Indian Aircraft Industry: Possible Invention for Success in the Twenty First Century Group Captain Vivek Kapur,2017-09-15 India's Aircraft Industry, despite having been formed as early as in December 1940 has been unable to meet the equipment needs of the aviation users, whether military or civil, in the country. As a consequence India imports all its aircraft needs from abroad. This situation needs to change. This book starts from an examination of the importance of aviation to the country both for military as well as or civil purposes. From here it goes on to trace the development of aviation in India. Then the book examines the Indian Aircraft Industry from studying the aircraft projects carried out by India. From these aircraft projects lessons and learning have been culled for use later in the book. Thereafter there are case studies carried out of the two leading airpower capability countries, the USA and erstwhile Soviet Union / Russia. There are also case studies of Brazil and China as these two countries were behind India in aviation in the 1950s but are globally competitive today, unlike India. The lessons and learning from the case studies are compiled and then used finally to develop possible models that could help make India's aircraft industry globally competitive.

Encyclopedia of African Airlines Ben R. Guttery,1998 The rainy season, terrain, and financial hardships have made the construction of highways and railroads nearly impossible in many parts of Africa. This lack of modern infrastructure has been overcome in some part by the development of air transportation. Hundreds of carriers--both small and large, government owned and private--have connected all parts of the continent. Together, they have had a tremendous impact on the African economy and the people. Country-by-country, this comprehensive reference work provides brief histories of over 700 airlines in 54 African nations. Each entry has the years of operation of the carrier, along with information on its origin, growth, and route structure. Aircraft usage, including registration numbers and nicknames, is covered in many cases. Any crashes involving aircraft in the carrier's fleet are also noted. An appendix gives the location of all major African airports.

Howard Hughes George J Marrett,2016-05-15 George J. Marrett, a former test pilot for aviator Howard Hughes, separates fact from fiction to tell the inside story of the genius who set flight speed records in the 1930s and went on to develop some of America's most famous aircraft and weapons. The author draws on his wealth of experiences and those of other Hughes confidants to take readers inside Hughes's complex and clandestine world. Marrett integrates stories of Hughes the ace pilot with Hughes the designer and businessman who became America's first billionaire.

A Compendium of Armaments and Military Hardware (Routledge Revivals) Christopher Chant,2014-06-03 First published in 1987, The Compendium of Armaments and Military Hardware provides, within a single volume, the salient technical and operational details of the most important weapons. The complete range of hardware used in land, sea and air forces throughout the world at the time of publication is covered, from tanks to rocket systems, helicopters to cruise missiles, alongside full details of size, weight and operational range. The book's main strength lies in the detail it gives of armament and associated ammunition capabilities, and of the sensors and other electronics required for the weapons to be used effectively. A key title amongst Routledge reference reissues, Christopher Chant's important work will be of great value to students and professionals requiring a comprehensive and accessible reference guide, as well as to weapons 'buffs'.
