Shang Yun-Xiang Style Xingyiquan Li Wen-Bin, Shrang Zhi-Rong, Li Hong, 2014-11-18 A modern classic, *Shang Yun-Xiang Style Xingyiquan* is essential for Xingyiquan practitioners and a useful guide for any practitioner of the Chinese martial arts. While focusing on Shang-style Xingyiquan (derived from author Li Wen-Bin's training under Grandmaster Shang Yun-Xiang), this book clearly breaks down the fundamentals of those movements and forms found in all of Xingyiquan (and other internal martial arts). Rather than simply presenting the traditional, often-cryptic poetry or songs to impart martial concepts, Li goes into great detail to explain to readers of all levels the finer points of Xingyi training. Featuring hundreds of original photographs and step-by-step explanation of movements, *Shang Yun Xiang Style Xingyiquan* is an excellent companion to Xingyiquan training of any style or school. Matrices in Combinatorics and Graph Theory Bolian Liu, Hong-Jian Lai, 2013-03-09 Combinatorics and Matrix Theory have a symbiotic, or mutually beneficial, relationship. This relationship is discussed in my paper The symbiotic relationship of combinatorics and matrix theory where I attempted to justify this description. One could say that a more detailed justification was given in my book with H. J. Ryser entitled Combinatorial Matrix Theory? where an attempt was made to give a broad picture of the use of combinatorial ideas in matrix theory and the use of matrix theory in proving theorems which, at least on the surface, are combinatorial in nature. In the book by Liu and Lai, this picture is enlarged and expanded to include recent developments and contributions of Chinese mathematicians, many of which have not been readily available to those of us who are unfamiliar with Chinese journals. Necessarily, there is some overlap with the book Combinatorial Matrix Theory. Some of the additional topics include: spectra of graphs, eulerian graph problems, Shannon capacity, generalized inverses of Boolean matrices, matrix rearrangements, and matrix completions. A topic to which many Chinese mathematicians have made substantial contributions is the combinatorial analysis of powers of nonnegative matrices, and a large chapter is devoted to this topic. This book should be a valuable resource for mathematicians working in the area of combinatorial matrix theory. Richard A. Brualdi University of Wisconsin - Madison 1 Linear Alg. Ink and Tears Rania Huntington, 2018-08-31 How does an extended family, bound by shared history, affection, and duty but divided by generation, gender, status, and personality, memorialize its dead? This fascinating study shows how members of the prominent Yu family passed down their personal and familial memories over five generations, through the traumatic transition from imperial to modern China and amidst the radical change and destruction of the nineteenth and twentieth centuries. Their memory writing is unusual and compelling for its quantity, variety, and resonance of themes across generations. It reflects a particular cultural moment and family, yet offers insight into universal practices of writing and remembrance. *Ink and Tears* begins and ends with the Yu family's two most famous members: the late Qing writer Yu Yue and his great-great grandson Yu Pingbo, each among the most famous and prolific scholars of their respective generations. Over a span of one and a half centuries, they and their lesser-known female and male kin made use of an impressive diversity of genres—poetry, prefaces, biographies, diaries, correspondence,

and strange tales—to preserve their family’s memories. During the times in which they wrote, the technologies of printing and the institutions of publication and book distribution were being transformed, and by the time of the great-grandchildren the language of education and governance, definitions of scholarship and literature, and the map of literary genres had all been remade. The Yus’ memory writing thus reveals not just how different family members remembered and mourned, but the changing tools they had with which to convey their loss. Drawing on a wealth of archival material, Rania Huntington focuses on questions of how memory was crafted, preserved, and transmitted as much as on what was remembered, tracing common tropes and shared strategies. Her beautifully observed study will interest scholars of late imperial and early Republican literature and history, as well as readers more broadly concerned with the family, women’s writing, themes of memory and bereavement, and the personal functions of literature.

Nanomineralogy Yiwen Ju ,Quan Wan ,Michael F. Hochella, Jr.,2020-12-14 In 2018, the International Symposium on Nanogeoscience was held in Guiyang, China. Scholars from around the globe gathered to discuss recent progress and development trends in various aspects of nanogeoscience, including nanomineralogy. Nanomineralogy, an important aspect of nanogeoscience, focuses on the composition, structure, and physical and chemical properties of nanoscale minerals and their interrelations with other Earth critical components. To give a sampling of the latest progress in nanomineralogy and related fields, we offer this Special Issue, which describes a full range of recent nanomineralogic achievements relating to everything from nanominerals and geochemistry, mineral nanostructures, and nanomineral deformation, to nanopores in oil and gas reservoirs, nanomineral deposits, and nanomineral material. Today, nanomineralogy faces a new strategic opportunity as well as a revolutionary challenge. We thus present this special nanomineralogy-focused issue of Minerals with the aim of encouraging our colleagues to familiarize themselves with current developments, trends, and directions in nanomineralogy, enabling an understanding of the potential of the field as a whole. We look forward to developing further scientific research and cooperation in nanomineralogy, hoping thereby to attract and guide young scholars to participate in this field.

The Chinese Army Today Dennis J. Blasko,2013-06-17 The Chinese Army Today is a comprehensive study of the Chinese military, examining its ground forces in a level of detail not found in any other contemporary works. This new, revised edition has been fully updated to take account of recent changes in the institution. In 1999, the military modernization program of the Chinese People’s Liberation Army increased in intensity and achieved a focus not seen in the previous two decades. Based primarily on actual Chinese sources, this book details these changes and puts them in the context of the many traditions that still remain. Written by a retired professional military officer who has served in China, the text uses first-hand observation of the Chinese military and three decades of military experience to weave many disparate threads from official Chinese statements, documents, and media reports into an integrated whole. The author also conducts an in-depth exploration into the many forces that constitute the People’s Liberation Army. This is an essential book for all students of Chinese military and security affairs, and highly recommended for students of Chinese Politics, Asian Security, and International Relations and Strategic Studies, in general.

Perspectives on Content-Based Multimedia Systems Jian Kang Wu,Mohan S. Kankanhalli,Joo-Hwee Lim,Dezhong Hong,2006-04-11 Multimedia data comprising of images, audio and video is becoming increasingly common. The decreasing costs of consumer electronic devices such as digital cameras and digital camcorders, along with the ease of transportation facilitated by the Internet, has lead to a phenomenal rise in the amount of multimedia data generated and distributed. Given that this trend of increased use of multimedia data is likely to accelerate, there is an urgent need for providing a clear means of capturing, storing, indexing, retrieving, analyzing and summarizing such data. Content-based access to multimedia data is of primary importance since it is the natural way by which human beings interact with such information. To facilitate the content-based access of multimedia information, the first step is to derive feature measures from these data so that a feature space representation of the data content can be formed. This can subsequently allow for mapping the feature space to the symbol space (semantics) either automatically or through human intervention. Thus, signal to symbol mapping, useful for any practical system, can be successfully achieved. Perspectives on Content-Based Multimedia Systems provides a comprehensive set of techniques to tackle these important issues. This book offers detailed solutions to a wide range of practical problems in building real systems by providing specifics of three systems built by the authors. While providing a systems focus, it also equips the reader with a keen understanding of the fundamental issues, including a formalism for content-based multimedia database systems, multimedia feature extraction, object-based techniques, signature-based techniques and fuzzy retrieval techniques. The performance evaluation issues of practical systems is also explained. This book brings together essential elements of building a content-based multimedia database system in a way that makes them accessible to practitioners in computer science and electrical engineering. It can also serve as a textbook for graduate-level courses.

Knowledge Sharing in Chinese Hospitals Lihong Zhou,José Miguel Baptista Nunes,2015-01-05 This book aims to identify, understand and qualify barriers to the patient-centred knowledge sharing (KS) in interprofessional practice of Traditional Chinese Medicine (TCM) and Western Medicine (WM) healthcare professionals in Chinese hospitals. This collaboration is particularly crucial and unique to China since, contrary to Western practice, these two types of professionals actually work together complimentary in the same hospital. This study adopted a Grounded Theory approach as the overarching methodology to guide the analysis of the data collected in a single case-study design. A public hospital in central China was selected as the case-study site, at which 49 informants were interviewed by using semi-structured and evolving interview scripts. The research findings point to five categories of KS barriers: contextual influences, hospital management, philosophical divergence, Chinese healthcare education and interprofessional training. Further conceptualising the research findings, it is identified that KS is mostly prevented by philosophical and professional tensions between the two medical communities. Therefore, to improve KS and reduce the effects of the identified barriers, efforts should be made targeted at resolving both types of tensions. The conclusion advocates the establishment of national policies and hospital management strategies

aimed at maintaining equality of the two medical communities and putting in place an interprofessional common ground to encourage and facilitate communication and KS.

The Treatment of Modern Western Medical Diseases with Chinese Medicine Bob Flaws,Philippe Sionneau,2001 This book is a textbook and clinical manual on the treatment of modern Western medical diseases with Chinese medicine. By modern Western medical diseases, we mean all the disease categories of Western medicine excluding gynecology and pediatrics. By Chinese medicine, we mean standard contemporary professional Chinese medicine as taught at the two dozen provincial Chinese medical colleges in the People's Republic of China. The two main therapeutic modalities used in the practice of this style of Chinese medicine are acupuncture-moxibustion and the internal administration of multi-ingredient Chinese medicinal formulas. Treatment plans for each disease discussed herein are given for each of these two main modalities.
