly scientific results from the pre-2000 era. Using a similar structure as the previous book the second volume provides a seamless continuation of numerous novel research results in solar physics that emerged in the new millennium (after 2000) from the new solar missions of RHESSI, STEREO, Hinode, CORONAS, and the Solar Dynamics Observatory (SDO) during the era of 2000-2018. The new solar space missions are characterized by unprecedented high-resolution imaging, time resolution, spectral capabilities, stereoscopy and tomography, which reveal the intricate dynamics of magneto-hydrodynamic processes in the solar corona down to scales of 100 km. The enormous amount of data streaming down from SDO in Terabytes per day requires advanced automated data processing methods. The book focuses exclusively on new research results after 2000, which are reviewed in a comprehensive manner, documented by over 3600 literature references, covering theory, observations, and numerical modeling of basic physical processes that are observed in high-temperature plasmas of the Sun and other astrophysical objects, such as plasma instabilities, coronal heating, magnetic reconnection processes, coronal mass ejections, plasma waves and oscillations, or particle acceleration.

**The Second Hinode Science Meeting** Bruce W. Lites,2009 Au verso de la couverture : The international Hinode mission was launched from Japan on 23 September 2006. The spacecraft carries a suite of instruments that permit observations of the Sun and its atmosphere with unprecedented resolution and precision. During its first two years of operation, Hinode has enabled numerous breakthroughs in our understanding of magnetic

fields within the solar atmosphere and their relationship to the energetic solar phenomena that affect the Earth's space environment. Some of those breakthroughs were presented at the First Hinode Science Meeting held in Dublin, Ireland, in August 2007 (ASPCS Volume 397). By the time the Second Hinode Science Meeting was held in Boulder, Colorado, 29 September-3 October 2008, researchers had been able to subject Hinode data to in-depth, quantitative analyses and to make comparisons with detailed numerical and analytic models of solar phenomena. This volume presents brief summaries of work presented at the Second Hinode Science Meeting

Lady Joker, Volume 1 Kaoru Takamura, 2021-04-13 One of Japan's great modern masters, Kaoru Takamura, makes her English-language debut with this two-volume publication of her magnum opus. Tokyo, 1995. Five men meet at the racetrack every Sunday to bet on horses. They have little in common except a deep disaffection with their lives, but together they represent the social struggles and griefs of post-War Japan: a poorly socialized genius stuck working as a welder; a demoted detective with a chip on his shoulder; a Zainichi Korean banker sick of being ostracized for his race; a struggling single dad of a teenage girl with Down syndrome. The fifth man bringing them all together is an elderly drugstore owner grieving his grandson, who has died suspiciously after the revelation of a family connection with the segregated buraku community, historically subjected to severe discrimination. Intent on revenge against a society that values corporate behemoths more than human life, the five conspirators decide to carry out a heist: kidnap the CEO of Japan's largest beer conglomerate and extract blood money from the company's corrupt financiers. Inspired by the unsolved true-crime kidnapping case perpetrated by "the Monster with 21 Faces," Lady Joker has become a cultural touchstone since its 1997 publication, acknowledged as the magnum opus by one of Japan's literary masters, twice adapted for film and TV and often taught in high school and college classrooms.

Solar Surveyors Peter Bond, 2022-07-29 This is the story of humankind's quest over centuries to learn the true nature of the most dominant object in our Solar System: the Sun. Award-winning science writer Peter Bond describes in detail how our ideas about the Sun have changed over the millennia, starting with the simple observations of classical astronomy and continuing through telescopic observations to the age of nuclear physics. He shows how we discovered the Sun's basic characteristics – its distance, size, temperature and composition – and then describes how, with evermore sophisticated instruments, we have learned about the Sun's enormous energy output, its atmosphere and the explosive eruptions that blast clouds of magnetized gas and high-energy particles toward our world. Most of this book focuses on the Space Age, when suborbital rockets and satellites have probed every aspect of our nearby star. Each of these missions is described in detail, with summaries of their objectives, spacecraft designs, scientific payloads and results. The book also looks forward, describing forthcoming missions that will shed new light on remaining solar mysteries, notably the source of the energy that heats the outer corona to millions of degrees. Richly illustrated with mission photos, design diagrams, and infocharts, this book is a fascinating read for anybody interested in the Sun and our attempts to unravel its secrets.

*Geodynamic Evolution of East Antarctica* M. Satish-Kumar, 2008 Geological correlations of East Antarctica with adjoining continents have been puzzling geologists ever since the concept of a Gondwana supercontinent

surfaced. Despite the paucity of outcrops because of ice cover, difficulty of access and extreme weather, the past 50 years of Japanese Antarctic Research Expeditions (JARE) has successfully revealed vital elements of the geology of East Antarctica. This volume presents reviews and new research from localities across East Antarctica, especially from Dronning Maud Land to Enderby Land, where the geological record preserves a history that spans the Archaean and Proterozoic. The reviews include extensive bibliographies of results obtained by geologists who participated in the JARE. Comprehensive geological, petrological and geochemical studies, form a platform for future research on the formation and dispersion of Rodinia in the Mesoproterozoic and subsequent assembly of Gondwana in the Neoproterozoic to Early Palaeozoic.

*Heritage, Contested Sites, and Borders of Memory in the Asia Pacific* ,2023-10-09 Contests over heritage in Asia are intensifying and reflect the growing prominence of political and social disputes over historical narratives shaping heritage sites and practices, and the meanings attached to them. These contests emphasize that heritage is a means of narrating the past that demarcates, constitutes, produces, and polices political and social borders in the present. In its spaces, varied intersections of actors, networks, and scales of governance interact, negotiate and compete, resulting in heritage sites that are cut through by borders of memory. This volume, edited by Edward Boyle and Steven Ivings, and with contributions from scholars across the humanities, history, social sciences, and Asian studies, interrogates how particular actors and narratives make heritage and how borders of memory shape the sites they produce.
