M7 Priest 105mm Howitzer Motor Carriage Steven J. Zaloga,2013-07-20 Based upon the ubiquitous Grant/Sherman tank, the M7 Priest is the iconic Allied self-propelled howitzer. It was the most widely manufactured vehicle of its type in World War II and was utilized by the US, British, Canadian and Free French forces. Its combat debut was with Montgomery's Eighth Army at El Alamein and it fought subsequently in every major campaign through Sicily, Italy, Normandy and the final battles in Germany. In addition to covering all variants of the Priest, this book also looks at the major derivatives, including the British/Canadian Sexton and the US M12 155mm GMC.

M40 Gun Motor Carriage and M43 Howitzer Motor Carriage in WWII and Korea David Doyle,2017-10-18 The M40 Gun Motor Carriage and M43 Howitzer Motor Carriage are featured in over 200 photographs, providing a detailed study of the conception, development, testing, and combat use of these key vehicles. As the US entered WWII, the nation lacked heavy self-propelled artillery, instead relying heavily on towed artillery, much of it WWI-surplus. Only 100 examples of the nation's first heavy self-propelled gun, the M12, were built. Finding favor once deployed, attention was turned to developing an improved model. Initially designated the T83, and later as the M40, the new 155mm Gun Motor Carriage was first fielded in the closing months of WWII. Already scheduled for mass production, the M40, and its companion 8-inch howitzer-armed M43, continued to see extensive use during the Korean War, providing crucial support to infantry and armor formations. Historic period images, as well as, meticulously photographed surviving examples, provide a detailed look at this important piece of US military hardware.

Service of the Piece 105-MM Howitzer Motor Carriage M7 Priest Field Manual: FM 6-74

War Department,2013-09 The 105-mm Howitzer Motor Carriage M7 was an American self-propelled artillery vehicle produced during World War II. It was called the Priest by the British Army, due to the pulpit-like machine gun ring. The first M7s produced were modified M3 Lee medium tanks. The M7 went through a fairly rapid shift from being based on the M3, to having more in common with the M4 Sherman. The first major example was an adoption of the M4's three piece housing, single piece casting and suspension. In British service, some M7s carried a radio set, which took the place of twenty-four rounds of ammunition. In U.S. service, the M7 was a resounding success. During the Battle of the Bulge, each U.S. armored division had three battalions of M7s, giving them unmatched mobile artillery support. A total of 3,490 M7s were built and they proved to be reliable, continuing to see service in the U.S. and allied armies well past World War II. Created in 1944, this field manual reveals a great deal about the Priest's design and capabilities. The manual prescribes the duties to be performed in the service of the M7, by firing battery personnel. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.

Stuart Tank Vol. 2 David Doyle,2019-10-28 The Stuart light tanks were the first tanks taken into combat by US troops during WWII. Production of these vehicles can be broken into two categories: the early tanks powered by air-cooled radial engines, and late vehicles powered by twin V-8 engines. This volume explores the late vehicles with Cadillac water-cooled engines, the M5 and M5A1, as well as the M8 Howitzer Motor Carriage. Widely used by both the US Army and US Marines, as well as many Allied nations, these tanks, though lightly armed and armored, were mechanically sound and were widely used by US forces in Europe and the Pacific, as well as by Allied nations. Through dozens of archival photos, including previously unpublished images, as well as detailed photographs of some of the finest existing examples of these vehicles, this early-war combat vehicle is explored, and its history is explained. A companion volume explores the early M3, M3A1, and M3A3 versions.

M7 Priest David Doyle,2018-12 The M7 Howitzer Motor Carriage, dubbed the Priest, was the most

successful and widely used example of American self-propelled artillery during WWII. Examples continued to be used by the U.S. Army during the Korean war, and beyond, even serving Allied countries into the 1970s. Coined the Priest due to its pulpit-like structure for the gun commander, this armored fighting vehicle would see action in North Africa, Italy, and the D-Day landings in Normandy and all the way to Germany.

War Department Technical Manual ,1940

M12 Gun Motor Carriage David Doyle,2018-10-30 Although only 100 examples were produced, the 155mm Gun Motor Carriage M12 served with distinction as an infantry-support weapon and in particular as a bunker-buster during the U.S. assault on the Siegfried Line in the winter of 1944-45. The ability to rapidly ready heavy artillery for firing lead to the development of the M12 155mm gun in 1941, based on the M3 Medium Tank chassis. The trial vehicle, built by Rock Island Arsenal, was designated T6. To accommodate the large, rear mounted weapon - a French-made M1917 155mm gun, the engine was relocated forward to a position just behind the driving compartment. A hydraulically operated spade mounted at the rear of the vehicle, which was lowered during firing to anchor the vehicle against the recoil. When retracted into the travelling position it provided a seat for two of the six crewmen. The production run was between September 1942 and March 1943, with a total of one hundred units being built. Though a few were used by training units, most were placed in storage until February 1944, when the first of 74 of them were shipped to Baldwin Locomotive Works to be improved based on further tests and usage in training. This work continued until May 1944. Three slightly different WWI surplus weapons were mounted depending upon availability, the M1917, the M1917A1 and the M1918M1. The M1917 was French built, the M1918 was US built, and the M1917A1 had the French gun tube, and the US breech. The M12 would earn the nickname Door Knocker for its pounding of the German Siegfried Line.

Tm9-1729c Ordnance Maintenance Light Tank M24 Chaffee: And 155-MM Howitzer Motor Carriage M41 Technical Manual War Department,2013-05-07 The Light Tank M24 was an American tank used during the later part of World War II and in postwar conflicts including the Korean War and, with the French, in the War in Algeria and the First Indochina War. In British service it was given the service name Chaffee, after the United States Army General Adna R. Chaffee, Jr., who helped develop the use of tanks in the United States armed forces. In April 1943, the Ordnance Corps, together with Cadillac division of General Motors, started work on the new project, designated Light Tank T24. Every effort was made to keep the weight of the vehicle under twenty tons. The armor was kept light, with the glacis plate only twenty five mm thick (but sloped at sixty degrees from the vertical). A new lightweight 75 mm gun was developed, a derivative of the gun used in the B-25H Mitchell bomber. The gun had the same ballistics as the M3, but used a thinly walled barrel and different recoil mechanism. The design also featured wider (sixteen inch) tracks and torsion bar

suspension. It had a relatively low silhouette and a three-man turret. On October 15, 1943 the first pilot vehicle was delivered and production began in 1944 under the designation Light Tank M24. By the time production was stopped in August 1945, 4,731 M24s had left the assembly lines. The M41 155-mm Howitzer Motor Carriage was based on the M24 Chaffee Light Tank fitted with an M1 155-mm Howitzer. In addition to the Howitzer, the M41 carried twenty two rounds of 155-mm ammunition. Also known as the Gorilla, the M41 eventually saw action in Korea. Created in 1947, this technical manual reveals a great deal about both the Chaffee's and M41's design and capabilities. Intended as a manual for those charged with maintenance, it details many aspects of the Chaffee's track and suspension, hull, turret and other systems. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.
