Notes on visits to the Horyuji Temple in Nara, Japan Bai Su, 2001

Hōryūji Reconsidered Dorothy C. Wong, Eric M. Field, 2008 Designated a UNESCO World Heritage site in 1993, the Hōryūji temple complex includes some of the oldest and largest surviving wooden buildings in the world. The original Hōryūji temple was built between 601 and 607 by Prince Regent Shōtoku (573?â 622), one of Japan's best-known cultural heroes. The construction of the temple marked the introduction of Buddhism and Buddhist art and architecture to Japan from China, by way of the Korean peninsula, as promoted by Prince Shōtoku. After a fire in 670 that destroyed the site, the temple was rebuilt and enlarged. Hōryūji became one of Japan's leading centers of Buddhist scholarship as well as a focus for the cult of its founder, Prince Shōtoku. This volume of essays originate from the 2005 The Dawn of East Asian International Buddhist Art and Architecture: Hōryūji (Temple of the Exalted Law) in Its Contexts symposium held at the University of Virginia in October 2005. Covering the disciplines of archaeology, architecture, architectural history, art history, and religion, these essays aim to shed new light on the Hōryūji complex by (1) examining new archaeological materials, (2) incorporating computer analysis of the structural system of the pagoda, and (3) including cross-cultural, interdisciplinary perspectives that reflect current research in various fields.

The Building of Horyu-ji Tsunekazu Nishioka, 2005

□,2016 Horyu-ji temple was first erected in the 7th century and has come down to us today in the magnificent form it achieved in 711, over 1,300 years ago. It has given lie to the common misconception that wood is destined to quickly rot and decay, and has demonstrated the enduring value of wood, not to mention the fact that the temple has been designated a World Heritage Site as the earth's oldest wooden structure. Here Tsunekazu Nishioka, the master carpenter who undertook the repair of this monumental structure in the mid 20th century, shares the insights and knowledge he gained from that experience. To make Nishioka's words and observations more easily understood by later generations, Jiro Kohara has buttressed them with scientific experiments and commentary, bringing into sharp view Hory-ji's long-concealed mysteries and secrets. The result is a revealing picture of Japan's immemorial love of trees and wood, a broad-ranging introduction to the country's wood culture. from back cover.

A World History of Architecture Marian Moffett, Michael W. Fazio, Lawrence Wodehouse, 2003
The Roman architect and engineer Vitruvius declared *firmitas*, *utilitas*, and *venustas*—firmness, commodity, and delight—to be the three essential attributes of architecture. These qualities are brilliantly explored in this book, which uniquely comprises both a detailed survey of Western architecture, including Pre-Columbian America, and an introduction to architecture from the Middle East, India, Russia, China, and Japan. The text encourages readers to examine closely the pragmatic, innovative, and aesthetic attributes of buildings, and to imagine how these would have been praised or criticized by contemporary observers. Artistic, economic, environmental, political, social, and technological contexts are discussed so as to determine the extent to which buildings met the needs of clients, society at large, and future generations.

Terrorism for Self-glorification Albert Borowitz,2005 In this timely study of the roots of terrorism, author Albert Borowitz deftly assesses the phenomenon of violent crime motivated by a craving for notoriety or self-glorification. He traces this particular brand of terrorism back to 356 BCE and the destruction of the Temple of Artemis at Ephesus by arsonist Herostratos and then examines similar crimes through history to the present time, detailing many examples of what the author calls the Herostratos Syndrome, such as the attempted explosion of the Greenwich Observatory in 1894, the Taliban's destruction of the giant Buddhas in Afghanistan, the assassination of John Lennon, the Unabomber strikes, and the attacks on the World Trade Center buildings. terrorism cannot be the exclusive focus of a single field of scholarship, Borowitz presents this complex subject using sources based in religion, philosophy, history, Greek mythology, and world literature, including works of Chaucer, Cervantes, Mark Twain, and Jean-Paul Sartre. Terrorism for Self-Glorification, written in clear and direct prose, is original, thorough, and thought provoking. Scholars, specialists, and general readers will find their understanding of terrorism greatly enhanced by this book.

Handbook of Materials for String Musical

Instruments Voichita Bucur, 2016-08-29 This book addresses core questions about the role of materials in general and of wood in particular in the construction of string instruments used in the modern symphony orchestra – violins, violas, cellos and basses. Further attention is given to materials for classical guitars, harps, harpsichords and pianos. While some of the approaches discussed are traditional, most of them depend upon new scientific approaches to the study of the structure of materials, such as for example wood cell structure, which is visible only using modern high resolution microscopic techniques. Many examples of modern and classical instruments are examined, together with the relevance of classical techniques for the treatment of wood. Composite materials, especially designed for soundboards could be a good substitute for some traditional wood species. The body and soundboard of the instrument are of major importance for their acoustical properties, but the study also examines traditional and new wood species used for items such as bows, the instrument neck, string pegs, etc. Wood species' properties for musical instruments and growth origins of woods used by great makers such as Antonio Stradivari are examined and compared with more recently grown woods available to current makers. The role of varnish in the appearance and acoustics of the final instrument is also discussed, since it has often been proposed as a 'secret ingredient' used by great makers. Aspects related to strings are commented. As well as discussing these subjects, with many illustrations from classical and

contemporary instruments, the book gives attention to conservation and restoration of old instruments and the physical results of these techniques.

There is also discussion of the current value of old instruments both for modern performances and as works of art having great monetary value. The book will be of interest and value to researchers, advanced students, music historians, and contemporary string instrument makers. Musicians in general, particularly those playing string instruments, will also find its revelations fascinating. It will also attract the attention of those using wood for a variety of other purposes, for its use in musical instruments uncovers many of its fundamental features. Professor Neville H. Fletcher Australian National University, Canberra

Cultural interaction between India and Japan in the fields of religion, language and literature, and art; a study.

The Meiji Restoration Robert Hellyer, Harald Fuess, 2020-05-07
In world history, the Meiji Restoration of 1868 ranks as a revolutionary watershed, on a par with the American and French Revolutions. In this volume, leading historians from North America, Europe, and Japan employ global history in novel ways to offer fresh economic, social, political, cultural, and military perspectives on the Meiji Restoration and the subsequent creation of the modern Japanese nation-state. Seamlessly mixing meta- and micro-history, the authors examine how the Japanese state and Japanese people engaged with global trends of the early nineteenth century. They also explore the internal military conflicts that marked the 1860s and the process of reconciliation after 1868. They conclude with discussions of how new political, cultural, and diplomatic institutions were created as Japan emerged as a

global nation, defined in multiple ways by its place in the world.

Conservation Practices in Museums Nobuyuki

Kamba,2022-02-02 The author introduces conservation science and management of cultural heritages in museums. In particular, a comprehensive conservation study and practical techniques are described. Aspects such as examination and diagnosis of cultural heritage by scientific data recording of humidity, luminosity, intensity of vibration and shock, among others, are introduced. Preventive and remedial

conservation with X-ray imaging and X-ray fluorescence and other risk-control methods are also explained. The author provides basic theories based on a scientific view for the methods introduced in this book. They can be compared with those used at other museums, and readers can employ them to adapt and improve their methods. Today, maintaining smooth internal communication is key for scientists and curators with different academic backgrounds and from different departments working together on conservation projects at the museum. The author addresses the current global trend of preserving rather than repairing cultural heritage at museums and emphasizes its importance.
