20 Fun Facts About Centipedes Matthew Elkin,2013-01-01 Most people are familiar with the common house centipede. This long-legged bug is often found hiding in dark closets and damp basements. However, the house centipede is just one of many kinds of centipedes living all over the world. Centipedes come in many sizes and colors, but they all have one thing in common—lots of legs. Readers will enjoy the informative and engaging text paired with brilliant photographs of the world's most interesting centipedes.

Centipedes Kristin Petrie,2008-08-15 Centipedes are some of the world's most fascinating bugs! This book's easy-to-read text and larger-than-life color photos bring the centipede's world to life, introducing readers to a centipede's diet, habitat, enemies, and methods of defense. Diagrams help readers investigate the concept of metamorphosis and identify body parts, from the centipede's poisonous fangs to its many legs. The digestive, respiratory, and circulatory systems are also described. A step-by-step approach to scientific classification helps place centipedes within the class Chilopoda. Readers are also encouraged to consider the benefits and drawbacks of centipedes, as well as how they impact our daily lives. From house centipedes to tiger centipedes, young entomologists will enjoy uncovering the lives of these amazing creatures. Informative sidebars and Bug Bytes aim to peak readers' interest, while bolded glossary terms, phonetic spellings, and an index enhance readability. Centipedes, Millipedes, Sowbugs and Pillbugs ,2010

Houses Under the Sea Caitlín R. Kiernan,2019 Since H.P. Lovecraft first invited colleagues such as Frank Belknap Long and Robert Bloch (among others) to join in his creation of what has come to be known as 'The Cthulhu Mythos' (over Lovecraft's less invocative name of 'Yog-Sothery'), dozens of authors have tried their hand at adding to this vast tapestry with varying degrees of success. Some, like the then teen-aged Ramsey Campbell, used the Mythos as a starting point to his own career while still finding his own authorial voice (The Inhabitant of the Lake and Less Welcome Tenants, Arkham House 1964); others, like Stephen King and Neil Gaiman, did so at the height of their careers, paying homage to an author who had been such a tremendous inspiration to them. But no one, absolutely no one, has contributed such a body of brilliant and profoundly original work to the Mythos as has Caitlín R.

Kiernan. In this remarkable collection the author has selected over two dozen of her best Lovecraftian tales ranging from 2000s *Valentia* to her more recent classic *A Mountain Walked* as well as including the complete Dandridge Cycle, as well as a new story, *M Is for Mars*. In short, this is a cornerstone volume for Kiernan fans and Mythos devotees alike.

What's Bugging You? Arthur V. Evans, 2008 We are told from the time we are children that insects and spiders are pests, when the truth is that most have little or no effect on us--although the few that do are often essential to our existence. Arthur Evans suggests we take a closer look at our slapped-at, stepped-on, and otherwise ignored cohabitants, who vastly outnumber us and whose worlds often occupy spaces that we didn't even know existed. *What's Bugging You?* brings together fifty unforgettable stories from the celebrated nature writer and entomologist's popular Richmond Times-Dispatch column. Evans has scoured Virginia's wild places and returned with wondrous stories about the seventeen-year sleep of the periodical cicadas, moths that evade hungry bats by sensing echolocation signals, and the luminous language of light employed by fireflies. He also visits some not-so-wild places: the little mounds of upturned soil scattered along the margins of soccer fields are the dung beetle's calling card. What does the world look like to a bug? Evans explores insect vision, which is both better, and worse, than that of humans (they are capable of detecting ultraviolet light, but many cannot see the color red), pausing to observe that it is its wide-set forward-looking eyes that imbue the praying mantis with personality. He is willing to defend such oft-maligned creatures as the earwig, the tent caterpillar, and the cockroach--revealed here as a valuable scavenger, food source for other animals, and even a pollinator, that spends more time grooming itself than it does invading human space. Evans's search for multilegged life takes him to an enchanting assortment of locations, ranging from gleaming sandy beaches preferred by a threatened tiger beetle to the shady, leaf-strewn forest floors where a centipede digs its brood chamber--to a busy country road where Evans must dodge constant foot and vehicular traffic to photograph a spider wasp as it claims its paralyzed prey. His forays also provide the reader with a unique window on the cycles of nature. What Evans refers to as the FBI--fungus, bacteria, insects--are the chief agents in decomposition and a vital part of regeneration. Evans also takes on many issues concerning humans' almost always destructive interaction with insect life, such as excessive mowing and clearing of wood that robs wildlife of its food and habitat, as well as harmful bug zappers that kill everything but mosquitoes. The reader emerges from this book realizing that even seemingly mundane forms of insect and spider life present us with unexpected beauty and fascinating lifestyles.
