Hotchkiss Machine Guns John Walter,2019-11-28 Created by a long-forgotten Austrian nobleman, Adolf Odjekolek von Augezd, the air-cooled Hotchkiss machine gun was the first to function effectively by tapping propellant gas from the bore as the gun fired. Although the Hotchkiss would be overshadowed by the water-cooled Maxim and Vickers Guns, it proved its effectiveness during the Russo-Japanese War. The gun, quirky though it was, was successful enough to persuade Laurence Benét and Henri Mercié to develop the Modèle Portative: a man-portable version which, it was hoped, could move with infantrymen as they advanced. Later mounted on tanks and aircraft, it became the first automatic weapon to obtain a 'kill' in aerial combat. Though it served the French and US armies during World War I (and also the British in areas where French and British units fought alongside each other), the Odjekolek-Hotchkiss system was to have its longest-term effect in Japan. Here, a succession of derivatives found favour in theatres of operations in which water-cooling could be more of a liability than an asset. When US forces landed on Saipan, Guam and Iwo Jima, battling their way from island to island across the Pacific, it was the 'Woodpecker' - the Type 92 Hotchkiss, with its characteristically slow rate of fire - which cut swathes through their ranks. Supported by contemporary photographs and full-colour illustrations, this title explores the exciting and eventful history of the first successful gas-operated machine gun.

Complete Guide to the Hotchkiss Machine Gun An Instructor,2012-03-29 The French designed Hotchkiss machine gun was officially adopted by the British Army as a light machine gun to serve alongside the Lewis gun. However, the Lewis went to infantry units, whilst the Hotchkiss was issued to cavalry and armoured units. This book is extremely well illustrated with photographs and line drawings, covering all aspects of the weapon. The gun is described completely, and anyone who has read the pamphlet will be able to use a Hotchkiss gun. The interesting feed mechanism is shown in the photographs as is the ammunition strip and its box. Care and cleaning are prescribed so that the weapon remained able to fire under all conditions. There is also detailed instruction on all possible stoppages and the immediate action to clear such problems. An important section in this book gives a tactical insight into the use of the weapon as experienced during the First World War and shows how machine guns should be viewed in the mind of the user.

Soviet Armoured Cars 1936-45 Jamie Prenatt,2020-10-29 The armoured car has an important place in the early history of Soviet armoured fighting vehicles (AFVs) - they were the most important AFV during the Russian Civil War and figured prominently in the mechanization of the Red Army that began in late 1929. The 1930s saw the development and production of a wide variety of armoured cars, which were used extensively in Soviet conflicts from then on. They saw service in the Spanish Civil War, in the 1939 Manchurian conflict with Japan, and in the occupation of the Baltic states and the invasion of Poland and Finland. Although many of its armoured cars were lost in the early months following the German invasion in June 1941, Russia continued with its armoured car development program, and the final model, the BA-64, was accepted for service in 1942 with over 9,000 built before production ended in 1946. This detailed book provides a survey of Russian armoured cars from 1936 to 1945, focusing on the history, design, and specifications of the wheeled armoured cars that entered series production, including the rail variants and tracked BA-30. Packed with photographs, cross-sections, and stunning battleplates, this is a comprehensive guide to some of the Red Army's fastest AFVs.

The Tanks of Operation Barbarossa Boris Kavalerchik,2018-05-30 An absorbing study of the tanks and the tank tactics of the Red Army and the Wehrmacht during the Axis invasion of the Soviet Union in World War II. When the Germans invaded the Soviet Union in 1941, the Red Army had four times as many tanks as the Wehrmacht and their tanks were seemingly superior, yet the Wehrmacht won the border battles with extraordinary ease. The Red Army's tank force was pushed aside and for the most part annihilated. How was this victory achieved, and were the Soviet tanks really as well designed as is often believed? These are the basic questions Boris Kavalerchik answers in this compelling study of tank warfare on the Eastern Front. Drawing on technical and operational documents from Russian archives, many of which were classified until recently and are unknown to Western readers, he compares the strengths and weakness of the tanks and the different ways in which they were used by the opposing armies. His work will be essential reading for military historians who are interested in the development of armored warfare and in this aspect of the struggle on the Eastern Front. "So much has been written on this subject, and yet this book dispels myths and offers fresh insights in a study of Soviet and German tanks at the beginning of the war on the Eastern Front . . . a fascinating selection of images."—Firetrench "This book is highly recommended due to the excellent use of data, the organization of the book established by the author, and thoughtful and comprehensive coverage of the subject."—IPMS/USA

Russian Motor Vehicles Maurice A. Kelly,2009-07 There has been nothing published outside of Russia concerning the activities of its motor industry, by 1937 the Soviets had become the largest producers of motor vehicles in Europe, albeit with the help of Henry Ford The author decided to concentrate on the work of the pioneers in Czarist Russia, for their efforts were more diverse than those of their counterparts in the Soviet era. However, one Soviet motor car which was an indigenous product has been included to illustrate how the industry might have evolved if Henry Ford had not been approached. This is a comprehensive overview of all facets of vehicle production from the early days to the final demise of the Soviet Union. All the manufacturers of motor vehicles, certain accessories, military machines, and even aero engines are recorded in this unique book.
